*Fundamentals of Modern Manufacturing* Mikell P. Groover, 2015-11-23 *Fundamentals of Modern Manufacturing Materials Processes and Systems* 6th Edition is designed for a first course or two course sequence in Manufacturing at the junior level in Mechanical Industrial and Manufacturing Engineering curricula As in preceding editions the author's objective is to provide a treatment of manufacturing that is modern and quantitative The book's modern approach is based on balanced coverage of the basic engineering materials the inclusion of recently developed manufacturing processes and comprehensive coverage of electronics manufacturing technologies The quantitative focus of the text is displayed in its emphasis on manufacturing science and its greater use of mathematical models and quantitative end of chapter problems This text is an unbound three hole punched version *Rational Machines and Artificial Intelligence* Tshildzi Marwala, 2021-03-31

Intelligent machines are populating our social economic and political spaces These intelligent machines are powered by Artificial Intelligence technologies such as deep learning They are used in decision making One element of decision making is the issue of rationality Regulations such as the General Data Protection Regulation GDPR require that decisions that are made by these intelligent machines are explainable *Rational Machines and Artificial Intelligence* proposes that explainable decisions are good but the explanation must be rational to prevent these decisions from being challenged Noted author Tshildzi Marwala studies the concept of machine rationality and compares this to the rationality bounds prescribed by Nobel Laureate Herbert Simon and rationality bounds derived from the work of Nobel Laureates Richard Thaler and Daniel Kahneman *Rational Machines and Artificial Intelligence* describes why machine rationality is flexibly bounded due to advances in technology This effectively means that optimally designed machines are more rational than human beings Readers will also learn whether machine rationality can be quantified and identify how this can be achieved Furthermore the author discusses whether machine rationality is subjective Finally the author examines whether a population of intelligent machines collectively make more rational decisions than individual machines Examples in biomedical engineering social sciences and the financial sectors are used to illustrate these concepts Provides an introduction to the key questions and challenges surrounding *Rational Machines* including When do we rely on decisions made by intelligent machines What do decisions made by intelligent machines mean Are these decisions rational or fair Can we quantify these decisions and Is rationality subjective Introduces for the first time the concept of rational opportunity costs and the concept of flexibly

bounded rationality as a rationality of intelligent machines and the implications of these issues on the reliability of machine decisions Includes coverage of Rational Counterfactuals group versus individual rationality and rational markets Discusses the application of Moore's Law and advancements in Artificial Intelligence as well as developments in the area of data acquisition and analysis technologies and how they affect the boundaries of intelligent machine rationality

**Novel Ceramic Materials** R. Saravanan, 2016-06-01 The book presents a number of novel ceramic materials that have great potential for advanced technological applications such as microwave devices communication instruments and memory devices The materials covered include piezoelectric ceramics zirconia ceramics doped NiO ceramic nanostructures BST ceramics Barium Strontium Titanates manganite ceramics Ce doped LaMnO<sub>3</sub> and Sb doped NKN Sodium Potassium Niobates as well as materials with ferrite structures and with multi ferroic structures The materials were characterized experimentally by means of XRD X ray diffraction SEM Scanning electron microscopy EDX Energy Dispersive X ray analysis UV Visible Spectroscopy and VSM Vibrating sample magnetometer The results are discussed in terms of the structural characteristics of the various crystal structures their special surface morphology and their optical and magnetic properties Of particular interest is the determination of the electron density distribution on the basis of XRD data and computerized evaluations These data elucidate the atomic electronic structure of the materials and make us understand the specific characteristics of these novel ceramics
