Studies on Mexican Paleontology Francisco J. Vega,Torrey G. Nyborg,María del Carmen Perrilliat,Marisol Montellano-Ballesteros,Sergio R.S. Cevallos-Ferriz,Sara A. Quiroz-Barroso,2006-07-15 During the last few years the number of contributions to the Paleontology of Mexico has increased considerably Paleontological work in Mexico has been focused on providing important information for petroleum exploration and specific studies dealing with pollen foraminifera radiolaria dinoflagellates rudists and ammonites Often these reports were published only in local or regional journals and therefore not available to the scientific community at large The purpose of this book is to offer an updated review of the fossil groups from Mexico providing their significance to the stratigraphy tectonics sedimentology evolution and paleontology of Mexico whose study has proved to be relevant in stratigraphy tectonics sedimentology and evolution The fossil record of Mexico ranges from Precambrian to Pleistocene Almost every Mexican State has reported fossil localities with ongoing studies and potential for the discovery of new localities Even those localities that have been studied since the eighteen century such as the early Cretaceous San Juan Raya have recently reported new fossil groups Unfortunately much of the fossil reports from Mexico have been published in Spanish from local journals which represent a language barrier to the international community There is little doubt that the paleontological history of Mexico deserves to be known in other countries By making this book available to the international scientific community we hope that interest in the fossil record of Mexico will grow **The**

Invasive Exotic Species in the Sonoran Region

Barbara Tellman, 2023-12-05 All over the planet organisms of many species are appearing outside of their natural habitats often carried by that particularly peripatetic species *Homo sapiens* This book marks the first comprehensive attempt to address problems posed by expanding populations of exotic plant and animal species in the Sonoran Desert and adjacent grasslands and riparian areas It describes the arrival and spread of non-native species as diverse as rats and saltcedar covering both their impacts and the management of those impacts It is estimated that as much as 60 percent of the vegetative cover of the Sonoita Creek Patagonia Reserve the first Nature Conservancy area designated in Arizona is dominated by exotic plants and that introduced fish pose a recurrent threat to the native fish of that area Meanwhile at the Grand Canyon invasives such as tamarisk, red brome, carp and catfish are pervasive either in the Colorado River or in the patches of desert scrub along its shores Throughout the Sonoran Desert and adjacent areas from islands in the Sea of Cortés to desert grasslands some six hundred species of non-native plants and animals have become established with bullfrogs and Mediterranean grasses now common where they once never existed The book brings together contributors from academia, government and nonprofit organizations including such experts as Gary Paul Nabhan, Richard Mack and Alberto B. Ríquez Montijo They review historic and even prehistoric origins of non-native species not only exotic plants, amphibians and mammals but also insects, fish and birds They then examine significant problems in each major subregion and ecosystem and discuss control efforts The volume contains the first compiled list of more than 500 naturalized exotic species in the Sonoran region Invasive species issues are rapidly emerging as major environmental concerns both locally and worldwide This book assists professionals, ecologists, conservation biologists and policy makers involved in invasive species control in the Southwest and will be a rich resource for all concerned with protecting native species and their habitats
