Making Local Food Work Brandi Janssen, 2017-04-15 When it comes to local food it takes more than knowing your farmer Brandi Janssen takes on some of the myths about how the local food system works and what it needs to thrive Advocates claim that small biodiverse farms will fundamentally change farming rural communities and the American diet For many simply by knowing our farmers we become champions of a new way of eating that revolutionizes our economy and society But that argument ignores the fact that if local food is to succeed it requires many of the trappings of conventional food production including processors middle men inspectors and regulators By listening to and working alongside people trying to build a local food system in Iowa Janssen uncovers the complex realities of making it work Although the state is better known for its vast fields of conventionally grown corn and soybeans it has long boasted a robust network of small diverse farms community supported agriculture enterprises and farmers markets As she picks tomatoes processes wheatgrass and joins a parents committee trying to buy local lettuce for a school lunch Janssen asks how small farmers and CSA owners deal with farmers market regulations neighbors who spray pesticides on crops or lawns and sanitary regulations on meat processing and milk production How can they meet the needs of large buyers like school districts Who does the hard work of planting weeding harvesting and processing Is local food production benefitting rural communities as much as advocates claim In answering these questions Janssen displays the pragmatism and level headedness one would expect of the heartland much like the farmers and processors profiled here It s doable she states

but we're going to have to do more than shop at our local farmers market to make it happen This book is an ideal introduction to what local food means today and what it might be tomorrow **Net Zero, Food and Farming** Neil Ward, 2022-08-04 This book examines the implications of the net zero transition for food and farming in the UK and how these can be managed to avoid catastrophic climate change in the crucial decades ahead For the UK to meet its international obligations for reducing greenhouse gas emissions nothing short of a revolution is required in our use of land our farming practices and our diet Taking a historical approach the book examines the evolution of agriculture and the food system in the UK over the last century and discusses the implications of tackling climate change for food farming and land use setting the UK situation in an international context The chapters analyse the key challenges for this transition including dietary change and food waste afforestation and energy crops and low emission farming practices This historical perspective helps develop an understanding of how our food farming and land use system has evolved to be the way that it is and draws lessons for how the agri food system could evolve further to support the transition to net zero and avoid catastrophic climate change Written in a clear and accessible style this book will be essential reading to students and scholars of food agriculture and the environment as well as policymakers and professionals involved climate change policy and the agriculture and food industry

Benchmarking in Food and Farming Dr Lisa Jack, 2012-09-28 At a time when food producers have to make significant changes to their businesses in order to survive a review of benchmarking in agriculture and discussion of its future potential is critical This book meets that need by providing an overview of existing benchmarking practices in agriculture and the food supply chain and evaluating the potential of these practices to drive sustainable innovation in food and farming Increasing pressures from commodity markets corporate buyers government and rising input prices particularly fuel prices are creating an environment in which farmers and their advisors are keen to make greater use of performance information for survival and growth Where farmers are diversifying into alternative production methods non agricultural enterprises and on farm production and sales the greater the interest in a wider range of accounting tools for decision making Lisa Jack and her contributors draw on a wide range of data and sources from Australia New Zealand the USA the UK and Europe to provide critical evaluations of what might be considered state of the art benchmarking practices at this time including recent strategic developments such as the use of non financial measures in balanced scorecards The food and farming industry is unusual in that benchmarking takes place among large numbers of small family owned businesses working in a global industry Not only therefore is this book important for those working in food supply chain businesses but also for those involved in the general practice of benchmarking **Foodopoly** Wenonah Hauter, 2014-03-04 Wenonah Hauter runs an organic family farm in Northern Virginia that provides healthy vegetables to over five hundred families Despite this as one of the nation's leading healthy food advocates Hauter believes that the local food movement is not enough to solve America's food crisis and the public health debacle it has created In Foodopoly she takes aim at the real culprit the massive

consolidation and corporate control of food production which prevents farmers from raising healthy crops and limits the choices that people can make in the grocery store **Demystifying Food from Farm to Fork** Maurice J. Hladik, 2012 In North America and elsewhere there is a growing concern by many that they are no longer connected in any meaningful way with the production or processing of the food they consume Furthermore many sources portray a negative bias regarding the production transport processing and marketing of today's food In **DEMYSTIFYING FOOD FROM FARM TO FORK** author Maurice J Hladik examines a plethora of issues surrounding the agricultural industry It answers the questions of what is food what does farm to market really mean and whether the food we eat is safe It also discusses the controversies and socioeconomic concerns surrounding food and the food supply such as the role of government farming environment and biodiversity genetically modified food organic foods the 100 mile diet weather climate and food and animal and poultry welfare Hladik a descendant of European farmers who settled on farms in Nebraska Iowa and Minnesota as early as 1834 not only provides a lively discussion of food controversies but also shares hundreds of little known facts about food and farming

Changes in Food and Farming Steve Parker, 2009 Farms are becoming bigger and bigger as more food is needed for the growing population When land is cleared for farming habitats are destroyed and soil can become infertile Then the food has to be stored and transported which costs money and causes pollution It's not all doom and gloom We just need to understand what's happening If everyone wasted less food then there would be more to go round and fewer farms would be needed Plus if food were bought locally then there would be fewer food miles Back cover Amber Waves, 2003 **From the Farm to the Table** Gary H. Holthaus, 2006-12-01 As with other areas of human industry it has been assumed that technological progress would improve all aspects of agriculture Technology would increase both efficiency and yield or so we thought The directions taken by technology may have worked for a while but the same technologies that give us an advantage also create disadvantages It's now a common story in rural America pesticides fertilizers big iron combines and other costly advancements may increase speed but also reduce efficiency while farmers endure debt dangerous working conditions and long hours to pay for the technology Land livelihood and lives are lost in an effort to keep up and break even There is more to this story that affects both the food we eat and our provisions for the future Too many Americans eat the food on their plates with little thought to its origin and in blind faith that government regulations will protect them from danger While many Americans might have grown up in farming families there are fewer family owned farms with each passing generation Americans are becoming disconnected from understanding the sources and content of their food The farmers interviewed in *From the Farm to the Table* can help reestablish that connection Gary Holthaus illuminates the state of American agriculture today particularly the impact of globalization through the stories of farmers who balance traditional practices with innovative methods to meet market demands Holthaus demonstrates how the vitality of America's communities is bound to the successes and failures of its farmers In *From the Farm to the Table* farmers explain how their lives and communities have

changed as they work to create healthy soil healthy animals and healthy food in a context of often inappropriate federal policy growing competition from abroad public misconceptions regarding government subsidies the dangers of environmental damage and genetically modified crops and the myths of modern economics Rather than predicting doom and despair for small American growers Holthaus shows their hope and the practical solutions they utilize As these farmers tell their stories organic and sustainable farming become real and meaningful As they share their work and their lives they reveal how those concepts affect the food we eat and the land on which it s grown and how vital farming is to the American economy

Food, Farms, and Community Lisa Chase,Vern Grubinger,2014-12-02 Throughout the United States people are increasingly concerned about where their food comes from how it is produced and how its production affects individuals and their communities The answers to these questions reveal a complex web of interactions While large distant farms and multinational companies dominate at national and global levels innovative programs including farmers markets farm to school initiatives and agritourism are forging stronger connections between people and food at local and regional levels At all levels of the food system energy use climate change food safety and the maintenance of farmland for the future are critical considerations The need to understand food systems what they are who s involved and how they work or don t has never been greater Food Farms and Community Exploring Food Systems takes an in depth look at critical issues successful programs and challenges for improving food systems spanning a few miles to a few thousand miles Case studies that delve into the values that drive farmers food advocates and food entrepreneurs are interwoven with analysis supported by the latest research Examples of entrepreneurial farms and organizations working together to build sustainable food systems are relevant to the entire country and reveal results that are about much more than fresh food

Resetting the Table Robert Paarlberg,2021-02-02 A bold science based corrective to the groundswell of misinformation about food and how it s produced examining in detail local and organic food food companies nutrition labeling ethical treatment of animals environmental impact and every other aspect from farm to table Consumers want to know more about their food including the farm from which it came the chemicals used in its production its nutritional value how the animals were treated and the costs to the environment They are being told that buying organic foods unprocessed and sourced from small local farms is the most healthful and sustainable option Now Robert Paarlberg reviews the evidence and finds abundant reason to disagree He delineates the ways in which global food markets have in fact improved our diet and how industrial farming has recently turned green thanks to GPS guided precision methods that cut energy use and chemical pollution He makes clear that America s serious obesity crisis does not come from farms or from food deserts but instead from food swamps created by food companies retailers and restaurant chains And he explains how though animal welfare is lagging behind progress can be made through continued advocacy more progressive regulations and perhaps plant based imitation meat He finds solutions that can make sense for farmers and consumers alike and provides a road map through the rapidly changing worlds of food

and farming laying out a practical path to bring the two together **Holy Cows and Hog Heaven** Joel Salatin, 2004-09-28 Holy Cows and Hog Heaven is written by an honest to goodness dirt under the fingernails optimistic clean good farmer His goal is to Empower food buyers to pursue positive alternatives to the industrialized food system Bring clean food farmers and their patrons into a teamwork relationship Marry the best of western technology with the soul of eastern ethics Educate food buyers about productions Create a food system that enhances nature s ecology for future generations Holy Cows and Hog Heaven has an overriding objective of encouraging every food buyer to embrace the notion that menus are a conscious decision creating the next generation s world one bite at a time *Food, Farming, and Faith* Gary W. Fick, 2008-03-06 Using scripture and science a Christian agricultural scientist presents an ethic of farming that promotes good food and a healthy environment *Farmers' Cooperatives and Sustainable Food Systems in Europe* Raquel Ajates Gonzalez, 2018-06-13 Farmers cooperatives are very prevalent in the European Union where they account for approximately half of agricultural trade and thus are key to articulating rural realities and in shaping the sustainability credentials of European food and farming This book analyses to what extent farmers cooperatives are working to benefit their members are showing concern for their communities and are promoting cooperative economies It offers a multilevel set of theoretical disciplinary methodological empirical and social perspectives using the UK and Spain as contrasting examples and analyses whether agricultural cooperatives contribute to achieving sustainable food systems The book presents empirical data from diverse and rich case studies from large international cooperatives to small multi stakeholder initiatives This provides an alternative viewpoint to that of economics which tends to dominate the study of agricultural cooperatives The author presents a new theoretical framework that provides a novel lens to study farmers cooperatives as organisations deeply embedded in power dynamics of the food system and agricultural policy that shape and constraint their potential to adopt cooperative and sustainable practices The book is a major addition to the study of agricultural cooperatives and their impact in the development of fairer and more sustainable food systems and it is one of the first detailed accounts of multi stakeholder food and farming cooperatives in Europe It is a valuable resource for all scholars working on cooperatives as well as for students studying agricultural and food policy environmental justice and rural sociology **Hungry for Profit** Fred Magdoff, John Bellamy Foster, Frederick H. Buttel, 2000-09-01 Millions go hungry every year in both poor and rich nations yet hundreds of thousands of peasants and farmers continue to be pushed off the land Applied in increasing volumes chemical pesticides and synthetic fertilizers deplete the soil pollute our food and water and leave crops more vulnerable to pest outbreaks The new and expanding use of genetically engineered seeds threatens species diversity This penetrating set of essays explains why corporate agribusiness is a rising threat to farmers the environment and consumers Ranging in subject from the politics of hunger to the new agricultural biotechnologies and in time and place from early modern Europe to contemporary Cuba the contributions to Hungry for Profit examine the changes underway in world agriculture today and point the way toward
