Food Safety in China Joseph Jwu-Shan Jen, Junshi Chen, 2017-05-08 From contaminated infant formula to a spate of all too familiar headlines in recent years food safety has emerged as one of the harsher realities behind China's economic miracle Tainted beef horse meat and dioxin outbreaks in the western world have also put food safety in the global spotlight Food Safety in China Science Technology Management and Regulation presents a comprehensive overview of the history and current state of food safety in China along with emerging regulatory trends and the likely future needs of the country Although the focus is on China global perspectives are presented in the chapters and 33 of the 99 authors are from outside of China Timely and illuminating this book offers invaluable insights into our understanding of a critical link in the increasingly globalized complex food supply chain of today's world

Ensuring Global Food Safety Christine Boisrobert, Sangsuk Oh, Aleksandra Stjepanovic, Huub Lelieveld, 2009-11-11 Taking into account toxicity levels at normal consumption levels intake per kg bodyweight and other acknowledged considerations each chapter in this book will be based on one or more proven examples It is intended to provide specific examples and potential improvements to the safety of the world's food supply while also increasing the amount of food available to those in undernourished countries This book is designed to provide science based tools for improving legislation and regulation Reduce amount of food destroyed due to difference in regulations between nations Positively impact the time to market of new food products by recognizing benefit of one rule that applies to all Use the comparison of regulations and resulting consequences to make appropriate fully informed

decisions Employ proven science to obtain global consensus for regulations Understand how to harmonize test protocols and analytical methods for accurate measurement and evaluation Take advantage of using a risk benefit based approach rather than risk avoidance to maximize regulatory decisions *Perspectives and Guidelines on Food Legislation* Jessica Vapnek, Melvin Spreij, 2005-01-01 The increasing globalization of food trade and the harmonization of food standards and food safety rules have led to significant changes in the international and national regulatory frameworks for food There is an increasing recognition of the need to integrate and improve coordination of regulatory activities among national and international bodies for better protection of human animal and plant life and health without creating unnecessary barriers to trade In addition catastrophic outbreaks of food borne disease have sparked increasing attention to the regulatory frameworks for food safety and food trade in the global arena These developments have given rise to new legislative needs National regulatory frameworks have to be adjusted to meet international and regional obligations while the distribution of responsibilities for the food sector requires rigorous review The present text draws on FAO s experience in providing technical assistance to governments developing new food laws and regulations setting out and examining the many elements of the national system which should be taken into account in a comprehensive review of national regulatory frameworks for food Towards that end the text offers concrete recommendations for the preparation of a basic national food law including three variants of a new model food law China Law Deskbook James M. Zimmerman, 2005 *Introduction to Global Food-Safety Law and Regulation* Dario Bevilacqua, 2015-09 The subject of global food safety law and regulation is new evolving and still not definitive On one side it concerns a particular specific sector that despite being connected to several issues and social interests still presents its own specific and original features as a sectorial system of governance It not only concerns consumers health protection and foodborne diseases but also the economic interests behind food and agricultural production such as the free trade of goods At the same time rules concerning food safety are characterized by certain peculiarities the dialectic between producers and consumers interests the scientific grounds and the implication of cultural and traditional insights This makes food safety a crucial issue in administrative regulation as it shows how interests balance works the weight of technical and scientific evaluations in public decisions the level of impartiality and efficiency granted to the citizens and the quality of democratic mechanisms ensured in the decision making Finally as food is as widely known a key issue in the development and the well being of every society the quality of its regulation is always strategic and functional to the welfare of the people That is why the issue of jurisdiction and competence or of interest balancing are in such field always complex delicate and open to conflict On the other side global food safety law and regulation is new because it does not regard only a single closed and united legal order It is not simply national or European and it is not even merely international It is something more Due to the phenomenon of globalization and to the interconnectedness of economies and societies particularly evident in the food sector for the spread of world food trade also the law becomes global

It assumes thus a transnational impact and a universal validity or efficacy Global law is something different than international law It coexists with it but it does not occur merely among States it is above the States and through them Notably it has a particular reflection for national public authorities regulating socio economic sectors in accordance to common principles and rules coming from a new global legal space The approach of this book is problematic and interdisciplinary There are not mere descriptions or definitions While much focus is given to cases disputes controversial issues there is no strict separation among sciences and disciplines while there are many connections to open the mind to different solutions and to understand that a phenomenon can be regulated and viewed according to several views and disciplines all formally legitimate but with different results and framed according to a scientific political or legal approach which sometimes need to be combined together At the end of the book the reader will have useful tools with which to approach the problems and the key issues of food safety law and regulation he she will know more about the functioning of this system and of its actors and will also gain some key elements for understanding and analyzing the globalization of law and of public regulation The book offers an introduction and descriptive definition of the subject an illustration of the main problems and characters through the analysis of three specific legal cases a general and articulated analysis of the legal framework of food safety law and regulation comprising the general principles the positive prescriptions the institutional actors and the informal bodies composing such legal architecture a focus on the main body of global food safety law the Codex Alimentarius Commission and an examination of the main subject of this socio economic field of regulation Librarians ebook available on ProQuest and EBSCO Subject International Law Food Safety Law Trade Law Administrative Law
