Einführung In Die Laser Mikro Emissions:

Atomic Emission Spectrometry Heinz-Gerd Joosten, Alfred Golloch, Jörg Flock, Susan Killewald, 2020-03-09 Atomic Emission Spectrometry is a powerful analytical method which is utilized in academia and industry for quantitative and qualitative elemental analysis This publication is an excellent guide to the technique explaining the underlying theory and covering practical measurement applications Extremely well written and organized this book is a beneficial instrument for every scientist or professional working with AES

Guide-Lines to Planning Atomic Spectrometric Analysis B. Magyar, 2012-12-02 Studies in Analytical Chemistry Volume 4 Guide Lines to Planning Atomic Spectrometric Analysis covers the physico chemical background of atomic absorption spectrometry AAS and atomic emission spectrometry AES This book is composed of six chapters and begins with an introduction to the criteria on choosing the best and most suitable method for solving a given analytical problem The next chapters deal with the properties generation and absorption of electromagnetic radiation as well as the theory of atomic spectra that require knowledge of X ray Other chapters discuss the broadening of atomic lines which is important for understanding that calibration curves in AAS are always bent A chapter examines the sensitivity of determination by AAS and AES The last chapter describes the spectrometric measurement of atomic absorption and emission This chapter also looks into the influence of the design of the monochromator upon the measured emission intensity and calibration curve by AAS This book will prove useful to analytical chemists and researchers

Analytical Chemistry in Space Richard E. Wainerdi, 2013-10-22 Analytical Chemistry in Space presents an analysis of the chemical constitution of space particularly the particles in the solar wind of the planetary atmospheres and the surfaces of the moon and planets Topics range from space engineering considerations to solar system atmospheres and recovered extraterrestrial materials Mass spectroscopy in space exploration is also discussed along with lunar and planetary surface analysis using neutron inelastic scattering This book is comprised of seven chapters and opens with a discussion on the possibilities for exploration of the solar system by mass spectroscopy with particular reference to analysis of compositional data on solar system objects such as the Earth and meteorites asteroids comets and interplanetary dust The reader is then introduced to the project administration instrument design and spacecraft integration problems that must be solved to successfully fly a space experiment The following chapters focus on the atmospheres of the sun and planets the use of mass spectroscopy in solar system exploration and of neutron inelastic scattering in lunar and planetary surface analysis and extraterrestrial in situ 14 MeV neutron activation analysis The final chapter is devoted to the advantages and applications of thermal neutron activation to the analysis of certain samples of geological interest This monograph will be a useful resource for analytical chemists and space scientists
