The Routledge Research Companion to Electronic Music: Reaching out with Technology Simon

Emmerson, 2018-05-16 The theme of this Research Companion is connectivity and the global reach of electroacoustic music and sonic arts made with technology The possible scope of such a companion in the field of electronic music has changed radically over the last 30 years The definitions of the field itself are now broader there is no clear boundary between electronic music and sound art Also what was previously an apparently simple divide between art and popular practices is now not easy or helpful to make and there is a rich cluster of streams of practice with many histories including world music traditions This leads in turn to a steady undermining of a primarily Euro American enterprise in the second half of the twentieth century Telecommunications technology most importantly the development of the internet in the final years of the century has made materials practices and experiences ubiquitous and apparently universally available though some contributions to this volume reassert the influence and importance of local cultural practice Research in this field is now increasingly multi disciplinary Technological developments are embedded in practices which may be musical social individual and collective The contributors to this companion embrace technological scientific aesthetic historical and social approaches and a host of hybrids but most importantly they try to show how these join up Thus the intention has been to allow a wide variety of new practices to have voice unified through ideas of reaching out and connecting together and in effect showing that there is emerging a different kind of global music

Living Electronic Music Simon Emmerson, 2017-09-29 Drawing on recent ideas that explore new environments and the changing situations of composition and performance Simon Emmerson provides a significant contribution to the study of contemporary music bridging history aesthetics and the ideas behind evolving performance practices Whether created in a studio or performed on stage how does electronic music reflect what is live and living What is it to perform live in the age of the laptop Many performer composers draw upon a library of materials some created beforehand in a studio some coded on the fly others plundered from the widest possible range of sources But others refuse to abandon traditionally created and structured electroacoustic work Lying behind this maelstrom of activity is the perennial relationship to theory that is ideas principles and practices that somehow lie behind composers and performers actions Some composers claim they just respond to sound and compose with their ears while others use models and analogies of previously non musical processes It is evident that in such new musical practices the human body has a new relationship to the sound There is a historical dimension to this for since the earliest electroacoustic experiments in 1948 the body has been celebrated or sublimated in a strange dance of forces in which it has never quite gone away but rarely been overtly present The relationship of the body performing to the spaces around has also undergone a revolution as the source of sound production has shifted to the loudspeaker Emmerson considers these issues in the framework of our increasingly acousmatic world in which we cannot see the source of the sounds we hear

The Cognitive Continuum of Electronic Music Anil Çamci, 2021-12-30 The electronic medium allows any audible sound to be contextualized as music This creates unique structural possibilities as spectrum dynamics space and time become continuous dimensions of musical articulation What we hear in electronic music ventures beyond what we traditionally characterize as musical sound and challenges our auditory perception on the one hand and our imagination on the other Based on an extensive listening study conducted over four years this book offers a comprehensive analysis of the cognitive processes involved in the experience of electronic music It pairs artistic practice with theories from a range of disciplines to communicate how this music operates on perceptual conceptual and affective levels Looking at the common and divergent ways in which our minds respond to electronic sound it investigates how we build narratives from our experience of electronic music and situate ourselves in them
