Ince, 2012-12-06 Among the space activities of the last three decades satellite communications SATCOM has found the widest
application in meeting both civil and military communications requirements Several international regional and national
SATCOM systems of increasing capacity capability and complexity have been and are being implemented over the years The
latest versions are utilizing such concepts as spot beams processing transponders in SS TDMA and operations in different
frequency bands including the EHF band On the military side the United States of America the United Kingdom France and
NATO the North Atlantic Treaty Organisation have been the only owners and operators of military SATCOM systems in the
West The systems in being and under development use satellites and ground terminals with characteristics which differ from
the civilian ones with respect to frequency bands utilised and survivability and interoperability The SATCOM has given the
military users the potential of having much needed mobility flexibility and survivability in strategic and tactical
communications for land sea and air operations It must however be said particularly for the military SATCOM systems that
they have been evolved in big jumps both in time and capability each jump involving the deployment of two or three often
specially designed large satellites large expenses and rather traumatic transition between jumps Despite these undesirable
features these systems did not have the required degree of suevivability and flexibility **Elements of Digital Satellite
