Einsteins Clocks Poincares Maps Empires:

Einstein's Clocks, Poincaré's Maps Peter Galison, 2004 In May 1905 Einstein published his theory of relativity changing time forever This title is a dramatic account of the quest to synchronize time that culminated in the revolutionary theory As Peter Galison argues relativity was borne of urgent practical necessity Clocks and trains telegraphs and colonial conquest the challenges of the late 19th century provided an indispensable real world background to the theoretical breakthrough Europe's burgeoning rail network Only a century ago the continent had hundred of time zones and no universal system for synchronizing them Given that local time could vary from town to town scheduling rail services was hard but vital not least to stop trains from colliding as they hurtled in opposite directions along single tracks In his role as president of the French Bureau of Longitude a remit of which was to map colonial Africa Henri Poincare grappled with a similar issue Synchronized clocks set by telegraph signal from Paris were necessary to determine longitude and provide the precise coordinates his cartographers needed to tell the story of these two giants whose concrete preoccupations engaged them in a silent race towards a theory that overturned 200 years received thinking *Einstein's Clocks, Poincaré's Maps* Peter Louis Galison, 2003 In May 1905 Albert Einstein changed time forever his theory of relativity had practical consequences that changed the world Only a century ago Europe had a huge number of local time zones and no proper system of synchronizing them This threatened chaos particularly on the railways and communications Synchronized time was necessary to create timetables for passengers and stop trains from crashing as they hurtled in opposite directions along single tracks

Einstein's Clocks and Poincare's Maps: Empires of Time Peter Galison, 2004-09-17 More than a history of science it is a tour de force in the genre New York Times Book Review A dramatic new account of the parallel quests to harness time that culminated in the revolutionary science of relativity Einstein's Clocks Poincaré's Maps is part history part science part adventure part biography part meditation on the meaning of modernity In Galison's telling of science the meters and wires and epoxy and solder come alive as characters along with physicists engineers technicians and others Galison has unearthed fascinating material New York Times Clocks and trains telegraphs and colonial conquest the challenges of the late nineteenth century were an indispensable real world background to the enormous theoretical breakthrough of relativity And two giants at the foundations of modern science were converging step by step on the answer Albert Einstein an young obscure German physicist experimenting with measuring time using telegraph networks and with the coordination of clocks at train stations and the renowned mathematician Henri Poincaré president of the French Bureau of Longitude mapping time coordinates across continents Each found that to understand the newly global world he had to determine whether there existed a pure time in which simultaneity was absolute or whether time was relative Esteemed historian of science Peter Galison has culled new information from rarely seen photographs forgotten patents and unexplored archives to tell the fascinating story of two scientists whose concrete professional preoccupations engaged them in a silent race toward a theory that would conquer the

empire of time **The Physicist and the Philosopher** Jimena Canales, 2016-10-04 The explosive debate that transformed our views about time and scientific truth On April 6 1922 in Paris Albert Einstein and Henri Bergson publicly debated the nature of time Einstein considered Bergson's theory of time to be a soft psychological notion irreconcilable with the quantitative realities of physics Bergson who gained fame as a philosopher by arguing that time should not be understood exclusively through the lens of science criticized Einstein's theory of time for being a metaphysics grafted on to science one that ignored the intuitive aspects of time The Physicist and the Philosopher tells the remarkable story of how this explosive debate transformed our understanding of time and drove a rift between science and the humanities that persists today Jimena Canales introduces readers to the revolutionary ideas of Einstein and Bergson describes how they dramatically collided in Paris and traces how this clash of worldviews reverberated across the twentieth century She shows how it provoked responses from figures such as Bertrand Russell and Martin Heidegger and carried repercussions for American pragmatism logical positivism phenomenology and quantum mechanics Canales explains how the new technologies of the period such as wristwatches radio and film helped to shape people's conceptions of time and further polarized the public debate She also discusses how Bergson and Einstein toward the end of their lives each reflected on his rival's legacy Bergson during the Nazi occupation of Paris and Einstein in the context of the first hydrogen bomb explosion The Physicist and the Philosopher is a magisterial and revealing account that shows how scientific truth was placed on trial in a divided century marked by a new sense of time **Objectivity** Lorraine Daston, Peter L. Galison, 2021-02-02 Objectivity has a history and it is full of surprises In Objectivity Lorraine Daston and Peter Galison chart the emergence of objectivity in the mid nineteenth century sciences and show how the concept differs from alternatives truth to nature and trained judgment This is a story of lofty epistemic ideals fused with workaday practices in the making of scientific images From the eighteenth through the early twenty first centuries the images that reveal the deepest commitments of the empirical sciences from anatomy to crystallography are those featured in scientific atlases the compendia that teach practitioners of a discipline what is worth looking at and how to look at it Atlas images define the working objects of the sciences of the eye snowflakes galaxies skeletons even elementary particles Galison and Daston use atlas images to uncover a hidden history of scientific objectivity and its rivals Whether an atlas maker idealizes an image to capture the essentials in the name of truth to nature or refuses to erase even the most incidental detail in the name of objectivity or highlights patterns in the name of trained judgment is a decision enforced by an ethos as well as by an epistemology As Daston and Galison argue atlases shape the subjects as well as the objects of science To pursue objectivity or truth to nature or trained judgment is simultaneously to cultivate a distinctive scientific self wherein knowing and knower converge Moreover the very point at which they visibly converge is in the very act of seeing not as a separate individual but as a member of a particular scientific community Embedded in the atlas image therefore are the traces of consequential choices about knowledge persona and collective sight Objectivity is a

book addressed to any one interested in the elusive and crucial notion of objectivity and in what it means to peer into the world scientifically **The Scientist as Rebel** Freeman Dyson, 2014-08-26 33 essays on the fads and fantasies of science and scientists including climate prediction genetic engineering space colonization and paranormal phenomena by the iconoclastic physicist who has become one of science's most eloquent interpreters New York Times Provocative touching and always surprising Wired Magazine From Galileo to today's amateur astronomers scientists have been rebels writes Freeman Dyson Like artists and poets they are free spirits who resist the restrictions their cultures impose on them In their pursuit of nature's truths they are guided as much by imagination as by reason and their greatest theories have the uniqueness and beauty of great works of art Dyson argues that the best way to understand science is by understanding those who practice it He tells stories of scientists at work ranging from Isaac Newton's absorption in physics alchemy theology and politics to Ernest Rutherford's discovery of the structure of the atom to Albert Einstein's stubborn hostility to the idea of black holes His descriptions of brilliant physicists like Edward Teller and Richard Feynman are enlivened by his own reminiscences of them He looks with a skeptical eye at fashionable scientific fads and fantasies and speculates on the future of climate prediction genetic engineering the colonization of space and the possibility that paranormal phenomena may exist yet not be scientifically verifiable Dyson also looks beyond particular scientific questions to reflect on broader philosophical issues such as the limits of reductionism the morality of strategic bombing and nuclear weapons the preservation of the environment and the relationship between science and religion These essays by a distinguished physicist who is also a prolific writer offer informed insights into the history of science and fresh perspectives on contentious current debates about science ethics and faith **Lost in the Shadow of the Word** Benjamin Paloff, 2016-12-15 2018 AATSEEL Prize for Best Book in Literary

Scholarship Scholars of modernism have long addressed how literature painting and music reflected the radical reconceptualization of space and time in the early twentieth century a veritable revolution in both physics and philosophy that has been characterized as precipitating an epistemic trauma around the world In this wide ranging study Benjamin Paloff contends that writers in Central and Eastern Europe felt this impact quite distinctly from their counterparts in Western Europe For the latter the destabilization of traditional notions of space and time inspired works that saw in it a new kind of freedom However for many Central and Eastern European authors who were writing from within public discourses about how to construct new social realities the need for escape met the realization that there was both nowhere to escape to and no stable delineation of what to escape from In reading the prose and poetry of Czech Polish and Russian writers Paloff imbues the term Kafkaesque with a complexity so far missing from our understanding of this moment in literary history

The Turn to Transcendence Glenn W. Olsen, 2012-07-30 Phenomenal A must read for us who desire to topple the dictatorship of relativism and culture of death and replace it with the only alternative The Imaginative Conservative Especially concerned with the public nature of religion historian Glenn W Olsen author of *Christian Marriage A Historical Study* and *On the Road to Emmaus* The Catholic Dialogue with American and Modernity sets forth an exhaustively researched and persuasive account of how religion has been reshaped in the modern period *The Turn to Transcendence* traces both the loss of transcendence and attempts to recover it while making its own proposals Neither reactionary nor modernist it questions how under conditions of modern life some form of the sacred and some form of the secular might both flourish at the same time But it also provides a warning that a religion unable to maintain itself with its own overt architecture language and calendars against an enveloping secular culture is destined for oblivion Glenn Olsen s book could hardly be more pivotal or insightful Confronting the growing amnesia regarding culture s religious origin and transcendent purpose Olsen proves both a masterful cartographer of modernity and a visionary of a culture that encourages and enables us to seek beyond ourselves Carl A Anderson Supreme Knight of the Knights of Columbus A brilliant book It rests on an amazing amount of scholarship that is wide ranging in history literature art science music theology and philosophy James Hitchcock professor of history St Louis University **The Cosmic Time of Empire** Adam Barrows, 2011 Combining original historical research with literary analysis Adam Barrows takes a provocative look at the creation of world standard time in 1884 and rethinks the significance of this remarkable moment in modernism for both the processes of imperialism and for

modern literature As representatives from twenty four nations argued over adopting the Prime Meridian and thereby measuring time in relation to Greenwich England writers began experimenting with new ways of representing human temporality Barrows finds this experimentation in works as varied as Victorian adventure novels high modernist texts and South Asian novels including the work of James Joyce Virginia Woolf H Rider Haggard Bram Stoker Rudyard Kipling and Joseph Conrad Demonstrating the investment of modernist writing in the problems of geopolitics and in the public discourse of time Barrows argues that it is possible and productive to rethink the politics of modernism through the politics of time

Albert Einstein , The Complete Idiot's Guide to Understanding Einstein Gary Moring, 2004 Offer a basic introduction to physics and explains Einstein s scientific theories in laymen s terms including his theory of general relativity and exploration of quantum mechanics How Einstein Created Relativity out of Physics and Astronomy David

Topper, 2012-09-27 This book tracks the history of the theory of relativity through Einstein s life with in depth studies of its background as built upon by ideas from earlier scientists The focus points of Einstein s theory of relativity include its development throughout his life the origins of his ideas and his indebtedness to the earlier works of Galileo Newton Faraday Mach and others the application of the theory to the birth of modern cosmology and his quest for a unified field theory Treading a fine line between the popular and technical but not shying away from the occasional equation this book explains the entire range of relativity and weaves an up to date biography of Einstein throughout The result is an explanation of the world of relativity based on an extensive journey into earlier physics and a simultaneous voyage into the mind of Einstein written for the curious and intelligent reader Networking Operatic Italy Francesca Vella, 2022-01-26 A study of the

networks of opera production and critical discourse that shaped Italian cultural identity during and after Unification Opera s role in shaping Italian identity has long fascinated both critics and scholars Whereas the romance of the Risorgimento once spurred analyses of how individual works and styles grew out of and fostered specifically Italian sensibilities and modes of address more recently scholars have discovered the ways in which opera has animated Italians social and cultural life in myriad different local contexts In Networking Operatic Italy Francesca Vella reexamines this much debated topic by exploring how where and why opera traveled on the mid nineteenth century peninsula and what this mobility meant for opera Italian cities and Italy alike Focusing on the 1850s to the 1870s Vella attends to opera s encounters with new technologies of transportation and communication as well as its continued dissemination through newspapers wind bands and singing human bodies Ultimately this book sheds light on the vibrancy and complexity of nineteenth century Italian operatic cultures challenging many of our assumptions about an often exoticized country *The Making of Modern Physics in Colonial India* Somaditya Banerjee, 2020-05-14 This monograph offers a cultural history of the development of physics in India during the

first half of the twentieth century focusing on Indian physicists Satyendranath Bose 1894 1974 Chandrasekhara Venkata Raman 1888 1970 and Meghnad Saha 1893 1956 The analytical category bhadralok physics is introduced to explore how it became possible for a highly successful brand of modern science to develop in a country that was still under colonial domination The term Bhadrakalok refers to the then emerging group of native intelligentsia who were identified by academic pursuits and manners Exploring the forms of life of this social group allows a better understanding of the specific character of Indian modernity that as exemplified by the work of bhadralok physicists combined modern science with indigenous knowledge in an original program of scientific research The three scientists achieved the most significant scientific successes in the new revolutionary field of quantum physics with such internationally recognized accomplishments as the Saha ionization equation 1921 the famous Bose Einstein statistics 1924 and the Raman Effect 1928 the latter discovery having led to the first ever Nobel Prize awarded to a scientist from Asia This book analyzes the responses by Indian scientists to the radical concept of the light quantum and their further development of this approach outside the purview of European authorities The outlook of bhadralok physicists is characterized here as cosmopolitan nationalism which allows us to analyze how the group pursued modern science in conjunction with and as an instrument of Indian national liberation
