**The Politics of Fat** Laura S. Sims,2016-09-16 Politics pervades every link in the food chain from the farm to the fork It influences what foods we eat how much they cost what we know about them and how safe they are This book brings the point home by focusing on the vexing issue of dietary fat content known to be a health menace but also an ingredient in many or most of our best loved foods Through this prism Dr Sims explores the politics of food assistance programmes with a case study of the National School Lunch programme agricultural policy for example the price premium paid to farmers for milk with high butterfat content food content with case studies of food labelling and the approval process for fat substitutes and dietary change with a case study of nutrition education programmes The book concludes with consideration of the costs and benefits of government intervention and nonintervention in food policy from the supply side to the demand side and its consequences for human health and happiness The Politics of Fat shows how government policy affects not only breakfast lunch and dinner but also our between meal snacks explores the nexus of health policy and agricultural policy from price supports to trade policy and is written in an accessible style enlivened by discussion provoking case studies      *Handbook of Polymer Applications in Medicine and Medical Devices* Vinny R. Sastri,2013-12-05 Over the past 2000 years many devices have been developed and used in the mitigation and diagnosis of diseases The materials used in these devices have ranged from stone wood metal ceramics and most recently plastics Medical devices have also evolved in sophistication and complexity over time With the formalization of the scientific method in the seventeenth century such devices became more prevalent 1 Many medical devices were manufactured by doctors or small companies and sold directly to the public with no government standards or oversight With the explosion of medical technology in the early twentieth century several intermediaries had evolved between the medical device industry and the public In 1879 Dr E R Squibb in an address to the Medical Society of the State of New York proposed the enactment of a national statute to regulate food and drugs 2 It was not until 27 years later that the Food and Drug Act of 1906 was introduced into the Congress and signed into law by President Theodore Roosevelt 3 At that time devices that were harmful to human safety and health proliferated the market but regulation of medical devices by the Bureau of Chemistry the precursor to the Food and Drug Administration FDA was limited to challenging commercial products only after they had been released into the market Devices in the marketplace that were defective adulterated or misbranded were seized and the device manufacturers were prosecuted in a court of law but only after the products were sold in the market and caused harm to the end users Thus there was a strong need for regulating the devices before they entered the marketplace An FDA report 4 issued in September 1970 detailed as many as 10 000 injuries and 731 deaths from ineffective medical devices The report recommended the formation of a regulatory system and body that would enforce the production and sale of safe and effective devices to the public All medical devices

already on the market would be inventoried and classified into a three tiered system based on their criticality of end use It also detailed requirements for records and reports registration and inspection of establishments and uniform quality assurance programs called good manufacturing practices GMP After much lobbying by the FDA Senate bill SR 510 The Medical Device Amendments of 1973 was introduced by Senator Edward M Kennedy and was passed by the Senate in 1975 House bill HR 11124 introduced by Representative Paul Rogers was passed by the House in 1976 These bills eventually became the Medical Device Amendments of 1976 and were signed into law by President Nixon The Medical Device Amendments of 1976 became the basis for the medical device regulation in the United States to control and regulate the production of finished devices and thus the device manufacturers themselves Democracy by Disclosure Mary Graham,2002-08-26 In December 1999 the Institute of Medicine shocked the nation by reporting that as many as 98 000 Americans died each year from mistakes in hospitals twice the number killed in auto accidents Instead of strict rules and harsh penalties to reduce those risks the Institute called for a system of standardized disclosure of medical errors If it worked it would create economic and political pressures for hospitals to improve their practices Since the mid 1980s Congress and state legislatures have approved scores of new disclosure laws to fight racial discrimination reduce corruption and improve services The most ambitious systems aim to reduce risks in everyday life risks from toxic pollution contaminants in drinking water nutrients in packaged foods lead paint workplace hazards and SUV rollovers Unlike traditional government warnings they require corporations and other organizations to produce standardized factual information at regular intervals about risks they create Legislated transparency has become a mainstream instrument of social policy Mary Graham argues that these requirements represent a remarkable policy innovation Enhanced by computers and the Internet they are creating a new techno populism an optimistic conviction that information itself can improve the lives of ordinary citizens and encourage hospitals manufacturers food processors banks airlines and other organizations to further public priorities Drawing on detailed profiles of disclosure systems for toxic releases nutritional labeling and medical errors Graham explains why the move toward greater transparency has flourished during a time of regulatory retrenchment and why corporations have often supported these massive raids on proprietary information However Democracy by Disclosure sounds a cautionary note Just as systems of financial disclosure have come under new scrutiny in the wake of Enron s collapse systems of social disclosure deserve car **From Label to Table** Xaq Frohlich,2023-11-07 How did the Nutrition Facts label come to appear on millions of everyday American household products As Xaq Frohlich unearths this legal scientific and seemingly innocuous strip of information is in fact a prism through which to view the high stakes political battles and development of scientific ideas that shaped the realms of American health nutrition and public communication From Label to Table tells the biography of the food label By tracing policy debates at the U S Food and Drug Administration FDA Frohlich describes the emergence of our present information age in food and diet markets and how powerful government offices inform the public about what they

consume From the early years of FDA food standards with concerns about consumer protection up to present day efforts to modernize the Nutrition Facts panel Frohlich explores the evolving popular ideas about food diet and responsibility for health that inform what goes on the label and who gets to decide that
