## Food Question:

*Encyclopedia of Diet: A Treatise on the Food Question (Complete)* Eugene Christian, 2020-09-28

Countless centuries have come and gone and have left on the earth myriad forms of life but just what life is from whence it came whether or not there is purpose or design behind it whether or not all the sacred books are mere conceptions of the infant mind of the whence and whither we do not know but when we put life beneath the searchlight of science we do know that it is a mere assembling of ionic matter into organic forms and that this strange work is done in accordance with certain well defined laws We know that these laws are a part of the great cosmic scheme In harmony with them works evolution which tends to lift to higher and higher degrees of perfection all forms of both animate and inanimate life We believe that if all the natural laws governing life could be ascertained and obeyed the number of disorders or interferences with Nature s scheme would be very greatly decreased Man s system of co operating with his fellow creatures which we call civilization has imposed certain restrictions duties and limitations upon him which make it impossible for him to live in strict accordance with these laws therefore if he would have his birthright which is health he must employ science to fit him into his artificial environment Man has been brought to his present state of physical development on the rural outdoor close to nature plan and since he must live in houses and pursue occupations foreign to those through which he was developed he must make corresponding changes in the material from which his body is constantly being repaired and made therefore as the selections combinations and proportions of the various things he needs for nourishment are determined by his age activity and exposure to the open air if he accurately or even approximately ascertains and observes these things life will continually ascend in the scale of power and grandeur and his endurance and period of longevity will be increased Nearly all forms of life on this globe except man live approximately eight times their period of maturity Man matures at twenty four measured by this scale he should live about two hundred years But the average life of civilized man reckoning from the age of six is only about forty years while if we include the infant class and reckon the average age from his birth he scarcely gets his growth before his hair and teeth are disappearing and his eyesight is being propped up by the lens of the oculist and he quietly drops into his grave One hundred and sixty years of life then is about what civilization has cost him up to date This is very expensive but of course he has something to show for it He has aeroplanes wireless communication the mile a minute train politics several kinds of religion rum and cocain the tramp the billionaire and the bread line We cannot consistently leap over ten thousand years of heredity and habit but we can recover some part of the one hundred and sixty years of life civilization has cost us This can be done by feeding our bodies according to their requirements determined by age temperature of environment and work or activity by cultivating mental tranquillity by loving some one besides ourselves and proving it by breathing an abundance of fresh air and by doing useful work Of all these things food is the most important because it is the raw material that builds the temple wherein all other things dwell Civilization and science are doing but little real good for man if they cannot select for

him the material necessary to develop his body and all its faculties to their highest degree or at least free him from much of his disease and materially increase his ease they have brought him but little I say if they cannot show him a way to live more than forty years Science would have nothing of which to boast if it only pointed out a way by which man could exist for two hundred years as this is his birthright It can only boast when it has given him more than his natural heritage That man's general health and period of longevity have decreased while all other branches of science have so vastly increased is evidence sufficient to justify the assertion that he has not employed scientific methods to the art of living or at least to those fundamental principles such as nutrition motion and oxidation which really govern his health and his life The difference between youth and age between virility and senility is in reality a chemical difference only The difference between the flexible cartilage of youth and the stiff cartilage of age is one of chemistry

The Food Question in the Middle East Malak S. Rouchdy, Iman A. Hamdy, 2017-10-01 In recent years the food question has been a central concern for politicians economists international organizations activists and NGOs alike as well as social scientists at large This interest has emerged from the global food crisis and its impact on the environment and the political economy and security of the global south as well as the expansion of scholarly studies relating food issues to agrarian questions with the objective of developing theoretical frameworks that would allow for a critical analysis of the current food issues at historical cultural social political and economic levels In this context Cairo Papers organized its 2016 symposium around the food question in the Middle East Papers in this collection address the food question from both its food and agricultural aspects and approach it as the site of political and economic conflicts as the means of sociocultural control and distinction and as the expression of national and ethnic identities Contributors Ellis Goldberg Saker ElNour Hala Barakat Khaled Mansour Malak S Rouchdy Habib Ayeb Christian Handerson Sara Pozzi and Sara El Sayed
