Drug War Politics Eva Bertram, Morris Blachman, Kenneth Sharpe, Peter Andreas, 1996-07-15 Why have our drug wars failed and how might we turn things around Ask the authors of this hardhitting exposé of U.S. efforts to fight drug trafficking and abuse In a bold analysis of a century's worth of policy failure *Drug War Politics* turns on its head many familiar bromides about drug politics It demonstrates how instead of learning from our failures we duplicate and reinforce them in the same flawed policies The authors examine the politics of denial that has led to this catastrophic predicament and propose a basis for a realistic and desperately needed solution Domestic and foreign drug wars have consistently fallen short because they are based on a flawed model of force and punishment the authors show The failure of these misguided solutions has led to harsher get tough policies debilitating cycles of more force and punishment and a drug problem that continues to escalate On the foreign policy front billions of dollars have been wasted corruption has mushroomed and human rights undermined in Latin America and across the globe Yet cheap drugs still flow abundantly across our borders At home more money than ever is spent on law enforcement and an unprecedented number of people disproportionately minorities are incarcerated But drug abuse and addiction persist The authors outline the political struggles that help create and sustain the current punitive approach They probe the workings of Washington politics demonstrating how presidential and congressional out-toughing tactics create a logic of escalation while the criticisms and alternatives of reformers are sidelined or silenced Critical of both the punitive model and the legalization approach *Drug War Politics* calls for a bold new public health approach one that frames the drug problem as a public health not a criminal concern The authors argue that only by situating drug issues in the context of our fundamental institutions the family neighborhoods and schools can we hope to provide viable treatment prevention and law enforcement In its comprehensive investigation of our long futile battle with drugs and its original argument for fundamental change this book is essential for every concerned citizen

program of applied psychophysiology It begins immediately with cardinal rules for establishing credibility when you are preparing a clinical presentation or attending to a clinical presentation The rest of the book details how to address those rules An introduction orients the reader to the purpose needed statistical software definitions of applied psychophysiology the rationale of the discipline and a discussion of the scientific method The content is then presented in five sections covering A The need to know what you are doing from inspiration through protocol development research ethics and protocol approval process B Basic study structures such as research designs appropriate for office or clinical environments C Establishing credibility of data and psychophysiological publications D Statistics for evaluating and interpreting psychophysiological data and E Synthesizing these elements so that write ups and presentations use appropriate research designs and statistics provide an adequate basis to secure any needed grants and provide credible evidence to the professional community Additional sections F through J provide helps in the form of a glossary sample protocols that exemplify good and bad models recommendations for further readings and references This book would work well for graduate students in applied psychophysiology as it takes one through a carefully laid out series of steps from the beginning of inspiration through completed investigation and publication It is an important resource for anyone reading or producing applied psychophysiology research because most training in research methods do not clearly address applied research
