Research topics in software evolution and maintenance , Intelligent Decision Systems in Large-Scale Distributed Environments Pascal Bouvry, Horacio González-Vélez, Joanna Kołodziej, 2011-06-19 One of the most challenging issues for the intelligent decision systems is to effectively manage the large scale complex distributed environments such as computational clouds grids ad hoc and P2P networks under the different types of users their relations and real world uncertainties In this context the IT resources and services usually belong to different owners institutions enterprises or individuals and are managed by different administrators These administrators conform to different sets of rules and

configuration directives and can impose different usage policies on the system users. Additionally, uncertainties are presented in various types of information that are incomplete, imprecise, fragmentary, or overloading, which hinders the full and precise determination of the evaluation criteria, their subsequent selection, the assignment scores, and eventually the final integrated decision result. This book presents new ideas, analysis, implementations, and evaluation of the next generation intelligent techniques for solving complex decision problems in large-scale distributed systems. In 15 chapters, several important formulations of the decision problems in heterogeneous environments are identified, and a review of the recent approaches from game-theoretical models and computational intelligent techniques such as genetic, memetic, and evolutionary algorithms to intelligent multi-agent systems and networking are presented. We believe that this volume will serve as a reference for the students, researchers, and industry practitioners working in or are interested in joining interdisciplinary works in the areas of intelligent decision systems using emergent distributed computing paradigms. It will also allow newcomers to grasp key concerns and potential solutions on the selected topics.

Principles of Health Interoperability HL7 and SNOMED Tim Benson,2010-05-06 Joined up healthcare makes information available when and where it is needed to improve safety efficiency and effectiveness Politicians may take interoperability between healthcare computer systems for granted but it is non trivial Healthcare integration projects are notoriously under estimated and come in over budget and over time Joined up healthcare depends on standards The two leading standards are the SNOMED CT which is a clinical terminology semantics and HL7 Version 3 which is a specialised healthcare interoperability language syntax Both are new complex and fit for purpose Tim Benson believes there is an unmet need for a book on Healthcare Integration Some health informatics textbooks include chapters on HL7 and or SNOMED but these are usually quite short and cannot provide even an adequate introduction There is little of much value on the Internet or in journals or conference proceedings
