Westwater,2007-05-08 Knowledge itself is soon obsolete It is a blunt instrument Only by understanding can problems be solved and progress achieved Reliability in performance of electronic equipment in the face of demands for continuing miniaturisation and the anticipated abolition of lead containing solders represents a major engineering challenge The involvement of numerous disciplines such as electrical electronic mechanical manufacturing and materials engineering together with physicists and computer specialists adds to the complexity of the situation Nevertheless with electronics being the World s largest industrial sector the potential rewards to the winners are substantial This book aims to provide the ingredients for understanding together with knowledge of reliability in interconnection technology and of the implementation of lead free solders It is strongly contended that such a combination forms the necessary basis for greater structural integrity and enhanced performance The text is essentially in three parts The intentions of the Part I component The Materials Perspective Chapters 1 6 are to present a snapshot of the current but rapidly changing global scene and to establish a firm understanding of the fundamentals surrounding interconnection performance With potential readers possessing a broad spectrum of knowledge and expertise this is essential It could be argued that the reason for the limited progress made in this field to date has been due to the difficulties encountered in communicating effectively across the discipline boundaries
