The appearance of this Second Edition has been encouraged by the favorable reception of the first. This has offered us the opportunity to update the materials and to expand the exposition of our central theses concerning 1 the integration of water quantity quality issues and the treatment of water as a multi product commodity with the market playing a major role in determining water quality discriminant pricing 2 the drawbacks of public controls regulation and enforcement and the need to expand privatization of water supply and of water and wastewater treatment facilities to ensure their appropriate development and modernization through increased reliance on private capital 3 the unification and centralization of water management on the river basin level in order to handle effectively the expanding pressures for water availability for the elimination of waterborne disease for extensive and effective pollution abatement as well as coping with the related issues of soil erosion siltation in streams channels and reservoirs protection against distress from drought and floods and with the myriad problems relating to the environment recreation and navigation. We have maintained the division of the book into four major parts and 12 chapters.

This book discusses the recently introduced concession policy which is also known as PPP worldwide on municipal utilities policy in China. In this context, critics have claimed that there is a gap in accountability with regard to concessions. The author utilizes interdisciplinary methods and comparative studies taking into account the situation in the EU and US to analyze the accountability gap some feel will be created when the policy is implemented. Taking water sector concessions as the subject of discussion, the author distinguishes between three types of accountability: traditional bureaucratic accountability, legal accountability and public accountability. By systematically analyzing the essential problems involved, the book attempts to achieve a better understanding of concession and its application in the context of public utilities and finds that the alleged accountability gap is attributed to traditional bureaucratic accountability in China and the concession system per se.

The management of natural resources often leads to ill-planned development, misappropriation of land, corruption, bad governance, misaligned budget priorities, lack of strong institutional reforms and weak policies coupled with a continued denial of the human rights of local communities. This book

argues that human rights law can play an important role in ensuring a more effective and sustainable management of natural resources putting forward the idea of a human rights based normative framework for natural resource management It offers a comprehensive analysis of the different norms procedures and approaches developed under human rights law that are relevant to the management of natural resources Advocating for a less market and corporate approach to the control ownership and management of natural resources this book supports the development of holistic and coherent integration of human rights law in the overall international legal framework governing the management of natural resources
