Electrum Naotatsu Shikazono, Masaaki Shimizu, 1988 **Geochemical and Tectonic Evolution of Arc-Backarc Hydrothermal Systems** N. Shikazono, 2003-07-01 Many Neogene hydrothermal ore deposits have been formed on and near the Japanese islands from the middle Miocene to the present day and today many subaerial and submarine active geothermal systems are active This book summarizes the geochemical and tectonic features and the evolution of various types of ore deposits and current island arc and backarc hydrothermal systems in Japan starting with the Mesozoic **Chemical Compositions of Electrum Grains in Ore and Placer Deposits in the Japanese Islands** Kazumi Yokoyama, 2011

Environmental and Resources Geochemistry of Earth System Naotatsu Shikazono, 2015-01-05 The Earth system consists of subsystems that include the atmosphere hydrosphere water geosphere rocks minerals biosphere and humans In order to understand these subsystems and their interactions it is essential to clarify the mass transfer mechanism geochemical cycle and influence of human activity on the natural environment This book presents fundamental theories thermodynamics kinetics mass balance model coupling models such as the kinetics fluid flow model the box model and others concerning mechanisms in weathering formation of hydrothermal ore deposits hydrothermal alteration formation of groundwater quality and the seawater system The interaction between fluids atmosphere water and solid phases rocks minerals occurs both in low temperature and also in high temperature systems This book considers the complex low temperature cycle with the high temperature cycle a combination that has not been dealt with in previous books concerning Earth systems Humanity is a small part of the biosphere however human activities greatly influence Earth's surface environments atmosphere hydrosphere biosphere soils rocks Thus the influences of humans on other subsystems particularly mass transfer in the deep underground geologic environment composed of host rocks and groundwater are discussed in relation to high level nuclear waste geologic disposal and CO₂ underground sequestration topics that have not been included in other books on environmental science **New Mineral Species and Their Crystal Structures** Irina O. Galuskina, Igor V. Pekov, 2019-04-02 The current Special Issue of Minerals entitled New Mineral Species and Their Crystal Structures contains articles with full descriptions of recently discovered mineral species verneite thermaerogenite parafiniukite nggerathite Cecerromojonite aurihydrargyrumite sharyginite fiemmeite oyonite tiberiobardiite and ariegilatite and with recent results in the investigation of structures for minerals which were insufficiently studied in the crystal chemical aspect rusinovite barioferrite kurchatovite and clinokurchatovite The described new minerals demonstrate a great chemical and structural diversity and are characterized by different formation conditions and mineral associations The mineralogical discoveries come from many different localities around the world All articles were prepared to a high scientific level and the authors used a lot of modern methods for their investigation of the solid The papers published in this Special Issue can be of interest not only to mineralogists and mineral collectors but also to physicists and chemists of solid and specialists in the field of materials

science **Froth Flotation** Maurice C. Fuerstenau, Graeme J. Jameson, Roe-Hoan Yoon, 2007 Froth Flotation A Century of Innovation comprehensively describes state of the art research and practice in mineral froth flotation a century after its introduction Recognized experts from around the world provide in depth coverage on many facets of flotation including the historical aspects fundamentals chemistry flotation cells modeling and simulation and flotation plant practice This commemorative volume is an invaluable reference for industry professionals researchers and graduate students BOOK
