O'Callaghan,1987-02-28 Hypotheses regarding development of dominant follicles during a bovine estrous cycle Inhibin and ovarian function Development of preovulatory follicles in the cow from luteolysis until ovulation Follicular development in heifers chronically treated with bromocryptine

Physiology of the Graafian Follicle and Ovulation R. H. F. Hunter,2003-05 The development and selection of ovarian follicles is one of the most active areas of contemporary reproductive research Relevant experimental work extends from laboratory rodents across a wide range of domestic species to human clinical studies especially as related to problems of fertility and in vitro fertilisation This 2003 volume provides comprehensive coverage of the field integrating research findings from animal and human studies and condensing the vast published literature into a meaningful and digestible physiological account which highlights the key role played by the oocyte in influencing all stages of follicular development

Reproduction in Domestic Animals Perry T. Cupps,1991-02-20 A unique feature of this book is the focus on large domestic animals Previous editions were considered the Bible of reproductive physiology It covers basic large animal reproductive physiology provides species specific information and is suitable as a textbook for upper division courses

Production Diseases in Farm Animals Th Wensing,1999-02-26 High producing farm animals dairy cows beef cattle veal calves pigs sheep etc are permanently challenged by a variety of factors lack of proper nutrition deficit surplus housing systems infections and stress The incidence course and outcome of production diseases are changing continuously Therefore new information on prevention diagnosis and treatment of production diseases is needed These problems are complicated by the discussion of animal welfare the rapid changes in agricultural production and the economics of production This complexity can only be analysed pushed forward or eventually solved by an interdisciplinary approach which can stimulate new ideas for research and collaboration At the 10th International Conference on Production Diseases in Farm Animals 1998 about 120 scientists in the field of large animal science presented the results of their research in connection with this subject The full papers of the key note lectures and the abstracts of the scientific presentations are published in this book The abstracts in this book provide scientists veterinarians and other workers in animal husbandry with the most recent findings of ongoing research Over 20 full papers provide up to date reviews of the developments in the different disciplines in relation to the production diseases in modern husbandry

Reproductive Technologies in Farm Animals, 2nd Edition Ian Gordon,2017-06-23 Building on the successful structure of the first edition the second edition of Reproductive Technologies in Farm Animals has been totally updated and revised to provide an up to date account of the key techniques employed in manipulating reproduction in farm animals including beef and dairy cattle pigs sheep goats buffaloes camelids horses and poultry A classic introductory text to the subject the book is based on a comprehensive review of the current literature This text remains key reading for students in animal science agriculture veterinary medicine and biology and veterinary practitioners and farmers who wish to keep updated on developments in techniques that may be useful in their daily practice **Improving Genetic Disease Resistance in Farm Animals** Akke Jitske Akkermans,W. Sybesma,2012-12-06 This publication contains the proceedings of a seminar held in Brussels on November 8 9 1988 The title of the seminar was Reducing the costs of disease by improving resistance through genetics The seminar was held as an activity of the Community Programme for the Coordination of Agricultural Research 1984 1988 Costs of disease depend on losses caused by morbidity mortality and production decreases and on the costs of preventive measures including vaccination and medication Production losses often contribute a major portion to the total costs To reduce costs of disease preventive measures like vaccination preventive medication and hygienic procedures are applied Genetic resistance is an attractive preventive measure because of its consistent nature in the next generations because it precludes veterinary services and because there are no side effects Constraints are the long term investment relatively slow progress per generation in combination with production traits and the considerable lack of knowledge about inheritance of resistance mechanisms in farm animals Bovine Reproduction Richard M. Hopper,2014-08-18 Bovine Reproduction is a comprehensive current reference providing information on all aspects of reproduction in the bull and cow Offering fundamental knowledge on evaluating and restoring fertility in the bovine patient the book also places information in the context of herd health where appropriate for a truly global view of bovine theriogenology Printed in full color throughout the book includes 83 chapters and more than 550 images making it the most exhaustive reference available on this topic Each section covers anatomy and physiology breeding management and reproductive surgery as well as obstetrics and pregnancy wastage in the cow Bovine Reproduction is a welcome resource for bovine practitioners theriogenologists and

animal scientists as well as veterinary students and residents with an interest in the cow

Reproductive Technologies in Farm Animals Ian Gordon, 2004 In the past half century great progress has been made in the reproductive management of farm animals both mammals and birds This book aims to review developments and indicate which reproductive technologies can be used commercially or in research It begins by discussing artificial insemination and how this has recently been refined in semen sexing technology Embryo transfer in vitro embryo production technology and the control of oestrus and ovulation are then reviewed Subsequent chapters consider the control of postpartum ovarian activity seasonal breeding multiple births and litter size pregnancy testing parturition and the onset of puberty The author then describes more recent developments in cloning and the production of transgenic animals before a final chapter on suppressing reproductive activity

Diagnostic Ultrasound and Animal Reproduction M.A.M. Taverne, A.H. Willemsse, 2013-06-29 The use of ultrasonic imaging techniques for diagnostic purposes in veterinary medicine and animal science has lagged far behind their use in human medicine In the area of domestic animal reproduction diagnostic ultrasonography has a relatively short history Reports on B mode scanning first appeared as late as 1969 when Stouffer and co workers used it for counting foetal numbers in late gestation sheep After Lindahl had re evaluated the potential of two dimensional ultrasonography for pregnancy diagnosis in sheep in 1976 results of the first large scale field trials by Fowler and Wilkins on predicting foetal numbers during the first half of gestation in sheep were published as recently as 1980 In this year also the first paper by Palmer and co workers on ultrasonic scanning of the uterus and ovaries in the mare appeared The improvement of diagnostics which was achieved by the application of this technique is illustrated by its present routine use in clinical equine practice and sheep breeding Besides offering an accurate early pregnancy diagnosis in species such as the horse cow sheep goat pig and dog ultrasonography enables the visualization of ovarian and uterine structures for the identification of both physiological and pathological conditions In this way it replaces or supplements the more common diagnostic techniques used by the general practitioner so far Ultrasonography has also opened several new lines of research for clinicians and research workers

Energy Metabolism in Farm

Animals M.W. Verstegen,A.M. Henken,2012-12-06 Animal production systems have changed dramatically over the last two decades Knowledge of energy metabolism and environmental physiology has increased as appears from many textbooks on these disciplines The contents of the symposia on energy metabolism of farm animals show this and they have initially focussed on feed evaluation and later on comparative aspects of energy metabolism They show part of the progress being made Application of knowledge of energy metabolism for animals has a long history since Lavoisier In addition to this studies about the environmental requirements of animals have shown that we are still far from accurate assessment of these requirements in terms of nutrients and energy In model studies on energy metabolism researchers have recognized the interaction between the environment and the energy requirements of animals Estimation of energy requirements has been done in physiological physical and behavioural studies The impact of conditions as encountered by animals in various production systems has been approached from different viewpoints related to these different disciplines In addition various kinds of infections bacterial parasitic subclinical clinical have been evaluated only recently with regard to their effect on protein and or energy metabolism and thus on production People working in the field of feed evaluation have defined how chemical and physical properties of nutrition influence energy to be derived for maintenance and production **Reproduction**

Approach P.R. Wiepkema,P.W.M. van Adrichem,2012-12-06 This book contains the contributions to a workshop on stress in farm animals held on April 17 18 1986 at the Pietersberg Conference Centre Oosterbeek The workshop was financed by the Commission of the European Communities from its budget for the coordination of Community Agricultural Research and the Agricultural University of Wageningen The Netherlands Its aim was to bring together experts from different disciplines all having in common that in one way or another they were involved in stress research Such a multidisciplinary encounter should not only provide an interesting description of present day knowledge on stress but also promote a more integrated view on stress phenomena as they occur in higher vertebrates In the course of this workshop the following fields of research were related to stress endocrinology immunology pathology neurobiology ethology and theoretical biology Each of these relationships was introduced by one speaker presenting a concise state of the art The same relationship was elaborated by a second speaker implementing the available knowledge as far as possible to the farm animal situation Therefore in this book each discipline is represented by a duo and introduced by some integrating remarks Controlled Breeding in Farm
