A Short History of Science William Thompson Sedgwick, Harry Walter Tyler, 1917 **A Brief History of String Theory** Dean Rickles, 2014-02-18 During its forty year lifespan string theory has always had the power to divide being called both a theory of everything and a theory of nothing Critics have even questioned whether it qualifies as a scientific theory at all This book adopts an objective stance standing back from the question of the truth or falsity of string theory and instead focusing on how it came to be and how it came to occupy its present position in physics An unexpectedly rich history is revealed with deep connections to our most well established physical theories Fully self contained and written in a lively fashion the book will appeal to a wide variety of readers from novice to specialist The Universal Pattern Within History Rachamim Dayan, 2002-09-23 This book is a work of synthesis which argues that an all encompassing blueprint governs the evolution of all parts of our universe In its first half it discerns interdisciplinary symmetry in the early development of history and six other disciplines It then uses this discovery to formulate testable predictions about the form and content of later history In its second half the book attempts to verify these intimations of our more recent past and to envision the human future that lies ahead Contents INTRODUCTION 13 Part I EARLY HISTORY 1 PERIOD 0 THE HOMINOIDS 19 2 PERIOD 1 THE PALEOLITHIC ECONOMY 43 3 PERIOD 1 THE PALEOLITHIC SUPERSTRUCTURE 64 4 A METAPHORICAL SYNOPSIS OF THE PALEOLITHIC PERIOD 72 5 PERIOD 2 THE NEOLITHIC ECONOMY 84 6 PERIOD 2 THE NEOLITHIC SUPERSTRUCTURE 96 7 A METAPHORICAL SYNOPSIS OF THE NEOLITHIC PERIOD 102 8 PERIOD 3 THE BRONZE AGE SUPERSTRUCTURE 110 9 PERIOD 3 THE BRONZE AGE ECONOMY 119 10 A METAPHORICAL SYNOPSIS OF THE BRONZE AGE 134 Part II INTERDISCIPLINARY DEVELOPMENT SYMMETRY Early Supernatural Development 11 SUPERNATURAL PERIOD 1 THE TOTEM BASE 149 12 SUPERNATURAL PERIOD 1 THE TOTEM SUPERSTRUCTURE 163 13 A METAPHORICAL SYNOPSIS OF THE TOTEM PERIOD 168 14 SUPERNATURAL PERIOD 2 THE MOTHER GODDESS BASE 172 15 SUPERNATURAL PERIOD 2 THE MOT Science and the Building of a New Japan M. Low, 2005-08-05 This book highlights the importance of individuals in the shaping of postwar Japan by providing an historical account of how physicists constituted an influential elite An history of science perspective provides insight into their role helping us to

understand the hybrid identity of Japanese scientists and how they reinvented not only themselves but also Japan The book is special in that it uses the history of science to deal with issues relating to Japanese identity and how it was transformed in the decades after Japan's defeat It explores the lives and work of seven physicists two of whom were Nobel prize winners It makes use of little known Occupation period documents personal papers of physicists and Japanese language source material

Topological Solitons Nicholas Manton, Paul Sutcliffe, 2004-06-10 Topological solitons occur in many nonlinear classical field theories They are stable particle like objects with finite mass and a smooth structure Examples are monopoles and Skyrmions Ginzburg Landau vortices and sigma model lumps and Yang Mills instantons This book is a comprehensive survey of static topological solitons and their dynamical interactions Particular emphasis is placed on the solitons which satisfy first order Bogomolny equations For these the soliton dynamics can be investigated by finding the geodesics on the moduli space of static multi soliton solutions Remarkable scattering processes can be understood this way The book starts with an introduction to classical field theory and a survey of several mathematical techniques useful for understanding many types of topological soliton Subsequent chapters explore key examples of solitons in one two three and four dimensions The final chapter discusses the unstable sphaleron solutions which exist in several field theories

Selected Papers of Kun Huang Kun Huang, Bang-fen Zhu, 2000 Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph Dynamical

Theory of Crystal Lattices During his years of active research he has made many important contributions to solid state physics The present collection of papers is selected at his own choice as representing his most influential works Thus one finds included his pioneering work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes later known as polariton the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation his early prediction of diffuse X ray scattering due to crystal defects and his recent research works on low dimensional semiconductor structures etc Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work background motivation and rationale involved etc Thus he was led to write a commentary which is published alongside the papers

QED and the Men Who Made It S. S. Schweber, 2020-05-05 In the 1930s physics was in a crisis There appeared to be no way to reconcile the new theory of quantum mechanics with Einstein's theory of relativity Several approaches had been tried and had failed In the post World War II period four eminent physicists rose to the challenge and developed a calculable version of quantum electrodynamics QED probably the most successful theory in physics This formulation of QED was pioneered by Freeman Dyson Richard Feynman Julian Schwinger and Sin Itiro Tomonaga three of whom won the Nobel Prize for their work In this book physicist and historian Silvan Schweber tells the story of these four physicists blending discussions of their scientific work with fascinating biographical sketches Setting the achievements of these four men in context Schweber begins with an account of the early work done by physicists such as Dirac and Jordan and describes the gathering of eminent theorists at Shelter Island in 1947 the meeting that heralded the new era of QED The rest of his narrative comprises individual biographies of the four physicists discussions of their major contributions and the story of the scientific community in which they worked Throughout Schweber draws on his technical expertise to offer a lively and lucid explanation of how this theory was finally established as the appropriate way to describe the atomic and subatomic realms

Selected Papers (1945-1980) Of Chen Ning Yang (With Commentary) Chen Ning Yang, 2005-08-22 A remarkable personal and professional chronicle by one of today's leading physicists this is a collection of Chen Ning Yang's personally selected papers supplemented by his insightful commentaries Including previously unpublished or hard to find works this volume contains Yang's important papers on statistical physics

nuclear forces and particle physics Among them are his seminal work with T D Lee on the nonconservation of parity for which they won the Nobel Prize and his work with R L Mills which led to modern gauge theories with their exciting prospects for the broad unification of field theories The commentaries were written especially for this volume and provide a fascinating account of Yang s development as a physicist as well as a look at many important physicists of the 20th century They trace the development of Yang s interests and ideas from his graduate school days to the present showing how he worked with his colleagues and how their physics came into being Together the papers and commentaries in this unique collection comprise a powerful personal statement shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry **Nuclear Science Abstracts** ,1974-07
