availability Information technology deeply affects the confidential relationship between patient and doctor since it increasingly surrounds and mediates it Information systems in health care establishments are increasingly developing towards an integrated system where various users can interact and communicate The process of integration will cross the borders of local health care establishments and it will progressively expand e g into patients homes into a European health care community in order to support the mobility of patients the exchange of medical and administrative data transfer of bills and money

**Augmented Reality** Andrew Yeh Ching Nee, 2011-12-09 Augmented Reality AR is a natural development from virtual reality VR which was developed several decades earlier AR complements VR in many ways Due to the advantages of the user being able to see both the real and virtual objects simultaneously AR is far more intuitive but it is not completely detached from human factors and other restrictions AR doesn't consume as much time and effort in the applications because it is not required to construct the entire virtual scene and the environment In this book several new and emerging application areas of AR are presented and divided into three sections The first section contains applications in outdoor and mobile AR such as construction restoration security and surveillance The second section deals with AR in medical biological and human bodies The third and final section contains a number of new and useful applications in daily living and learning
