**The California Deserts** Bruce M Pavlik, 2008-07-02 This highly readable spectacularly illustrated compendium is an ecological journey into a wondrous land of extremes The California Deserts explores the remarkable diversity of life in this harsh yet fragile quarter of the Golden State In a rich narrative it illuminates how that diversity created by drought and heat has evolved with climate change since the Ice Ages Along the way we find there is much to learn from each desert species whether it is a cactus pupfish tortoise or bighorn sheep about adaptation to a warming arid world The book tells of human adaptation as well and is underscored by a deep appreciation for the intimate knowledge acquired by native people during their 12 000 year desert experience In this sense the book is a journey of rediscovery as it reflects on the ways that knowledge has been reclaimed and amplified by new discoveries The book also takes the measure of the ecological condition of these deserts today presenting issues of conservation management and restoration With its many sidebars photographs and featured topics The California Deserts provides a unique introduction to places of remarkable and often unexpected beauty

**Structure and Function of a Chihuahuan Desert Ecosystem** Kris M. Havstad, Laura F. Huenneke, William H. **The Biology of Deserts** David Ward, 2016-06-16 This book offers a concise but comprehensive introduction to desert ecology and adopts a strong evolutionary focus As with other titles in the Biology of Habitats Series the emphasis in the book is on the organisms that dominate this harsh environment although theoretical and experimental aspects are also discussed In this updated second edition there is a greater focus on the effects of climate change and some of its likely effects on deserts seeing desertification as among the most serious results of climate change leading ultimately to the increasing size of arid and semi arid regions The Biology of Deserts Second Edition includes a wide range of ecological and evolutionary issues including morphological and physiological adaptations of desert plants and animals species interactions the importance of

predation and parasitism food webs biodiversity and conservation It features a balance of plant and animal both invertebrate and vertebrate examples and also emphasizes topical applied issues such as desertification and invasive species The book concludes by considering the positive aspects of desert conservation This accessible textbook is intended for senior undergraduate and graduate students as well as professional ecologists conservation practitioners and resource managers working in the field of desert ecology

*A History of Radioecology* Patrick C. Kangas, 2022-12-26 This book presents a history of radioecology from World War II through to the critical years of the Cold War finishing with a discussion of recent developments and future implications for the field Drawing on a vast array of primary sources the book reviews synthesizes and discusses the implications of the ecological research supported by the Atomic Energy Commission AEC of the United States government from World War II to the early 1970s This was a critical period in the history of ecology characterized by a transition from the older largely descriptive studies of communities of plants and animals to the modern form of the science involving functional studies of energy flow and mineral cycling in ecosystems This transition was in large part due to the development of radioecology which was a by product of the Cold War and the need to understand and predict the consequences of a nuclear war that was planned but has never occurred The book draws on important case studies such as the Pacific Proving Grounds the Nevada Test Site El Verde in Puerto Rico the Brookhaven National Laboratory and recent events such as the nuclear disasters at Chernobyl and Fukushima By revisiting studies and archived information from the Cold War era this book offers lessons from the history of radioecology to provide background and perspective for understanding possible present day impacts from issues of radiation risks associated with nuclear power generation and waste disposal Post Cold War developments in radioecology will be also reviewed and contrasted with the AEC supported ecology research for further perspectives This book will be of great interest to students and scholars of radioecology environmental pollution environmental technology bioscience and environmental history

*Biodeterioration of Wooden Cultural Heritage* Anastasia Pournou, 2020-10-27 Since prehistoric times and throughout the course of human evolution, wood has been an integral part of all civilizations. Wooden Cultural Heritage can be found worldwide, providing valuable information on the social and economic context of human history. Nonetheless, as a natural cellulosic material, wood shows low resistance to biodeterioration and thus wooden Cultural Heritage often fails to escape decomposition in both aquatic and terrestrial ecosystems. This book provides a comprehensive overview on the biodeterioration of wooden Cultural Heritage and describes the decay mechanisms of key organisms and microorganisms encountered in aquatic and terrestrial ecosystems. Cultural Heritage professionals, researchers and academics may explore within this book the associations between deteriorogens, habitats and decay, which will assist them to understand wood biodeterioration and design effective prevention, mitigation and remediation strategies. The book presents case studies around the world to demonstrate the impact of biogenic deterioration on wooden Cultural Heritage and illustrates mechanisms and patterns in order to be a useful handbook of decay diagnosis. Lastly, by adopting a holistic approach to wood decay, basic concepts of wood technology, ecology and deteriorogens biology are introduced, permitting readers of different scientific backgrounds to easily comprehend wood biodeterioration.

Governing Global Desertification Pierre Marc Johnson, 2016-12-05 Desertification affects 70 per cent of the world's arable lands in more than 100 countries. Inextricably linked to poverty, it is estimated that the livelihood of 250 million people are directly affected while another billion living in rural drylands are threatened by this phenomenon. This volume examines the United Nations Convention to Combat Desertification (UNCCD) signed in 1994. It studies the links between land degradation and poverty, the role of civil society and good governance in implementing the UNCCD and the various approaches to fighting desertification. Furthermore, it assesses the National Action Programmes, development planning and new avenues for strengthening implementation. Synthesizing the main strengths and weaknesses of the UNCCD as a tool for environmental and developmental governance, this informative volume highlights the main challenges facing the UNCCD in the future.

**Concealing Coloration in Animals** Judy Diamond, 2013-04-09 Color can attract mates, intimidate enemies and distract predators. But it can also conceal animals from detection. It is an adaptation to the visual features of the environment but also to the perceptual and cognitive capabilities of other organisms. Judy Diamond and Alan Bond reveal factors at work in the evolution of concealing coloration.

*Biodiversity in Drylands* Moshe Shachak, 2005 The first volume in the Long Term Ecological Research Network series, this book summarizes the state of knowledge about biodiversity in drylands and seeks to identify questions and strategies for future research and to lay out guidelines for management of biodiversity in desert and semi-desert regions.
