Active Food Packaging M.L. Rooney,2012-12-06 Food packaging materials have traditionally been chosen to avoid unwanted interactions with the food During the past two decades a wide variety of packaging materials have been devised or developed to interact with the food These packaging materials which are designed to perform some desired role other than to

provide an inert barrier to outside influences are termed active packaging. The benefits of active packaging are based on both chemical and physical effects. Active packaging concepts have often been presented to the food industry with few supporting results of background research. This manner of introduction has led to substantial uncertainty by potential users because claims have sometimes been based on extrapolation from what little proven information is available. The forms of active packaging have been chosen to respond to various food properties which are often unrelated to one another. For instance, many packaging requirements for post harvest horticultural produce are quite different from those for most processed foods. The object of this book is to introduce and consolidate information upon which active packaging concepts are based. Scientists, technologists, students and regulators will find here the basis of those active packaging materials which are either commercial or proposed. The book should assist the inquirer to understand how other concepts might be applied or where they should be rejected.

Food Packaging Technology Richard Coles, Derek McDowell, Mark J. Kirwan, 2003-08-15. The protection and preservation of a product, the launch of new products or re-launch of existing products, perception of added value to products or services and cost reduction in the supply chain are all objectives of food packaging. Taking into consideration the requirements specific to different products, how can one package successfully meet all of these goals? Food Packaging Technology provides a contemporary overview of food processing and packaging technologies. Covering the wide range of issues you face when developing innovative food packaging, the book includes Food packaging strategy design and development, Food biodeterioration and methods of preservation, Packaged product quality and shelf life, Logistical packaging for food marketing systems, Packaging materials and processes. The battle rages over which type of container should be used for which application. It is therefore necessary to consider which materials or combination of materials and processes will best serve the market and enhance brand value. Food Packaging Technology gives you the tools to determine which form of packaging will meet your business goals without compromising the safety of your product.

Packaging Materials and Processing for Food, Pharmaceuticals and Cosmetics Frederic Debeaufort, Kata Galic, Mia Kurek, Nasreddine Benbettaieb, Mario Scetar, 2021-03-31. This book provides valuable information on a range of food packaging topics. It serves as a source for students, professionals and packaging engineers who need to know more about the characteristics, applications and consequences of different packaging materials in food packaging interactions. This book is divided into 13 chapters and focuses on the agro-food, cosmetics and pharmaceutical sectors. The first four chapters cover traditional packaging materials: wood, paper and cardboard, glass and metal. The next two deal respectively with plastics and laminates. Biobased materials are then covered, followed by a presentation of active and smart packaging. Some chapters are also dedicated to providing information on caps and closures as well as auxiliary materials. Different food packaging methods are presented, followed by an investigation into the design and labelling of packaging. The book ends with a chapter presenting information on how the choice of packaging material is dependent on the characteristics of the food products to be packaged.
