Introduction to Holomorphic Functions of Several Variables, Volume II R.C. Gunning, 2018-05-02 Introduction to Holomorphic Functions of Several Variables Volumes 1 111 provide an extensive introduction to the Oka Cartan theory of holomorphic functions of several variables and holomorphic varieties Each volume covers a different aspect and can be read independently **Singularities, Part 2** Peter Orlik, American Mathematical Society, 1983 On April 7 10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana This work presents the written versions of all but three of the invited talks presented at this Symposium It contains 2 papers by invited speakers who are not able to attend *Introduction to Holomorphic Functions of Several Variables, Volume I* R.C. Gunning, 2018-05-02 Introduction to Holomorphic Functions of Several Variables Volumes 1 111 provide an extensive introduction to the Oka Cartan theory of holomorphic functions of several variables and holomorphic varieties Each volume covers a different aspect and can be read independently *Proceedings of Symposia in Pure Mathematics*, 1984 Each volume in this series includes papers many of a survey expository nature on a specific active area of mathematics These papers were presented at symposia summer research institutes and summer research conferences sponsored by the American Mathematical Society and other organizations *Quasiconformal Mappings in the Plane and Complex Dynamics* Luis T. Magalhães, 2025-06-10 This book comprehensively explores the foundations of quasiconformal mappings in the complex plane especially in view of applications to complex dynamics Besides playing a crucial role in dynamical systems these mappings have important applications in complex analysis geometry topology potential theory and partial differential equations functional analysis and calculus of variations electrostatics and nonlinear elasticity The work covers standard material suitable for a one year graduate level course and extends to more advanced topics in an accessible way even for students in an initial phase of university studies who have learned the basics of complex analysis at the usual level of a rigorous first one semester course on the subject At the frontier of complex analysis with real analysis quasiconformal mappings appeared in 1859 60 in the cartography work of A Tissot well before the term quasiconformal was coined by L Ahlfors in 1935 The detailed study of these mappings began in 1928 by H Grötzsch and L Ahlfors seminal work published in 1935 significantly contributed to their development and was considered for awarding him the Fields Medal in 1936 The theory further evolved in 1937 and 1939 with O Teichmüller's contributions and subsequent advancements are partially covered in this book Organized into ten chapters with eight appendices this work aims to provide an accessible self contained approach to the subject and includes examples at various levels and extensive applications to holomorphic dynamics Throughout the text historical notes contextualize advancements over time A sequel to the author's previous book *Complex Analysis and Dynamics in One Variable with Applications* also published by Springer this volume might be suitable for students in mathematics physics or engineering A solid background in basic mathematical analysis is

recommended to fully benefit from its content **The Cremona Group and Its Subgroups** Julie Déserti, 2021-04-13 The goal of this book is to present a portrait of the n -dimensional Cremona group with an emphasis on the 2-dimensional case. After recalling some crucial tools, the book describes a naturally defined infinite-dimensional hyperbolic space on which the Cremona group acts. This space plays a fundamental role in the study of Cremona groups as it allows one to apply tools from geometric group theory to explore properties of the subgroups of the Cremona group as well as the degree growth and dynamical behavior of birational transformations. The book describes natural topologies on the Cremona group, codifies the notion of algebraic subgroups of the Cremona groups and finishes with a chapter on the dynamics of their actions. This book is aimed at graduate students and researchers in algebraic geometry who are interested in birational geometry and its interactions with geometric group theory and dynamical systems *Number Theory* Kağan Kurşungöz, Ayberk Zeytin, 2021-11-08 Three major branches of number theory are included in the volume: namely, analytic number theory, algebraic number theory, and transcendental number theory. Original research is presented that discusses modern techniques and survey papers from selected academic scholars **Complex Analytic Cycles I** Daniel Barlet, Jón Magnússon, 2020-01-03 The book consists of a presentation from scratch of cycle space methodology in complex geometry. Applications in various contexts are given. A significant portion of the book is devoted to material which is important in the general area of complex analysis. In this regard, a geometric approach is used to obtain fundamental results such as the local parameterization theorem, Lelong's Theorem, and Remmert's direct image theorem. Methods involving cycle spaces have been used in complex geometry for some forty years. The purpose of the book is to systematically explain these methods in a way which is accessible to graduate students in mathematics as well as to research mathematicians. After the background material which is presented in the initial chapters, families of cycles are treated in the last, most important part of the book. Their topological aspects are developed in a systematic way, and some basic important applications of analytic families of cycles are given. The construction of the cycle space as a complex space, along with numerous important applications, is given in the second volume. The present book is a translation of the French version that was published in 2014 by the French Mathematical Society **Fonctions de Plusieurs Variables Complexes** François Norguet, 2006-11-15 **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1976 **Lectures on K3 Surfaces** Daniel Huybrechts, 2016-09-26 K3 surfaces are central objects in modern algebraic geometry. This book examines this important class of Calabi-Yau manifolds from various perspectives in eighteen self-contained chapters. It starts with the basics and guides the reader to recent breakthroughs such as the proof of the Tate conjecture for K3 surfaces and structural results on Chow groups. Powerful general techniques are introduced to study the many facets of K3 surfaces, including arithmetic, homological, and differential-geometric aspects. In this context, the book covers Hodge structures, moduli spaces, periods, derived categories, birational techniques, Chow rings, and deformation theory. Famous open conjectures, for example, the

conjectures of Calabi Weil and Artin Tate are discussed in general and for K3 surfaces in particular and each chapter ends with questions and open problems Based on lectures at the advanced graduate level this book is suitable for courses and as a reference for researchers **An Introduction to Complex Analysis in Several Variables** Lars Hörmander,1966

Harmonic Analysis on Symmetric Spaces and Applications I

Audrey Terras,2012-12-06 Since its beginnings with Fourier and as far back as the Babylonian astronomers harmonic analysis has been developed with the goal of unraveling the mysteries of the physical world of quasars brain tumors and so forth as well as the mysteries of the nonphysical but no less concrete world of prime numbers diophantine equations and zeta functions Quoting Courant and Hilbert in the preface to the first German edition of Methods of Mathematical Physics Recent trends and fashions have however weakened the connection between mathematics and physics Such trends are still in evidence harmful though they may be My main motivation in writing these notes has been a desire to counteract this tendency towards specialization and describe applications of harmonic analysis in such diverse areas as number theory which happens to be my specialty statistics medicine geophysics and quantum physics I remember being quite surprised to learn that the subject is useful My graduate education was that of the 1960s The standard mathematics graduate course proceeded from Definition 1 1 1 to Corollary 14 5 59 with no room in between for applications motivation history or references to related work My aim has been to write a set of notes for a very different sort of course
