Unnevehr, Laurian,Ronchi, Loraine, To better inform donor support for public food safety interventions this paper reviews the literature on the impact of more stringent food safety standards on developing country markets This literature has primarily focused on the market access and economic implications of higher standards in export markets rather than on the extensive debate around market failure and public health benefits that dominates the literature in developed countries We find that the market access benefits from compliance with public and private food safety standards are clear as is the market exclusion that results from noncompliance These benefits are now well documented with more recent evidence pointing to added benefits of poverty reduction and spillovers for health and productivity Rigorous evidence is also found concerning the positive role of technical assistance and public or donor support Most of the literature however has focused on the relatively small market for EU horticultural products which will provide opportunities for only a fraction of developing country

producers This narrow focus causes important gaps in the literature informing meaningful public roles in addressing food safety in developing countries Future research should examine and rigorously evaluate alternative models for how best to support improved food safety management outside of the export channels that have been the focus of the literature thus far Further evaluating the impact of public private approaches on reduction in enforcement costs and improving compliance through supporting industry led efforts would better inform donor support for food safety reforms as would research among developing country consumers with respect to food safety reforms and public health
