Ecology The Ascendent Perspective:

Ecology, the Ascendent Perspective Robert E. Ulanowicz, 1997 A challenge to existing Newtonian and Darwinian paradigms Ecology the Ascendent Perspective demonstrates that a theoretically reshaped science of ecology better suited to portraying the dynamics of the natural world can be a more effective means of ensuring its health Ecology, the Ascendent Perspective Robert E. Ulanowicz, 1999 **The Philosophy of Ecology** David R. Keller, Frank B. Golley, 2000 This is the first introductory anthology on the philosophy of ecology edited by an ecologist and a philosopher It illustrates the range of philosophical approaches available to ecologists and provides a basis for understanding the thinking on which many of today's environmental ideas are founded Collectively these seminal readings make a powerful statement on the value of ecological knowledge and thinking in alleviating the many problems of modern industrial civilization Issues covered include the challenges of defining scientific ecology tracing its genealogy and distinguishing the science from various forms of ecological like thinking the ontology of ecological entities and processes selected concepts of community stability diversity and niche the methodology of ecology rationalism and empiricism reductionism and holism the significance of evolutionary law for ecological science **God's Providence and Randomness in Nature** Robert John Russell, Joshua M. Moritz, 2019-02-11 In October 2014 a group of mathematicians physicists ecologists philosophers and theologians gathered at a special conference in Berkeley California to present the results of a two year research program dubbed Project SATURN This program explored many rich avenues of thought at the intersection of modern science and Christian theology Chief among them is the possibility that specific processes might be so complex that they do not have sufficient physical causes Known as ontological indeterminism this idea has profound implications for theology Specifically it allows God to be thought of as acting providentially within nature without violating the laws and processes of nature Such a momentous insight could influence how we understand free will natural evil suffering in nature and the relation between divine providence and human evolution The essays collected here discussed these topics and were initially presented at the 2014 conference Part I establishes the scientific basis for conceptualizing specific processes in the universe as inherently random and possibly indeterministic Part II discusses the philosophical and theological issues that spring from this understanding Together they represent the cutting edge of thought in the increasingly productive dialogue between science and theology Short for the Scientific and Theological Understandings of Randomness in Nature Project SATURN was created by the Center for Theology and the Natural Sciences a Program of the Graduate Theological Union Berkeley It was funded with a grant administered by Calvin College and provided by the John Templeton Foundation **Hierarchical Perspectives on Marine Complexities** Spencer Apollonio, 2002-10-30 The Gulf of Maine supports a vital fishery for North America and is one of the most intensely studied marine ecosystems in the world An understanding of its ecology has practical applications to management of other marine systems and fisheries This book is the first application of Hierarchy Theory to the ecological workings of the Gulf of Maine

and of marine ecosystems in general Hierarchy Theory offers a perspective that simplifies the apparent complications and contradictions of ecosystems which encompass a number of scales of time from minutes to decades or longer and of space from centimeters to kilometers Spencer Apollonio explores in detail the idea of natural constraints inherent in hierarchical ecosystems and the impact upon such systems when constraints are reduced or removed He argues that conventional fisheries management which practices the removal of these constraints may be doomed to failure Apollonio focuses in particular on the groundfish crisis in the Gulf the precipitous decline due to overfishing in populations of cod haddock pollock hakes and various types of flounders which have together constituted the mainstay of the Maine fishing industry for centuries Hierarchical Perspectives on Marine Complexities presents a compelling case for a new approach that holds the promise of resource sustainability in the face of enormously complicated natural and cultural forces **The Philosophical**

Foundations of Ecological Civilization Arran Gare, 2016-08-05 The global ecological crisis is the greatest challenge humanity has ever had to confront and humanity is failing The triumph of the neo liberal agenda together with a debauched scientism has reduced nature and people to nothing but raw materials instruments and consumers to be efficiently managed in a global market dominated by corporate managers media moguls and technocrats The arts and the humanities have been devalued genuine science has been crippled and the quest for autonomy and democracy undermined The resultant trajectory towards global ecological destruction appears inexorable and neither governments nor environmental movements have significantly altered this or indeed seem able to The Philosophical Foundations of Ecological Civilization is a wide ranging and scholarly analysis of this failure This book reframes the dynamics of the debate beyond the discourses of economics politics and techno science Reviving natural philosophy to align science with the humanities it offers the categories required to reform our modes of existence and our institutions so that we augment rather than undermine the life of the ecosystems of which we are part From this philosophical foundation the author puts forth a manifesto for transforming our culture into one which could provide an effective global environmental movement and provide the foundations for a global ecological civilization **Nature in Common?** Ben Minteer, 2009-04-15 A groundbreaking contribution to a central debate in environmentalism

Ecological Sustainability and Integrity: Concepts and Approaches J. Lemons, L. Westra, Robert Goodland, 2013-04-17 This book follows upon earlier work which culminated in the publication of two recent books Sustainable Development Science Ethics and Public Policy John Lemons and Donald A Brown editors and Perspectives on Ecological Integrity Laura Westra and John Lemons editors Both of these books also were published by Kluwer Academic Publishers In this book we seek to explore more fully the concepts of sustainability and ecological integrity as well as the connections between them We have divided chapters into three groups In the first the concept of sustainability in relation to science law and ethics is explored In the second concepts of sustainability and ecological integrity are applied to problems in specific natural resources Finally in the third group we examine possible approaches to public policy which might include

concepts of sustainability and ecological integrity Overall we believe that this collection presents a wide variety of perspectives discussions and case studies John Lemons Laura Westra Robert Goodland Editors ix CONTENTS PART I Sustainability in Relation to Science Law and Ethics Chapter 1 The Concept of Sustainability A Critical Approach Lynton K Caldwell 1 Problems of Definition 2 2 Behavioral Obstacles 4 3 Psychological Obstacles Seven Deadly Sins of Unsustainability 8 4 **Models of the Ecological Hierarchy** Ferenc Jordan, Sven Erik Jørgensen, 2012-11-29 Based on selected papers covering the presentations at the 7th European Conference on Ecological Modelling organized by ISEM and hosted by The Microsoft Research University of Trento Center for Computational and Systems Biology from 30 May to 2 June 2011 in Riva del Garda Italy P xi Ecological Engineering and Ecosystem Restoration William J. Mitsch, Sven Erik Jørgensen, 2003-09-18 Completely updated to keep pace with current technology Provides a firm grounding the fundamentals theory and latest techniques Includes completely updated case studies **Brazilian Mangroves and Salt Marshes** Yara Schaeffer-Novelli, Guilherme Moraes de Oliveira Abuchahla, Gilberto Cintrón-Molero, 2023-02-25 This book offers a new ecosystemic approach to the understanding of mangrove and salt marsh ecosystems Brazil has one of the largest areas of mangroves in the world where salt marshes might or might not be associated Different landscapes comprise the extensive coastline where mangrove and salt marsh species composition is discussed through the analysis of physiography zonation and succession processes Both salt marsh and mangrove plants and the associated macroalgae will be characterized in their ecophysiological and phenological aspects as well as genetic and epigenetic diversity The chapters on microbial diversity and litterfall expose the well known importance of these ecosystems as highly productive carbon sinks and pumps The associated fauna of invertebrates benthic meio and macrofaunas especially brachyuran crabs and vertebrates fishes birds and mammals are presented in a special section The conservational approach encompasses issues such as historical ecology economic valuation protected areas environmental education climate changes and adaptive management **Fundamentals of Ecological Modelling** Sven Erik Jørgensen, G. management in theory and practice It covers established branches of philosophy such as aesthetics epistemology moral philosophy political and social philosophy philosophy of education philosophy of practice and philosophy of science The Handbook's broad scope maps out the field and provides a forum where philosophy can be meaningfully applied to the study of management in all its forms The original peer reviewed research published here sheds new light on the complexities of management theory and practice beyond what hitherto has been possible with the sole application of the social sciences As philosophy provides a meta framework for moving beyond paradigm fragmentation within management research and education this allows researchers and practitioners to find harmony and discord in the perspectives revealed by a philosophical lens

Aquatic Food Webs Andrea Belgrano, 2005-04-07 Aquatic Food Webs provides a current synthesis of theoretical and empirical food web research The textbook is suitable for graduate level students as well as professional researchers in community ecosystem and theoretical ecology in aquatic ecology and in conservation biology **Handbook of Ecological Indicators for Assessment of Ecosystem Health** Sven E. Jorgensen, Fu-Liu Xu, Robert Costanza, 2005-01-27 The field of ecosystem health explores the interactions between natural systems human health and social organization As decision makers require a sound modular approach to environmental management and sustainable development ecosystem health assessment indicators are increasingly used across any number of applications The Handbook of Ecological Systems Biology A.K. Konopka, 2006-11-20 With extraordinary clarity the Systems Biology Principles Methods and Concepts focuses on the technical practical aspects of modeling complex or organic general systems It also provides in depth coverage of modeling biochemical thermodynamic engineering and ecological systems Among other methods and concepts based in logic computer **Understanding and Solving Environmental Problems in the 21st Century** R. Costanza, S.E.

Jorgensen, 2002-06-05 The aim of this book is to encourage integration of the natural and social sciences with the policy and design making community and thereby develop a deeper understanding of complex environmental problems Its fundamental themes are integrated modeling and assessment complex adaptive hierarchical systems ecosystem services science and decision making ecosystem health and human health quality of life and the distribution of wealth and resources This book will act as a state of the art assessment of integrated environmental science and its relation to real world problem solving It is aimed not only at the academic community but also as a sourcebook for managers policy makers and the informed public It deals both with the state of the science and the level of consensus among scientists on key environmental issues The concepts underlying this book were developed at the 2nd EcoSummit workshop held in Halifax Nova Scotia June 2000 with active participation from all delegates and attempts to present their collective view **Ecology and Environment in European Drama** Downing Cless, 2010-05-11 Looking at European drama through an ecological lens this book chronicles nature and the environment as primary topics in major plays from ancient to recent times Cless focuses on the few yet well known plays in which nature is at stake in the action or the environment is a dramatic force Though theater predominantly

explores human and cultural themes these plays fully display the power of the other than human world and its endangerment during the history of Europe While offering a broad overview the book features extensive case studies of several playwrights plays and eco theater productions Aristophanes The Birds Marlowe s Doctor Faustus Shakespeare s A Midsummer Night s Dream and The Tempest and Giraudoux s The Madwoman of Chaillot In each case Cless connects nature in the play to nature in the life of the playwright based on biographical research into the understanding of natural philosophy and awareness of the immediate environment that influenced the specific play The book is one of the first of its kind in a growing field of ecocriticism and emerging eco studies of theater

Ecological Processes Handbook Luca Palmeri,Alberto Barausse,Sven Erik Jorgensen,2013-08-28 Ecology is cross disciplinary field involving many different aspects of science Written with this in mind this book introduces ecological processes ranging from physical processes to chemical processes and biological processes It contains all the necessary information on an ecological process a clear detailed but not too lengthy definition

Philosophy of Complex Systems ,2011-05-23 The domain of nonlinear dynamical systems and its mathematical underpinnings has been developing exponentially for a century the last 35 years seeing an outpouring of new ideas and applications and a concomitant confluence with ideas of complex systems and their applications from irreversible thermodynamics A few examples are in meteorology ecological dynamics and social and economic dynamics These new ideas have profound implications for our understanding and practice in domains involving complexity predictability and determinism equilibrium control planning individuality responsibility and so on Our intention is to draw together in this volume we believe for the first time a comprehensive picture of the manifold philosophically interesting impacts of recent developments in understanding nonlinear systems and the unique aspects of their complexity The book will focus specifically on the philosophical concepts principles judgments and problems distinctly raised by work in the domain of complex nonlinear dynamical systems especially in recent years Comprehensive coverage of all main theories in the philosophy of Complex Systems Clearly written expositions of fundamental ideas and concepts Definitive discussions by leading researchers in the field Summaries of leading edge research in related fields are also included
