each other's place in the computing industry and expanded the range of creations for which American intellectual property law provides protection. Powerful market forces, aggressive litigation strategies, and new cultures of computing usage and development transformed software into one of the most controversial technologies ever to encounter the American patent system.

Punched-Card Systems and the Early Information Explosion, 1880-1945 Lars Heide, 2009-04-27 At a time when Internet use is closely tracked and social networking sites supply data for targeted advertising, Lars Heide presents the first academic study of the invention that fueled today's information revolution: the punched card. Early punched cards helped to process the United States census in 1890. They soon proved useful in calculating invoices and issuing pay slips. As demand for more sophisticated systems and reading machines increased in both the United States and Europe, punched cards served ever larger data processing purposes. Insurance companies, public utilities, businesses, and governments all used them to keep detailed records of their customers, competitors, employees, citizens, and enemies. The United States used punched card registers in the late 1930s to pay roughly 21 million Americans their Social Security pensions. Vichy France used similar technologies in an attempt to mobilize an army against the occupying German forces, and the Germans in 1941 developed several punched card registers to make the war effort and surveillance of minorities more effective. Heide's analysis of these three major punched card systems, as well as the impact of the invention on Great Britain, illustrates how different cultures collected personal and financial data and how they adapted to new technologies. This comparative study will interest students and scholars from a wide range of disciplines, including the history of technology, computer science, business history, and management and organizational studies.

The Secret War Between Downloading and Uploading Peter Lunenfeld, 2011 As we hurtle into the twenty-first century, will we be passive downloaders of content or active uploaders of meaning? The computer writes. Peter Lunenfeld is the twenty-first century's culture machine. It is a dream device serving as the mode of production, the means of distribution, and the site of reception. We haven't quite achieved the flying cars and robot butlers of futurist fantasies, but we do have a machine that can function as a typewriter and a printing press, a paintbrush and a gallery, a piano and a radio, the mail as well as the mail carrier. But warns Lunenfeld, we should temper our celebration with caution: we are engaged in a secret war between downloading and uploading, between passive consumption and active creation, and the outcome will shape our collective futures. In *The Secret War Between Downloading and Uploading*, Lunenfeld makes his case for using digital technologies to shift us from a consumption to a production model. He describes television as the high-fructose corn syrup of the imagination and worries that it can cause cultural diabetes; prescribes mindful downloading, meaningful uploading, and info triage as cures; and offers tips for crafting bespoke futures in what he terms the era of Web 2.0: interconnectivity to the nth power. He also offers a stand-alone genealogy of digital visionaries, distilling a history of the culture machine that runs from the Patriarchs, Vannevar Bush's WWII generation, to the Hustlers, Bill Gates and Steve Jobs, to the Searchers, Larry Page and Sergey Brin of Google fame. After half a century of television-conditioned consumption,

downloading Lunenfeld tells us we now find ourselves with a vast new infrastructure for uploading We simply need to find the will to make the best of it

Predicting the Winner Ira Chinoy,2024-05 Winner of the Ray Hiebert History of Journalism Published Work Award The history of American elections changed profoundly on the night of November 4 1952 An outside the box approach to predicting winners from early returns with new tools computers was launched live and untested on the newest medium for news television Like exhibits in a freak show computers were referred to as electronic brains and mechanical monsters Yet this innovation would help fuel an obsession with numbers as a way of understanding and shaping politics It would engender controversy down to our own time And it would herald a future in which the public square would go digital The gamble was fueled by a crisis of credibility stemming from faulty election night forecasts four years earlier in 1948 combined with a lackluster presentation of returns What transpired in 1952 is a complex tale of responses to innovation which Ira Chinoy makes understandable via a surprising history of election nights as venues for rolling out new technologies refining methods of prediction and providing opportunities for news organizations to shine In Predicting the Winner Chinoy tells in detail for the first time the story of the 1952 election night a night with continuing implications for the way forward from the dramatic events of 2020 21 and for future election nights in the United States
