Economy and Settlement in the Near East Naomi F. Miller, 1990-01-29 Archaeological interpretations are built on many types of evidence While no one method or analysis can fully reveal an extinct economic system the papers in this volume are each focused on a single category of data to elucidate different aspects of ancient economy and settlement settlement pattern Khurban plains trace elements in sealing clays Tepe Gawra seeds and charcoal Tepe Hissar Malyan Kurban Hoyuk economic texts Nippur MASCA Vol 7 Supplement

**The Social Construction of Ancient Cities** Monica L. Smith, 2013-04-09 What made ancient cities successful What are the similarities between modern cities and ancient ones The Social Construction of Ancient Cities offers a fresh perspective on ancient cities and the social networks and relations that built and sustained them marking a dramatic change in the way archaeologists approach them Examining ancient cities from a bottom up perspective the authors in this volume explore the ways in which cities were actually created by ordinary inhabitants They track the development of urban space from the point of view of individuals and households providing new insights into cities roles as social centers as well as focal points of political and economic activities Analyzing various urban communities from residences and neighborhoods to marketplaces and ceremonial plazas the authors examine urban centers in Africa Mesoamerica South America Mesopotamia the Indian subcontinent and China Collectively they demonstrate how complex networks of social relations and structures gave rise to the formation of ancient cities contributed to their cohesion and sustained their growth much as they do in modern urban centers The authors analyses draw from ancient texts as well as archaeological surveys and excavations of urban architecture and other material remains including portable objects for daily use and comestibles They show clearly how early urban dwellers consciously developed dense interdependent social networks to satisfy their needs for food housing and employment forged their own urban identities and generally managed to thrive in the crowded bustling and competitive environment that characterized ancient cities Not least of all they suggest how urban leaders and urban dwellers negotiated a consensus that enabled them to achieve both mundane and extraordinary goals in the process establishing their unique ritual legal and social status

*The Archaeology of Iran from the Palaeolithic to the Achaemenid Empire* Roger Matthews, Hassan Fazeli Nashli, 2022-06-30 The Archaeology of Iran from the Palaeolithic to the Achaemenid Empire is the first modern academic study to provide a synthetic diachronic analysis of the archaeology and early history of all of Iran from the Palaeolithic period to the end of the Achaemenid Empire at 330 BC Drawing on the authors deep experience and engagement in the world of Iranian archaeology and in particular on Iran based academic networks and collaborations this book situates the archaeological evidence from Iran within a framework of issues and debates of relevance today Such topics include human environment interactions climate change and societal fragility the challenges of urban living individual and social identity gender roles and status the development of technology and craft specialisation and the significance of early bureaucratic practices such as counting writing and sealing within the context of

evolving societal formations Richly adorned with more than 500 illustrations many of them in colour and accompanied by a bibliography with more than 3000 entries this book will be appreciated as a major research resource for anyone concerned to learn more about the role of ancient Iran in shaping the modern world *Botanical Aspects of Environment and Economy at Gordion, Turkey* Naomi F. Miller, 2011-09-01 The archaeological site of Gordion is most famous as the home of the Phrygian king Midas and as the place where Alexander the Great cut the Gordian knot on his way to conquer Asia Located in central Anatolia present day Turkey near the confluence of the Porsuk and Sakarya rivers Gordion also lies on historic trade routes between east and west as well as north to the Black Sea Favorably situated for long distance trade Gordion's setting is marginal for agricultural cultivation but well suited to pastoral production It is therefore not surprising that with the exception of a single Chalcolithic site the earliest settlements in the region are fairly late they date to the Early Bronze Age late 3rd millennium B C The earliest known levels of Gordion too date to the Early Bronze Age and occupation of at least some part of the site was nearly continuous through at least Roman times second half of the 1st century B C This work is a contribution to both the archaeobotany of west Asia and the archaeology of the site of Gordion The book's major concern is understanding long term changes in the environment and in land use An important finding with implications for modern land management is that the most sustainable use of this landscape involves mixed farming of dry farmed cereals summer irrigated garden crops and animal husbandry The large number of samples from the 1988-89 seasons analyzed here make this a rich source for understanding other materials from the Gordion excavations and for comparison with other sites in west Asia Content of this book's CD ROM may be found online at this location <http://core.tdar.org/project/376588> University Museum Monograph 131 Excavating Asian History Norman Yoffee, Bradley L. Crowell, 2022-05-10 Although history and archaeology each seek to elucidate the past both sets of data are incomplete and ambiguous and thus open to multiple readings that invite contradictory interpretations of human activity This is particularly true when scholars of each field ignore or fail to understand research in the other discipline Excavating Asian History contains case studies and theoretical articles that show how archaeologists have been investigating historical social and economic organizations and that explore the relationship between history and archaeology in the study of pre modern Asia These contributions consider biases in both historical and archaeological data that have occasioned rival claims to knowledge in the two disciplines Ranging widely across the region from the Levant to China and from the third millennium BC to the second millennium AD they demonstrate that archaeological and historical studies can complement each other and should be used in tandem The contributors are leading historians and archaeologists of Asia who present data issues and debates revolving around the most recent research on the ancient Near East early Islam India China and Southeast Asian states Their chapters illustrate the benefits of interdisciplinary investigations and show in particular how archaeology is changing our understanding of history Commentary chapters by Miriam Stark and Philip Kohl add new perspectives to the findings By showing the evolving

relationship between those who study archaeological material and those who investigate textual data Excavating Asian History offers practical demonstrations of how research has been and must continue to be structured

**Historical Dictionary of Mesopotamia** Gwendolyn Leick, 2003 The Historical Dictionary of Mesopotamia covers one of the oldest civilizations in history Providing comprehensive coverage of significant persons places events and institutions that influenced and shaped Mesopotamia's history For the scholar and general reader alike this guide provides a ready reference for the history of a civilization for which there are many gaps in the data

*The Archaeology of Elam* D. T. Potts, 1999-07-29 From the middle of the 3rd millennium BC until the coming of Cyrus the Great southwestern Iran was referred to in Mesopotamian sources as the land of Elam A heterogeneous collection of regions Elam was home to a variety of groups alternately the object of Mesopotamian aggression and aggressors themselves an ethnic group seemingly swallowed up by the vast Achaemenid Persian empire yet a force strong enough to attack Babylonia in the last centuries BC The Elamite language is attested as late as the Medieval era and the name Elam as late as 1300 in the records of the Nestorian church This book examines the formation and transformation of Elam's many identities through both archaeological and written evidence and brings to life one of the most important regions of Western Asia re evaluates its significance and places it in the context of the most recent archaeological and historical scholarship

*Ancestors for the Pigs* Sarah M. Nelson, 1998-01-29 This book brings together several new ways of thinking about pigs in the past creating a dialogue by drawing on several kinds of approaches from geography ethnography zoology history and archaeology to enrich the way we all understand the evidence found in archaeological sites

**Sorghum** C. Wayne Smith, Richard A. Frederiksen, 2000-12-25 The newest addition to the Wiley Series in Crop Science this book is an all in one guide to sorghum one of the eight major grain crops grown worldwide While presenting information in adequate detail for scientists it is also an invaluable reference for growers processors and grain merchants

*Ancient Plants and People* Marco Madella, Carla Lancelotti, Manon Savard, 2014-12-11 Ancient Plants and People is a timely discussion of the global perspectives on archaeobotany and the rich harvest of knowledge it yields Contributors examine the importance of plants to human culture over time and geographic regions and what it teaches of humans their culture and their landscapes

**Human Impact on Ancient Environments** Charles L. Redman, 1999-10 Threats to biodiversity food shortages urban sprawl lessons for environmental problems that confront us today may well be found in the past The archaeological record contains hundreds of situations in which societies developed long term sustainable relationships with their environments and thousands in which the relationships were destructive Charles Redman demonstrates that much can be learned from an improved understanding of peoples who through seemingly rational decisions degraded their environments and threatened their own survival By discussing archaeological case studies from around the world from the deforestation of the Mayan lowlands to soil erosion in ancient Greece to the almost total depletion of resources on Easter Island Redman reveals the long

range coevolution of culture and environment and clearly shows the impact that ancient peoples had on their world. These case studies focus on four themes: habitat transformation and animal extinctions, agricultural practices, urban growth, and the forces that accompany complex society. They show that humankind's commitment to agriculture has had cultural consequences that have conditioned our perception of the environment and reveal that societies before European contact did not necessarily live the utopian existences that have been popularly supposed. Whereas most books on this topic tend to treat human societies as mere reactors to environmental stimuli, Redman's volume shows them to be active participants in complex and evolving ecological relationships. *Human Impact on Ancient Environments* demonstrates how archaeological research can provide unique insights into the nature of human stewardship of the Earth and can permanently alter the way we think about humans and the environment. *La famille dans le Proche-Orient ancien: réalités, symbolismes et images* Lionel

Marti, 2014-07-15 In July 2009 the International Association for Assyriology met in Paris, France for 5 days to deliver and listen to papers on the theme *La famille dans le Proche Orient*. This volume, the proceedings of the conference, contains 53 of the papers read at the 55th annual *Rencontre*, including primarily papers directly connected with the theme and some on areas of related interest. The papers covered every period of Mesopotamian history from the third millennium through the end of the first millennium B.C.E. The photo on the back cover shows only a representative portion of the attendees who were warmly hosted by faculty and students from the Collège de France. **At the Dawn of History** Yağmur Heffron, Adam Stone, Martin Worthington, 2017-03-24 Nearly 50 students, colleagues, and friends of Nicholas Postgate join in tribute to an Assyriologist and Archaeologist who has had a profound influence on both disciplines. His work and scholarship are strongly felt in Iraq where he was the Director of the British School of Archaeology in the United Kingdom where he is Emeritus Professor of Assyriology in the University of Cambridge and in the subject internationally. He has fostered close collaboration with colleagues in Turkey and Iraq where he has been involved in archaeological investigation, always seeking to meld the study of texts with that of material remains. The essays embrace the full range of Postgate's interests, including government and administration, art history, population studies, the economy, religion, and divination, foodstuffs, ceramics, and Akkadian and Sumerian language in a word, all of ancient Mesopotamian civilisation. **Proceedings RMRS.**, 1998

**Proceedings--shrublands under fire**, 2008 **Agricultural Sustainability and Environmental Change at Ancient Gordion** John M. Marston, 2017-08-21 This book publishes the results of 220 botanical samples from the 1993-2002 Gordion excavations directed by Mary Voigt. Together with Naomi Miller's 2010 volume *Gordion Special Studies 5*, this book completes the publication of botanical samples from Voigt's excavations. The book aims to reconstruct agricultural decision making using archaeological and paleoenvironmental data from Gordion to describe environmental and agricultural changes at the site. John M. Marston argues that different political and economic systems implemented over time at Gordion resulted in patterns of agricultural decision making that were well adapted to the social setting of farmers in each period, but that

these practices had divergent environmental impacts with some regimes sponsoring sustainable agricultural practices and others leading to significant environmental change. The implications of this book are twofold. Gordion will now be one of the best published agricultural datasets from the entire Near East and thus serve as a valuable comparable dataset for regional synthesis of agricultural and environmental change and the methods the author developed to reconstruct agricultural change at Gordion serves as tools to engage questions about the relationship between social and environmental change at sites worldwide. Other books address similar themes but none in the Near East address these themes in diachronic perspective such as we have at Gordion University Museum Monograph 145.

**The Exploitation of Plant Resources in Ancient Africa** Marijke van der Veen, 2013-06-29. This volume presents a completely new and very substantial body of information about the origin of agriculture and plant use in Africa. All the evidence is very recent and for the first time all this archaeobotanical evidence is brought together in one volume. At present the information is unpublished or published in many disparate journals, conference reports, monographs, site reports, etc. Early publications concerned with the origins of African plant domestication relied almost exclusively on inferences made from the modern distribution of the wild progenitors of African cultivars; there existed virtually no archaeobotanical data at that time. Even as recently as the early 1990s, direct evidence for the transition to farming and the relative roles of indigenous versus Near Eastern crops was lacking for most of Africa. This volume changes that and presents a wide range of exciting new evidence, including case studies from Nigeria, Burkina Faso, Ethiopia, Uganda, Egypt, and Sudan, which range in date from 8000 BP to the present day. The volume addresses topics such as the role of wild plant resources in hunter-gatherer and farming communities, the origins of agriculture, the agricultural foundation of complex societies, long-distance trade, the exchange of foods and crops, and the human impact on local vegetation. All key issues of current research in archaeology, anthropology, agronomy, ecology, and economic history.

**Materials Issues in Art and Archaeology**, 1995. *Rethinking World-Systems* Gil J. Stein, 2022-08-16. The use of world systems theory to explain the spread of social complexity has become accepted practice by both historians and archaeologists. Gil Stein now offers the first rigorous test of world systems as a model in archaeology, arguing that the application of world systems theory to noncapitalist pre-fifteenth century societies distorts our understanding of developmental change by overemphasizing the role of external over internal dynamics. In this new study, Stein proposes two complementary theoretical frameworks for the study of interregional interaction: a distance parity model which views world systems as simply one factor in a broader range of intersocietal relations, and a trade diaspora model which explains variation in exchange systems from the perspective of participant groups. He tests his models against the archaeological record of Mesopotamian expansion into the Anatolian highlands during the fourth millennium B.C. Whereas some scholars have considered this Uruk expansion to be one of the earliest documented world systems, Stein uses data from the site of Hacinebi in southeastern Turkey to support his alternate perspective. Comparing economic data from pre and postcontact phases, Stein shows that the Mesopotamians did

not dominate the people of this distant periphery Such evidence argues Stein shows that we must look more closely at the local cultures of peripheries to develop realistic cross cultural models of variation in colonialism exchange and secondary state formation in ancient societies By demonstrating that a multitude of factors affect the nature and consequences of intersocietal contacts his book advocates a much needed balance between recognizing that no society can be understood in complete isolation from its neighbors and assuming the primacy of outside contact in a society s development

Climate Changes in the Holocene: Eustathios Chiotis, 2018-11-15 This book highlights climate as a complex physical chemical biological and geological system in perpetual change under astronomical predominantly solar control It has been shaped to some degree through the past glaciation cycles repeated in the last three million years The Holocene the current interglacial epoch which started ca 11 700 years ago marks the transition from the Stone Age to the unprecedented cultural evolution of our civilization Significant climate changes have been recorded in natural archives during the Holocene including the rapid waning of ice sheets millennial shifting of the monsoonal fringe in the northern hemisphere and abrupt centennial events A typical case of severe environmental change is the greening of Sahara in the Early Holocene and the gradual desertification again since the fifth millennium before present

Climate Changes in the Holocene Impact Adaptation and Resilience investigates the impact of natural climate changes on humans and civilization through case studies from various places periods and climates Earth and human society are approached as a complex system thereby emphasizing the necessity to improve adaptive capacity in view of the anthropogenic global warming and ecosystem degradation Features Written by distinguished experts the book presents the fundamentals of the climate system the unparalleled progress achieved in the last decade in the fields of intensified research for improved understanding of the carbon cycle climate components and their interaction Presents the application of paleoclimatology and modeling in climate reconstruction Examines the new era of satellite based climate monitoring and the prospects of reduced carbon dioxide emissions
