## **Food Supply And Economic Development:**

**Food Supply and Economic Development** Galal A. Amin, 2013-11-26 First Published in 1966 The purpose of this book for two fold First to investigate the role played by food supply in economic development and secondly to examine the food problem in the United Arab Republic Egypt      **Population, Food Supply and Economic Development** Max F.

Millikan, 1971      Economics of Agricultural Development George W. Norton, Jeffrey Alwang, William A. Masters, 2014-09-25 Economics of Agricultural Development examines the causes severity and effects of poverty population growth and malnutrition in developing countries It discusses potential solutions to these problems progress made in many countries in recent years and the implications of globalization for agriculture poverty and the environment Topics covered in the book include Means for utilizing agricultural surpluses to further overall economic development The sustainability of the natural resource environment Gender issues in relation to agriculture and resource use The contribution of agricultural technologies The importance of agricultural and macroeconomic policies as related to development and trade and the successes and failures of such policies Actions to encourage more rapid agricultural and economic development The globalization of trade in goods services and capital has been fundamental to changes being experienced in the agricultural and rural sectors of developing countries It has major implications for the fight against poverty and food insecurity and for environmental sustainability Recently agriculture has returned to a position of center stage in the development dialog as food price volatility has increased along with water scarcity and concerns grow over the effects of climate change on food supply and food security This new edition of the essential textbook in the field builds on the 2010 edition and reflects the following developments Growth in foreign demand for land and other natural resources Significant progress in agricultural and economic development in some low income countries while others are being left behind Continued growth in demand for higher valued farm products This book is essential reading for undergraduate students seeking to understand the economics of agricultural development and the world food system including environmental and human consequences international trade and capital flows      *Food Supply and Economic Development in Indonesia, Problems and Prospects* Saleh Afiff, 1968 The general purpose of this study is to evaluate the role of agriculture in Indonesia in supplying food to the country s economy Analysis of the general inter relationship between the agricultural and non agricultural sectors of a developing densely populated economy and the sectorial interdependence viewed in relation to the supply and demand for food during the development process provides a general framework of reference for the analysis of the food problems in Indonesia The data originate from two basic sources 1 Primary data from the various institutions involved in and responsible for the food economy in Indonesia Much of these data were collected in Indonesia and in part they were an outgrowth of the writer s work there 2 Secondary data from published sources Use of the food balance sheet shows that the common pattern of the Indonesian diet is characterized by a high starchy staple ratio and staples rice is the most important Through a comparison of

these results with the nutritional standards calculated on the basis of methods suggested by the Food and Agriculture Organization of the United Nations the nutritional status of the Indonesian people is evaluated By both qualitative and quantitative standards the average diet of the Indonesian people is poor Demand for food in Indonesia will increase significantly in the near future primarily due to the population and income effect From use of Okhawa s demand equation major shifts are expected toward the consumption of more rice and more protective foods Any rise in per capita income will bring strong pressure to increase the proportion of starches that are supplied by rice To meet this growing demand the need is to increase domestic production rather than commercial imports Trends in the production of the six major farm food crops have been constructed and analyzed for the period of 1950 1965 With the exception of groundnuts per capita production of these crops kept up with population growth However for the main food item rice the rate of increase of per capita production was lower than that of the per capita consumption This gap resulted in the importation of huge amounts of rice Analysis of the conditions of food production leads to the conclusion that three factors are mainly responsible for the production gap First the prevalence of disguised unemployment in the food industry second the lack of adequate credit facilities and capital in the rural areas third the lack of an efficient marketing organization Because of the inadequacies in these three important aspects of the institutional framework the process of adapting new technologies and inputs to the production of food is slow Speed is crucial In view of the population problem the longer the present trends are permitted to continue the more difficult it will be to close the production gap Analysis of these three factors leads to the following conclusions 1 Industrialization is a necessary condition for expanding food production and over all economic development in order to absorb the surplus agricultural labor force 2 Marketing reform is needed to improve the institutional framework in the producing areas in order to maximize the rate of growth of food production This reform includes providing adequate and efficient credit facilities promoting competition in the food market at the local level and improving the infrastructure

Local Food Systems and Community Economic Development R. David Lamie, Steven C. Deller, 2020-05-21 Local Food Systems and Community Economic Development provides scholarly and practical knowledge on a range of issues often associated with local food system development Many people agree that there are unintended consequences associated with the manner in which our food supply chain has evolved These concerns range in focus from health to environment to economic structure to social justice But for each argument critical of our current food system there are to be found strong counter arguments the popular press is replete with stories that lean toward taking specific sides in these arguments often demonizing those on the other side In this volume local food scholars strive to be fair balanced and as factual as possible in their arguments This even handed approach is appropriate as it should foster more sustainable community change and should lead us toward a stronger foundation for scholarly inquiry and ultimately more respect and credibility for efforts to better understand the phenomenon of local and regional food system development Amidst a deepening interest in local food systems as a community economic

development strategy Local Food Systems and Community Economic Development will be of great interest to scholars of community development rural studies agriculture food systems and rural economy The chapters originally published as a special issue of Community Development

**How Does Economic Development Influence Food Supply?** Rafael Fritschi, Martijn Sonneveld, Pascal Goeke, Christian Berndt, 2013 *Weather and Our Food Supply* Iowa State University (Ames, Estados Unidos). Center for Agricultural and Economic Development, 1964

Economic Development and the Environmental Ecosystem Hasan Dincer, Serhat Yüksel, 2023-04-17 This volume illustrates the relationship between environmental factors and economic development of countries from various angles Global warming has become a problem that threatens the whole world especially in recent years It is known that the main reason for this is carbon emissions On the other hand carbon emissions generally consist of fossil fuel based energy consumption This situation creates very serious environmental problems Because of this problem the concept of carbon zero has become very popular especially in recent years Many countries take some actions to minimize carbon emissions Especially in the coming years carbon emissions will become a competitive factor for countries and businesses In this respect countries with low carbon emissions will be preferred more in foreign trade In addition businesses that do not generate carbon emissions in the production process will also gain a significant competitive advantage in international trade The contributions take a multidimensional outlook to energy investments and offer solutions for decision making for energy projects in risky business ecosystems
