Nyborg, María del Carmen Perrilliat, Marisol Montellano-Ballesteros, Sergio R.S. Cevallos-Ferriz, Sara A. Quiroz-Barroso, 2006-07-15 During the last few years the number of contributions to the Paleontology of Mexico has increased considerably Paleontological work in Mexico has been focused on providing important information for petroleum exploration and specific studies dealing with pollen foraminifera radiolaria dinoflagellates rudists and ammonites Often these reports were published only in local or regional journals and therefore not available to the scientific community at large The purpose of this book is to offer an updated review of the fossil groups from Mexico providing their significance to the stratigraphy tectonics sedimentology evolution and paleontology of Mexico whose study has proved to be relevant in stratigraphy tectonics sedimentology and evolution The fossil record of Mexico ranges from Precambrian to Pleistocene Almost every Mexican State has reported fossil localities with ongoing studies and potential for the discovery of new localities Even those localities that have been studied since the eighteen century such as the early Cretaceous San Juan Raya have recently reported new fossil groups Unfortunately much of the fossil reports from Mexico have been published in Spanish from local journals which represent a language barrier to the international community There is little doubt that the paleontological history of Mexico deserves to be known in other countries By making this book available to the international scientific community we hope that interest in the fossil record of Mexico will grow Geological Survey Bulletin ,1949

section summarizes the disheartening rate of habitat destruction which threatens to diminish this diversity In addition to the purely scientific value of this important work it provides the much needed basic data that will help conservation policymakers assess and respond to Mexico s ecological evolution *Paleontología mexicana* Universidad Nacional Autónoma de México.
