Neuroeconomics and the Firm Angela A. Stanton, Mellani Day, Isabell M. Welpe, 2010-01-01 Do people with high testosterone levels make decisions the same way as people with lower testosterone Do men change their behavior when a pretty woman enters the office Do women change their behavior when a handsome man enters the office Do men and women affect each other within the firm to the detriment or the benefit of the firm In some ways the questions this edited volume addresses are questions that we are all familiar with and have asked for many years It suggests looking for answers in places that that we have never thought of before Some of the chapters will surprise you with their ingenious simple answers and propositions some will perhaps make you feel awkward with their straight forward way of presenting what we all suspected but felt uncomfortable to talk about From the foreword by David B Audretsch This volume brings together leading researchers from a variety of fields to investigate the concept of the firm from new perspectives arising from neuroeconomics The traditional theory of the firm has focused on the strategic operational and resource management objectives of the firm as an organization This timely and informative book explores new horizons in the biology of human decision making and behavior including uncertainty entrepreneurship and ethics as it affects the functioning of the organization The fascinating chapters cover a wide range of research fields drawing on both the conscious and the unconscious mind and how common hormonal cycles in the female and testosterone variations in the male affect each other in the workplace and its affect on the firm as an organization The topics of entrepreneurship and the recent global

financial crisis are discussed from the perspective of hormonal forces and the implications of those forces in the future It is an enlightening selection of articles that scholars students business leaders and managers will find a valuable read Vernon L Smith 2002 Nobel Laureate in Economics The ideal firm has been studied over several centuries yet little is known about what makes one successful and another fail This pioneering book brings together leading researchers investigating the concept of the firm from a neuroscientific perspective From the viewpoint of economics the firm s purpose is to maximize shareholders wealth resources are commodities each with its particular supply and demand curve that can be manipulated by the firm to its own benefit Traditionally the firm is focused on the strategic operational and resource management objectives The editors instead suggest that the objective of the firm is equal to the objectives of its workers The definition and function of risk in decision making ethics trust and the global financial crisis are all discussed They are analyzed from the perspective of human bio physiology using scanning and hormonal analysis tools with a focus on the implications for the bottom line of the firm With experimental as well as theoretical and applied contributions this book will benefit scholars and students of economics business management finance organizational behavior entrepreneurship psychology neuroscience and law Practitioners of management entrepreneurship and law firms will also find this book to be a captivating read

Development Economics and Policy David Sapsford, John-ren Chen, 1998-08-10 Hans Singer is undoubtedly one of if not the world s major scholars in the field of Development Economics Over the last six decades he has made numerous contributions to the subject both as scholar and practitioner This book contains 27 essays that were prepared for a conference that was held in Innsbruck Austria in May 1996 to celebrate his 85th birthday and represents a major and important overview of issues in development economics from the most eminent scholars in the field Handbook of Behavioural Economics and Smart Decision-Making Morris Altman, 2017-05-26 This Handbook is a unique and original contribution of over thirty chapters on behavioural economics examining and addressing an important stream of research where the starting assumption is that decision makers are for the most part relatively smart or rational This particular approach is in contrast to a theme running through much contemporary work where individuals behaviour is deemed irrational biased and error prone often due to how people are hardwired In the smart people approach where errors or biases occur and when social dilemmas arise more often than not improving the decision making environment can repair these problems without hijacking or manipulating the preferences of decision makers This book covers a wide range of themes from micro to macro including various sub disciplines within economics such as economic psychology heuristics fast and slow thinking neuroeconomics experiments the capabilities approach institutional economics methodology nudging ethics and public policy **Uncertainty in individual and social decisions** Stefan Tobias Trautmann, 2008 In most decisions we have to choose between options that involve some uncertainty about their outcomes and their effect on our well being Casual observation and carefully controlled studies suggest that in making these decisions we often deviate from the benchmark of

expected income maximization This should not come as a surprise Our well being is affected by many factors and the outside observer does not know the importance of various dimensions of the outcome to the decision maker Even if goals are well defined it is far from obvious that we succeed in choosing what is best for us The psychological literature has shown deviations from optimal behavior in simple decision tasks and we may expect similar deviations to occur in more complex real life problems In real life situations however experience and market interaction will help to restrain suboptimal behavior This thesis examines deviations from expected income maximization in situations involving uncertainty We focus on deviations generated by social factors The Emerald Handbook of Ethical Finance and Corporate Social Responsibility Ahmed Imran Hunjra,Khaled Hussainey,2024-05-06

Analyses of Decisions, Voting and Games Michael A. Jones,David McCune,Jennifer M. Wilson,2024-03-25 This volume contains the proceedings of the virtual AMS Special Session on Mathematics of Decisions Elections and Games held on April 8 2022 Decision theory voting theory and game theory are three related areas of mathematics that involve making optimal decisions in different contexts While these three areas are distinct much of the recent research in these fields borrows techniques from other branches of mathematics such as algebra combinatorics convex geometry logic representation theory etc The papers in this volume demonstrate how the mathematics of decisions elections and games can be used to analyze problems from the social sciences **The Psychology of Economic Decisions** Isabelle Brocas,Juan D. Carrillo,2003

Psychologists have a long tradition of studying human behavior strengths and weaknesses biases and limitations Economists have constructed normative frameworks that capture the most important elements of human decision making and developed powerful tools to determine individual and strategic choices in a variety of situations Only recently have their strengths been combined and economic models enriched with key ingredients found in psychological studies This volume covers four of the most important themes in this interdisciplinary field feelings inconsistencies limitations and biases Each chapter contributes to a more comprehensive and accurate modelling and description of human behavior Its four parts cover the origins formation and evolution of beliefs consistency commitment and intertemporal separability of dynamic choices attention preference formation and risk evaluation in limited cognition and affective behaviour specifically the role of emotions in decision making *Artificial Economics* Ruben Mercado,2021-11-04

This introductory overview explores the methods models and interdisciplinary links of artificial economics a new way of doing economics in which the interactions of artificial economic agents are computationally simulated to study their individual and group behavior patterns Conceptually and intuitively and with simple examples Mercado addresses the differences between the basic assumptions and methods of artificial economics and those of mainstream economics He goes on to explore various disciplines from which the concepts

and methods of artificial economics originate for example cognitive science neuroscience artificial intelligence evolutionary science and complexity science Introductory discussions on several controversial issues are offered such as the application of the concepts of evolution and complexity in economics and the relationship between artificial intelligence and the philosophies of mind This is one of the first books to fully address artificial economics emphasizing its interdisciplinary links and presenting in a balanced way its occasionally controversial aspects *Decision Theory and Social Ethics* H.W.

Gottinger, W. Leinfellner, 2012-12-06 Ethics as one of the most respectable disciplines of philosophy has undergone a drastic and revolutionary change in recent time There are three main trends of this development The first trend can be described as a tendency towards a rigorous formal and analytical language This means simply that ethics has created beside its own formalized set theoretical language a variety of new formalized logical and mathematical methods and concepts Thus ethics has become a formalized meta or epidiscipline which is going to replace the traditional concepts principles and ethical methods in the realm of social sciences It is clear that a formalized form of ethics can be used more easily in social economic and political theories if there are ethical conflicts to be solved This first trend can be regarded as a *conditio sine qua non* for application in and imposing ethical solutions on social scientific theories The second trend may be characterized as an association or unification tendency of a formalized and analytical ethics with decision theory Decision theory as a new interdisciplinary of social sciences is actually an assemblage of a variety of subtheories such as value utility theory game theory collective decision theory etc Harsanyi has called this complex of subtheories a general theory of human behavior Analytical or formal ethics is actually using this general theory of human behavior as a vehicle simply because this theory deals from the beginning with conflict solution i e **Conceptual Economics: The Liaising Role In Politics And Social Sciences**

Kui-wai Li, 2021-01-18 Given that there is no shortage of economic theories while economic problems are growing periodically Conceptual Economics boldly attempts to initiate a new approach by employing conceptual and intuitive tools to examine the intra relationship between microeconomics and macroeconomics as well as the inter relationship between economic analysis and other social science studies especially the relationship with political science The few intuitive ideas include the separation between *ex ante* situations and *ex post* outcomes the difference between endowment differences and unequal outcomes and the role of economics as a vehicle in the delivery of numerous social and political activities The discussion extends to cover an analysis on human values and concludes with a recommendation on the functionality of civic capitalism With intuition and analytical reasoning within economics and with other social sciences Conceptual Economics can become a new branch in economic study where scholars analysts and intellectuals could think outside the box by liaising a wider economic perspective and or amalgamating non economic aspects into their analysis This shall provide a new dimension to solving human economic problems and possibly area of intellectuality
