authoritative catalogue will greatly assist readers in finding the correct taxonomic name for any given family genus or species within each of the six arachnid orders treated. It contains a valuable summary of bibliographic information enabling readers to access the worldwide literature for these smaller orders. The catalogue presents full bibliographic data on each of the taxa named thus far, treating over 1600 species. It contains the most current classification system for each group, some of which have not been catalogued on a world scale for over 70 years. A summary of taxonomic changes is included. This quality reference will be of immense value to arachnologists, systematists, taxonomists, ecologists, and biodiversity professionals, especially those interested in tropical rainforest communities.

1st-15th meeting      *Antpittas and Gnateaters* Harold Greeney, 2018-07-12 This authoritative handbook, part of the Helm Identification Guide series, looks in detail at the beautiful antpittas. Elusive study organisms for ornithologists and highly prized additions to the birder's life list, the antpittas (Grallariidae) and gnateaters (Conopophagidae) are among the most poorly known Neotropical bird groups. This authoritative handbook is the first book dedicated solely to these two families, combining an exhaustive review of more than two centuries of literature with original observations by the author and many knowledgeable contributors. *Antpittas and Gnateaters* provides a thorough guide to the identification and ecology of these birds, with detailed maps accompanying the text. A series of superb plates illustrate most of the 156 recognized taxa, supplemented by more than 250 colour photographs. The immature plumages and natural history of many species are depicted for the first time. This book is the ultimate reference on these remarkable and beautiful birds and an indispensable addition to the libraries of researchers and birders for many years to come.

**Evolution and Environment in Tropical America** Jeremy B. C. Jackson, Ann F. Budd, Anthony G. Coates, 1996-12-15 How were the tropical Americas formed? This ambitious volume draws on extensive multidisciplinary research to develop new views of the geological formation of the isthmus linking North and South America and of the major environmental changes that reshaped the Neotropics to create its present-day marine and terrestrial ecosystems. Recent discoveries show that dramatic changes in climate and ocean circulation can occur very quickly and that ecological communities respond just as rapidly. Abrupt changes in the composition of fossil assemblages, formerly dismissed as artifacts of a poor fossil record, now are seen as accurate records of swift changes in the composition of ocean communities. The twenty-four contributors use current work in paleontology, geology, oceanography, anthropology, ecology, and evolution to paint this challenging portrait of rapid environmental and evolutionary change. Their conclusions argue for a revision of existing interpretations of the fossil record and the processes, including invading Eurasian peoples, that have produced it.
