Ecorestoration for Sustainability Arnab Banerjee, Manoj Kumar Jhariya, Surendra Singh Bargali, Debnath Palit, 2023-07-19 A transdisciplinary approach to investigating relationships between biomass burning and human health outcomes Environmental degradation is causing severe impacts on the various Earth ecosystems Unsustainable development and anthropogenic pressure have altered the natural balance From this perspective sustainability has become a major issue to frame a greener and cleaner Earth for future generations It can be argued that the worst example of unsustainable development is habitat degradation Therefore ecorestoration and other ecological practices are becoming increasingly important in our march toward sustainability The present book covers all the aspects of ecorestoration and sustainability and how various areas intersect in this space Environmental degradation is increasing all over the world at an unprecedented rate This includes air water soil and other natural resources resulting in the depletion of natural resources and an unsustainable planet Therefore it is incredibly important to restore the ecosystem s health and services to maintain homeostasis In this context ecorestoration approaches in the form of eco friendly technologies need to be formulated to promote the protection and conservation of various ecosystems These approaches include freshwater bodies soil and mined out wasteland degraded forest biodiversity and other degraded ecosystems This important new volume from Wiley Scrivener tackles these problems from a practical perspective offering solutions and new methods for restoring our suffering global ecosystem Edited by a team of experts this collaboration of papers on these issues is a further step in our march toward sustainability Whether for the engineer scientist or student it is a must have for any library

Residuals in Boreal Forests Ajith Perera,Lisa Buse,2014-07-21 Large and intense wildfires are integral to the globally important boreal forest biome While much is known about boreal wildfires the focus on forest remnants that either escape or survive these intense fires is a recent phenomenon academics now study ecological processes of wildfire residuals forest policymakers use their patterns to design harvest strategies forest managers consider their economic value and conservationists recognize their intrinsic ecological importance Ecology of Wildfire Residuals in Boreal Forests is the first book to explore ecological patterns and processes of what does not burn within boreal wildfires Following a brief introduction to the boreal forest biome it discusses the processes that form wildfire residuals how they are studied with various approaches and methods the types extent and ecological functions of wildfire residuals and their role in forest management applications all in the context of ecological scale This book is a reference for researchers and graduate students studying boreal forest ecology as well as for policymakers and forest managers It adopts a non reductionist perspective that will be of interest to scientists from conservation science forest ecology forest management and timber production Brings together fire behaviour ecological scale vegetation ecology and conservation biology to provide a cross disciplinary multi scale and an integrative discussion of forest fire residuals Captures the state of knowledge with a meta analysis of research trends during the past few decades with a comprehensive review of the literature a compilation of key references and a list of key topics relevant to the study of boreal wildfire residuals Identifies the major gaps and uncertainties in the present body of knowledge including a critique of study techniques and reporting practices to date and proposes a set of terms and definitions and a list of research questions and priorities Includes the authors observations and research experience from boreal Canada and information extracted from interactions with North American and European ecologists forest managers and conservationists *Advances in Forest Inventory for Sustainable Forest Management and Biodiversity Monitoring* Piermaria Corona,Michael Köhl,Marco Marchetti,2013-04-17 Forests represent a remnant wilderness of high recreational value in the densely populated industrial societies a threatened natural resource in some regions of the world and a renewable reservoir of essential raw materials for the wood processing industry In June 1992 the United Nations Conference on the Environment and Development UNCED in Rio de Janeiro initiated a world wide process of negotiation with the aim of ensuring sustainable management conservation and development of forest resources Although there seems to be unanimous support for sustainable development from all quarters there is no generally accepted set of indicators which allows comparisons to be made between a given situation and a desirable one In a recent summary paper prepared by the FAO

Forestry and Planning Division Ljungman et al 1999 find that forest resources continue to diminish while being called upon to produce a greater range of goods and services and that calls for sustainable forest management will simply go unheeded if the legal policy and administrative environment do not effectively control undesirable practices Does the concept of sustainable forest management represent not much more than a magic formula for achieving consensus a vague idea which makes it difficult to match action to rhetoric The concept of sustainable forest management is likely to remain an imprecise one but we can contribute to avoiding management practices that are clearly unsustainable **Forest and Stream** ,1890
