Bennett,Sarita A. Morse,2014-08-20 Human footprints provide some of the most emotive and tangible evidence of our ancestors They provide evidence of stature presence behaviour and in the case of early hominin footprints evidence with respect to the evolution of human gait and foot anatomy While human footprint sites are rare in the geological record the number of sites around the World has increased in recent years along with the analytical tools available for their study The aim of this book is to provide a definitive review of these recent developments with specific reference to the increased availability of three dimensional digital elevation models of human tracks at many key sites The book is divided into eight chapters Following an introduction the second chapter reviews modern field methods in human ichnology focusing on the development of new analytical tools The third chapter then reviews the major footprint sites around the World including details on several unpublished examples Chapters then follow on the role of geology in the formation and preservation of tracks on the inferences that can be made from human tracks and the final chapter explores the application of this work to forensic science Audience This volume will be of interest to researchers and students across a wide range of disciplines sedimentology archaeology forensics and palaeoanthropology **Foot-prints of the Creator** Hugh Miller,Louis

Agassiz,1873 **Dinosaur Footprints & Trackways of La Rioja** Félix Pérez-Lorente,2015-07-06 A guide to this fossil rich area of Spain Likely to become a landmark reference in dinosaur ichnology James O Farlow During the Early Cretaceous lakes meandering streams and flood plains covered the region where the current foothills of Rioja now exist Today the area is

known for its wine and for the dozens of sites where footprints and trackways of dinosaurs amphibians and even pterosaurs can be seen The dinosaurs that lived here 120 million years ago left their footsteps imprinted in the mud and moist soil Now fossilized in rock they have turned Rioja into one of the most valuable dinosaur footprint sites in all of Europe Flix Perez Lorente and his colleagues have published extensively on the region mostly in Spanish language journals In this volume Perez Lorente provides an up to date synthesis of that research in English He offers detailed descriptions of the sites footprints and trackways and explains what these prints and tracks can tell us about the animals who made them *Early Permian Footprints and Facies* Spencer G. Lucas, Andrew B. Heckert, 1995

Carbon Footprints as Cultural-Ecological Metaphors Anita Girvan, 2017-10-10 Through an examination of carbon footprint metaphors this book demonstrates the ways in which climate change and other ecological issues are culturally and materially constituted through metaphor The carbon footprint metaphor has achieved a ubiquitous presence in Anglo North American public contexts since the turn of the millennium yet this metaphor remains under examined as a crucial mediator of political responses to the urgent crisis of climate change Existing books and articles on the carbon footprint typically treat this metaphor as a quantifying metric with little attention to the shifting mediations and practices of the carbon footprint as a metaphor This gap echoes a wider gap in understanding metaphors as key figures in mediating more than human relations at a time when such relations profoundly matter As a timely intervention this book addresses this gap by using insights from environmental humanities and political ecology to discuss carbon footprint metaphors in popular and public texts This book will be of great interest to researchers and students of environmental humanities political ecology environmental communication and metaphor studies *In the Foot-prints of the Pioneers of Stephenson County, Illinois*, 1900

World Regional and Cultural Footprints and Environmental Sustainability Ebenezer O. Aka, 2017-04-26 The book examines the issues of sustainability in general It addresses various socioeconomic determinants of ecological footprints in different world s nations regions and cultures Major socioeconomic determinants of ecological footprints are fleshed out using Comparative Model Analysis and rigorous Multiple Regression Analysis The study exposes the inequitable distribution of the world s ecological footprints and also heightens the concern about ecological imbalances and overshoots It explains how sustainable development can be promoted and achieved in regional national and local jurisdictions The study provides information that will likely help various governments and policy makers determine if a given nation region or culture is on a sustainable path It helps government leaders planners policy makers and even students of sustainability make a difference in mitigating the effects of various environmental stressors If this book makes people and policy makers in different countries regions and cultures think globally but act locally then the objectives are well served *Dinosaur Tracks and Other Fossil Footprints of Europe* Martin Lockley, Christian Meyer, 2000-03-07 The long and distinguished tradition of tracking dinosaurs and other extinct animals in Europe dates back to the 1830s Yet this venerable tradition of scientific activity cannot compare in magnitude and scope with the

unprecedented spate of discovery and documentation of the last few years Now following on the heels of his Dinosaur Tracks and Other Fossil Footprints of the Western United States Martin Lockley teams up with Christian Meyer to present an up to date synthesis of the recent findings in the field of European fossil footprints Drawing extensively on their own research results from studies in Britain Switzerland Portugal Spain and elsewhere the authors create a dynamic picture of mammal reptile bird and amphibian track makers throughout more than 300 million years of vertebrate evolution placed in the context of Europe's changing ancient environments Beginning with an introduction to tracking and a history of the European tracking tradition Dinosaur Tracks and Other Fossil Footprints of Europe then charts a broad path of evolutionary proliferation from the proto dinosaurs of the Early Triassic period to the dinosaurs decline and disappearance in the Upper Cretaceous The survey continues into the age of mammals and birds ending with the cave art of our Paleolithic ancestors
