Elements of Fuel Oil and Steam Engineering Robert Sibley, 2015-08-05
Excerpt from *Elements of Fuel Oil and Steam Engineering: A Practical Treatise Dealing With Fuel Oil for the Central Station Man, the Power Plant Operator, the Mechanical Engineer, and the Student*. The rapidity with which the first edition of this book was exhausted has exceeded the fondest expectations of its writers. The field of fuel oil in its uses in steam electric generation, though an important one, is somewhat narrow in the number of people involved in its study. The early exhaustion of the first edition, however, has given the authors an opportunity to re-write the book and to add many new and interesting advances that have been made during the three year period since the first edition appeared upon the market. We are particularly grateful to Prof. L. S. Marks of Harvard University, to Prof. W. F. Durand of Stanford University, Mr. C. R. Weymouth, chief engineer of Charles C. Moore Messrs. R. J. C. Wood and H. L. Doolittle of the Southern California Edison Company, Mr. E. A. Rogers, chief engineer of steam electric generation for the New Cornelia Copper Co., Mr. E. H. Peabody, consulting engineer, Prof. E. H. Lockwood of Yale, Dr. D. S. Jacobus, advisory engineer of the Babcock and Wilcox Company, and Mr. J. E. Woodbridge of Ford Bacon and Davis for valuable information, helpful suggestions, and a kindly and encouraging attitude for further efforts in the compilation of this work. Many of the newer portions of this work have first appeared in print either in the columns of the *Electrical World* or the *Journal of Electricity*, and to these two publications we are grateful for the interest and kindly suggestions they have given to us.
