Fatal Tradeoffs Public And Private Responsibilities For Risk:

Fatal Tradeoffs W. Kip Viscusi, 1992 Examining issues related to the social regulation of risk this volume contains essays on the value of life empirical estimates of the value of life the rationality of individual responses to risk the effect of government risk regulation efforts and the role of the courts and insurance **Fatal Tradeoffs** W. Kip Viscusi, 1992 Ideally it would be desirable if we could all adopt a high minded commitment to a risk free existence Unfortunately such an objective is beyond our reach politicians who advocate higher taxes rarely get elected and economists who indicate that our resources are limited are often portrayed as purveyors of pessimism **Fatal Tradeoffs** is the culmination and synthesis of the research of a leading authority on the value of life and risk regulation This volume comprises Viscusi's work in the social regulation of risk covering topics relating to the value and empirical estimates of life the rationality of individual responses to risk and the role of government policy In addition to a careful synthesis of selections from his writings **Fatal Tradeoffs** includes a new survey of the value of life literature and a discussion of the rights of the unborn balanced against the employment rights of the mother Viscusi examines the first estimates of the value of life that take into account risks other than fatalities as well as subjective worker perceptions of job risks The book also includes a review of the 1980s regulatory reforms and guidelines for risk policy Balanced with case studies the more technical articles have been opened up to include policy ramifications making the text accessible to professionals and academics alike **Risk Regulation at Risk** Sidney Shapiro, Robert

Glicksman, 2002-09-25 In the 1960s and 1970s Congress enacted a vast body of legislation to protect the environment and individual health and safety Collectively this legislation is known as risk regulation because it addresses the risk of harm that technology creates for individuals and the environment In the last two decades this legislation has come under increasing attack by critics who employ utilitarian philosophy and cost benefit analysis The defenders of this body of risk regulation by contrast have lacked a similar unifying theory In this book the authors propose that the American tradition of philosophical pragmatism fills this vacuum They argue that pragmatism offers a better method for conceiving of and implementing risk regulation than the economic paradigm favored by its critics While pragmatism offers a methodology in support of risk regulation as it was originally conceived it also offers a perspective from which this legislation can be held up to critical appraisal The authors employ pragmatism to support risk regulation but pragmatism also leads them to agree with some of the criticisms against it and even to level new criticisms of their own In the end the authors reject the picture painted by risk regulation's critics of widely excessive and irrational regulation but the pragmatic perspective also leads them to propose a number of recommendations for useful reforms to risk regulation **Law and the Contradictions of the Disability Rights Movement** Samuel R. Bagenstos, 2009-06-23 The passage of the Americans with Disabilities Act in 1990 was hailed as revolutionary legislation but in the ensuing years restrictive Supreme Court decisions have prompted accusations that the Court has betrayed the disability rights movement The ADA can lay claim to notable successes yet people with disabilities

continue to be unemployed at extremely high rates In this timely book Samuel R Bagenstos examines the history of the movement and discusses the various often conflicting projects of diverse participants He argues that while the courts deserve some criticism some may also be fairly aimed at the choices made by prominent disability rights activists as they crafted and argued for the ADA The author concludes with an assessment of the limits of antidiscrimination law in integrating and empowering people with disabilities and he suggests new policy directions to make these goals a reality **The Benefits**

and Costs of the Clean Air Act, 1990 to 2010, 1999 *The Tools of Government* Odus V. Elliott, 2002-02-22 The new tools of public action have come to rely heavily on third parties private businesses nonprofit organisations and other levels of government for their operation The Tools of Government is a comprehensive guide to the operation of these tools and to the management accountability policy and theoretical issues they pose **Of Risks and Normative Responses** Christina Anikó

Simmig, 2023-09-23 Disaster losses in the context of natural hazards continue to rise despite a growing understanding of disaster risks and measures to reduce them One obstacle to enhancing private and public disaster risk reduction is the influence of the distorted risk perception of laypeople The book argues for the necessity of public regulations and explores means to mitigate the consequences of such distorted risk perception through legal measures and adjustments to political decision making in Council of Europe member states while respecting the value of autonomy and democratic principles In terms of collective decision making the book advocates for the implementation of deliberative fora in the democratic decision making process to mitigate the influence of distorted risk perception associated with natural hazards Additionally the book discusses a range of disaster risk reducing measures that member states may lawfully implement to protect individuals and communities from the consequences of distorted risk perceptions related to common natural hazards To underscore the merits of strengthening disaster risk reduction from the bottom up this book demonstrates how fundamental rights and democratic values impede attempts to increase DRR from the top down even in cases where people s risk perceptions are distorted In doing so the book addresses the issue of disaster risk reduction in a novel way by exposing how legal and political barriers to disaster loss reduction can be overcome by giving higher priority to mitigating distorted risk perceptions

Subcommittee on Energy and Environment, 1999 **Sharing Transboundary Resources** Eyal Benvenisti, 2002-04-04 Why do states often fail to cooperate using transboundary natural resources inefficiently and unsustainably This book first published in 2002 examines the contemporary international norms and policy recommendations that could provide incentives for states to cooperate Its approach is multi disciplinary proposing transnational institutions for the management of transboundary resources Benvenisti takes a fresh approach to the problem considering mismanagement as the link between domestic and international processes As well he explores reasons why some collective efforts to develop the international law

on transnational ecosystems have failed while others succeeded This inquiry suggests that adjudicators need to be assertive in progressively developing the law while relying on scientific knowledge more than on past practice Global water policy issues seem set to remain a cause for concern for the foreseeable future this study provides a new approach to the problem of freshwater and will interest international environmentalists and lawyers and international relations scholars and practitioners

Eco-pragmatism Daniel A. Farber,1999-05 Eco pragmatism takes on the most critical controversies in environmental law today how to weigh economic costs against environmental quality and human life how to assess the long time horizons of environmental problems and how to make appropriate decisions in the face of scientific uncertainty about the scope of environmental problems A comprehensive well argued effort to address many of the most difficult issues facing legislators concerned with environmental issues Stephen P Adamian Boston Book Review A timely and well argued contribution Calestous Juma Nature *Regulating Chemical Accumulation in the Environment* Timothy M. Swanson,Marco Vighi,1998-12-10 The environment has become exposed to a range of damaging contaminants from a wide variety of sources Regulation of and legislation against offending parties has frequently been hampered because of the difficulty of co operation between disparate disciplines in the natural social and political sciences This volume forms the conclusion of five years collaboration between toxicologists economists and lawyers in the understanding and solution of the problem of accumulative chemicals As well as a case study of the accumulation of pesticides in groundwater in one particular region the European Union the book forms a general study of the value of interdisciplinary approaches in environmental policy making The volume will be a valuable resource for a broad group of academics and researchers in the area of environmental science and environmental policy It will also form a useful supplementary reference text for courses in environmental policy science economics and toxicology Smoking Paul Slovic,2001-05-23 This book presents a counter view based on a survey of several thousand young persons and adults probing attitudes beliefs feelings and perceptions of risk associated with smoking The authors agree that young smokers give little or no thought to health risks or the problems of addiction The survey data contradicts the model of informed rational choice and underscores the need for aggressive policies to counter tobacco firms marketing and promotional efforts and to restrict youth access to tobacco
