Data Analysis V Michael R. Berthold, Hans-Joachim Lenz, Elizabeth Bradley, Rudolf Kruse, Christian Borgelt, 2011-03-16 We are glad to present the proceedings of the 5th biennial conference in the Intelligent Data Analysis series The conference took place in Berlin Germany August 28 30 2003 IDA has by now clearly grown up Started as a small si symposium of a larger

conference in 1995 in Baden Baden Germany it quickly attracted more interest both submission and attendance wise and moved from London 1997 to Amsterdam 1999 and two years ago to Lisbon Submission rates along with the ever improving quality of papers have enabled the organizers to assemble increasingly consistent and high quality programs This year we were again overwhelmed by yet another record breaking submission rate of 180 papers At the Program Chairs meeting we were based on roughly 500 reviews in the lucky position of carefully selecting 17 papers for oral and 42 for poster presentation Poster presenters were given the opportunity to summarize their papers in 3 minute spotlight presentations The oral spotlight and poster presentations were then scheduled in a single track 2 5 day conference program summarized in this book In accordance with the goal of IDA to bring together researchers from diverse disciplines we achieved a nice balance of presentations from the more theoretical side both statistics and computer science as well as more application oriented areas that illustrate how these techniques can be used in practice Work presented in these proceedings ranges from theoretical contributions dealing for example with data cleaning and compression all the way to papers addressing practical problems in the areas of text classification and sales rate predictions A considerable number of papers also center around the currently so popular applications in bioinformatics

Metaphysics and Cognitive Science Alvin I. Goldman, Brian P. McLaughlin, 2019-03-27 This volume illustrates how the methodology of metaphysics can be enriched with the help of cognitive science Few philosophers nowadays would dispute the relevance of cognitive science to the metaphysics of mind but this volume mainly concerns the relevance of metaphysics to phenomena that are not themselves mental The volume is thus a departure from standard analytical metaphysics Among the issues to which results from cognitive science are brought to bear are the metaphysics of time of morality of meaning of modality of objects and of natural kinds as well as whether God exists A number of chapters address the enterprise of metaphysics in general In traditional analytical metaphysics intuitions play a prominent role in the construction of and assessment of theories Cognitive science can be brought to bear on the issue of the reliability of intuitions Some chapters point out how results from cognitive science can be deployed to debunk certain intuitions and some point out how results can be deployed to help vindicate certain intuitions Many metaphysicians have taken to heart the moral

that physics should be taken into account in addressing certain metaphysical issues The overarching point of the volume is that in many instances beyond the nature of the mind itself cognitive science should also be consulted *The Palgrave International Handbook of Women and Outdoor Learning* Tonia Gray, Denise Mitten, 2018-05-12 This Handbook serves as a starting point for critical analysis and discourse about the status of women in outdoor learning environments OLEs Women choose to participate actively in outdoors careers many believing the profession is a level playing field and that it offers alternatives to traditional sporting activities They enter outdoor learning primarily on the strength of their enthusiasm for leading and teaching in natural environments and assume the field is inclusive rewarding excellence regardless of age gender socioeconomic status disability or ethnicity However both research and collective experiences in OLEs suggest that many women feel invisible relegated marginalized and undervalued In response to this marginalization this Handbook celebrates the richness of knowledge and practices of women practitioners in OLEs Women scholars and practitioners from numerous fields such as experiential outdoor education adventure education adventure therapy and gender studies explore the implications of their research and practice using poignant examples within their own disciplines These insights emerge from similar life experiences as women and outdoor leaders in the 1970s to the present Social inequalities still abound in OLEs and the Handbook ensures that the contributions of women are highlighted as well as the work that needs to be done to make these spaces inclusive Global in perspective and capacious in content this one stop volume is an indispensable reference resource for a diverse range of academics including students and researchers in the fields of education psychology sociology gender studies geography and environment studies as well as the many outdoors fields **Energy: Wind** Donald Marples, Molly Sherlock, 2010-05-11 Since early recorded history people have been harnessing the energy of the wind In the United States in the late 19th century settlers began using windmills to pump water for farms and ranches and later to generate electricity for homes and industry Industrialism led to a gradual decline in the use of windmills The steam engine replaced European water pumping windmills and in the 1930s the Rural Electrification Administration s programs brought inexpensive electric power to most rural areas in the United States However industrialization also sparked the development of larger windmills wind turbines to generate electricity *LATIN 2002: Theoretical Informatics* Sergio Rajsbaum, 2003-07-31 This book constitutes the refereed proceedings of the 5th International Symposium Latin American Theoretical Informatics LATIN 2002 held in Cancun Mexico in April 2002 The 44 revised full papers presented together with a tutorial and 7 abstracts of invited contributions were carefully reviewed and selected from a total of 104 submissions The papers presented are devoted to a broad range of topics from theoretical computer science and mathematical foundations with a certain focus on algorithmics and computations related to discrete structures
