Scientific Approaches to Consciousness Jonathan D. Cohen,Jonathan W. Schooler,2014-04-04 There are many ways to approach the understanding of consciousness Questions about these ways have occupied philosophers and metaphysicians

for centuries During the early growth of cognitive science the problem of consciousness remained taboo but an increasing number of studies have either implicitly or explicitly begun to bear on its nature These have been inspired by a number of different different original questions and focus on a variety of different empirical phenomena Thus studies of implicit memory subliminal processing strategic versus automatic processing allocation of attention and differences between information processes in the awake versus dreaming state all share a common assumption of a particular quality or state awareness awareness alertness namely consciousness that somehow can be distinguished from another type of state or states in which the subject is not aware of the information being processed What distinguishes the cognitive psychological and cognitive neuroscience approach to the question of consciousness from that of philosophy and metaphysics is scientific methodology a set of tools that permit the empirical study of a phenomenon in an objective and reproducible way Recent developments in both the empirical and theoretical methodologies of these fields have made it possible to begin to study the phenomenon associated with if not directly underlying consciousness in a scientific fashion This volume tries to resolve the difficulties associated with the scientific investigation of consciousness The intent is to explore the extent to which consciousness can be the target of direct scientific inquiry to get on the table some of the relevant work and consider the degree to which this research can help inform our understanding of consciousness It brings together a group of cognitive and neuroscientists to share relevant recent research in the fields of cognitive science and neuroscience and to determine whether any new strategies for the scientific pursuit of this question can be developed A long term goal is the development of a unified understanding of consciousness scientific as well as philosophical perspectives This volume takes the first step toward building the necessary local bridges Creative Mindfulness Techniques for Clinical Trauma Work Corinna M.

Learning Toward an Ecological Consciousness

E. O'Sullivan, 2017-02-15 Transformative learning involves experiencing a deep structural shift in the basic premises of thought feelings and actions It is a shift of consciousness that dramatically and permanently alters our way of being in the world Such a shift involves our understanding of ourselves and our self locations our relationships with other humans and with the natural world our understanding of relations of power in interlocking structures of class race and gender our body awarenesses our visions of alternative approaches to living and our sense of possibilities for social justice and peace and personal joy The editors of this collection make several challenges to the existing field of transformative learning the first is to theoreticians who have attempted to describe the nature of transformative learning without regard to the content of transformative learning The editors argue that transformative learning theory cannot be constructed in a content neutral or context free way Their second challenge which assumes the importance content for transformative learning is to educators as practitioners The editors argue that transformative learning requires new educational practices consistent with the content Arts based research and arts based teaching learning practices are one example of such new educational practices Education for the soul or spiritual practices such as meditation or modified martial arts or indigenous peoples forms of teaching learning is another example Each article in the collection presents a possible model of these new practices

Nonlinear Pedagogy and the Athletic Skills Model James Rudd, Ian Renshaw, Geert Savelsbergh, Jia Yi Chow, Will Roberts, Daniel Newcombe, Keith Davids, 2021-06-27 This book offers an ecological conceptualisation of physical literacy Re embracing our ancestry as hunter gatherers we gain a new appreciation and understanding of the importance of play not only in terms of how children learn but also in showing us as educators how we can lay the foundations for lifelong physical activity The concept of physical literacy has been recognised and understood throughout history by different communities across the globe Today as governments grapple with the multiple challenges of urban life in the 21st century we can learn from our forebears how to put play at the centre of children s learning in order to build a more enduring physically active society This

book examines contemporary pedagogical approaches such as constraints led teaching nonlinear pedagogy and the athletic skills model which are underpinned by the theoretical framework of Ecological Dynamics It is suggested that through careful design these models aimed at children as well as young athletes can i encourage play and facilitate physical activity and motor learning in children of different ages providing them with the foundational skills needed for leading active lives and ii develop young athletes in elite sports programmes in an ethical enriching and supportive manner Through this text scientists academics and practitioners in the sub disciplines of motor learning and motor development physical education sports pedagogy and physical activity and exercise domains will better understand how to design programmes that encourage play and thereby develop the movement skills self regulating capacities motivation and proficiency of people so that they can move skilfully effectively and efficiently while negotiating changes throughout the human lifespan **CTET Paper-II Exam**
