experiences but also upon an individual's personality, social support and emotional response to migration. Socio-demographic factors such as age, gender, educational and economic status will all play a role in post migration adjustment. In order to understand the impact on individuals not only the type of migration and different stressors but also the types of psychological mechanisms at a personal level and the resources and processes at a societal level need to be explored. Despite the number of refugees and asylum seekers around the world increasing at an astonishing rate the mental health needs of migrants are often ignored by policy makers and clinicians. The Oxford Textbook of Migrant Psychiatry is designed to serve as the comprehensive reference resource on the mental health of migrants bringing together both theoretical and practical aspects of the mental health needs of refugees and asylum seekers for researchers and professionals. Individual chapters summarise theoretical constructs related to theories of migration, the impact of migration on mental health and adjustment, collective trauma, individual identity and diagnostic fallacies. The book also covers the practical aspects of patient management including cultural factors, ethnopsychopharmacology, therapeutic interaction and therapeutic expectation and psychotherapy. Finally, the book will examine special clinical problems and special patient groups. Part of the authoritative Oxford Textbooks in Psychiatry series, this resource will serve as an essential reference for psychiatrists, mental health professionals, general practitioners, primary care physicians, social workers, policy makers and voluntary agencies dealing with refugees and asylum seekers.
