Wallace, 2002-09-26 Provides a unique treatment of world economic geography as a whole and examines the principle philosophies that have shaped our study of it identifies the importance of the biophysical as well as cultural and political environments The Red and the Green Frederic L. Pryor, 2014-07-14 Reorganizing the agricultural sector into large scale state and collective farms was the most radical transformation of economic institutions implemented by Marxist governments Frederic Pryor provides perspective on this unique experiment by comparing in a systematic and original fashion the changes in the organization of agriculture in all of the world's Marxist nations This approach allows not only a clearer understanding of the major lines of agricultural policy and organization in these nations but also a keener insight into the reasons underlying the variations among them What have been the doctrinal elements that have led to collectivization Why has the process of collectivization been so different in various nations How have the farms been organized both internally and within the larger economy How has the performance of agriculture differed between the various Marxist nations and comparable capitalist nations And what are the difficulties in reversing collectivization and moving back toward private agriculture In answering these questions The Red and the Green draws on a vast number of primary and secondary sources from many nations as well as from extensive interviews with farmers agricultural officials and specialists in more than a dozen Marxist nations Among books dealing with problems of communist economy this study is unrivaled in its broad scope combined with careful institutional and statistical analysis Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the

Allen, 2021-07-13 To say that history s greatest economic experiment Soviet communism was also its greatest economic failure is to say what many consider obvious Here in a startling reinterpretation Robert Allen argues that the USSR was one of the most successful developing economies of the twentieth century He reaches this provocative conclusion by recalculating national consumption and using economic demographic and computer simulation models to address the what if questions central to Soviet history Moreover by comparing Soviet performance not only with advanced but with less developed countries he provides a meaningful context for its evaluation Although the Russian economy began to develop in the late nineteenth century based on wheat exports modern economic growth proved elusive But growth was rapid from 1928 to the 1970s due to successful Five Year Plans Notwithstanding the horrors of Stalinism the building of heavy industry accelerated growth during the 1930s and raised living standards especially for the many peasants who moved to cities A sudden drop in fertility due to the education of women and their employment outside the home also facilitated growth While highlighting the previously underemphasized achievements of Soviet planning Farm to Factory also shows through methodical analysis set in fluid prose that Stalin's worst excesses such as the bloody collectivization of agriculture did little to spur growth Economic development stagnated after 1970 as vital resources were diverted to the military and as a Soviet leadership lacking in original thought pursued wasteful Politics or Markets? Mats Lundahl, 2002-01-31 First published in 1992 Routledge is an imprint of Taylor investments Francis an informa company Faulty Foundations Holland Hunter, Janusz M. Szyrmer, 2014-07-14 Could the USSR have been prepared for World War II more humanely and efficiently In this first integrated evaluation of Stalin's economic goals and actions Holland Hunter and Janusz Szyrmer reconstruct and test Soviet results annually and by sector Addressing historians political scientists and economists the authors build a new internally consistent twelve sector annual record of output and capital growth assembling and reconciling Western reconstructions of Soviet data to assess Soviet policy and test how alternative policies might have worked They point out lessons from the 1930s that can be applied today The authors analyze the basic steps marking the prewar Soviet drive agricultural collectivization head long investment in heavy industry autarkic foreign trade and rearmament They conclude that the economy s growth potential was misused that collectivization was a mistake and that with a slower drive to build heavy industry living standards could have been higher throughout the 1930s while the ability to withstand invasion would have been stronger A related implication for the 1990s is that correct prices small scale production and individual initiative are key requirements for an effective Soviet economy Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the
