Fc Receptors And The Action Of Antibodies:

Fc Receptors and the Action of Antibodies Henry Metzger,1990-01 **Fc Mediated Activity of Antibodies** Jeffrey V. Ravetch,Falk Nimmerjahn,2019-09-03 This volume explores several aspects of how antibodies mediate their activity in vivo ranging from cancer immunotherapy to autoimmunity infection and vaccination Divided into seven chapters it provides in depth insights into how antibodies and especially the antibody fragment crystallizable Fc domain modulate immune responses and antibody activity The book begins by discussing evolutionary aspects of how the family of Fc receptors that are the key molecules for antibody activity evolved In turn it addresses the molecular and cellular pathways underlying IgG activity in cancer immunotherapy and focuses on how IgG glycosylation regulates IgG and IgE activity in autoimmunity allergy and infection In closing it presents strategies for developing novel antibody based vaccination approaches The book is intended for a very broad readership including graduate students postdocs and principal investigators with a basic grasp of immunology Fc-Mediated Antibody Functions and Fc-Receptor Polymorphism Guido Ferrari,Georgia Tomaras,R. Keith Reeves,Gabriella Scarlatti,2020-07-28 Fc-Mediated Antibody Functions and Fc-Receptor Polymorphism Volume II Guido Ferrari,R. Keith Reeves,Gabriella Scarlatti,Margaret E. Ackerman,Amy W. Chung,2023-05-29 *Antibody Fc* Margaret Ackerman,Falk Nimmerjahn,2013-08-06 Antibody Fc is the first single text to synthesize the literature on the mechanisms underlying the dramatic variability of antibodies to influence the immune response The book demonstrates the importance of the Fc domain including protective mechanisms effector cell types genetic data and variability in Fc domain function This volume is a critical single source reference for researchers in vaccine discovery immunologists microbiologists oncologists and protein engineers as well as graduate students in immunology and vaccinology Antibodies represent the correlate of protection for numerous vaccines and are the most rapidly growing class of drugs with applications ranging from cancer and infectious disease to autoimmunity Researchers have long understood the variable domain of antibodies which are responsible for antigen recognition and can provide protection by blocking the function of their target antigen However recent developments in our understanding of the protection mediated by antibodies have highlighted the critical nature of the antibody constant or Fc domain in the biological activity of antibodies The Fc domain allows antibodies to link the adaptive and innate immune systems providing specificity to a wide range of innate effector cells In addition they provide a feedback loop to regulate the character of the immune response via interactions with B cells and antigen presenting cells Clarifies the different mechanisms of IgG activity at the level of the different model systems used including human genetic mouse and in vitro Covers the role of antibodies in cancer infectious disease and autoimmunity and in the setting of monoclonal antibody therapy as well as naturally raised antibodies Color illustrations enhance explanations of the immune system Roles of Fc Receptors in Disease and Therapy Latha P. Ganesan,Mark S. Cragg,Gestur Vidarsson,2020-07-22 **Fc Receptors** Marc Daeron,Falk Nimmerjahn,2014-08-12 This volume provides a state of the art update on Fc Receptors

FcRs It is divided into five parts Part I Old and New FcRs deals with the long sought after Fc R and the recently discovered FCRL family and TRIM21 Part II FcR Signaling presents a computational model of Fc RI signaling novel calcium channels and the lipid phosphatase SHIP1 Part III FcR Biology addresses major physiological functions of FcRs their glycosylation how they induce and regulate both adaptive immune responses and inflammation especially in vivo FcR humanized mice and the multifaceted properties of FcRn Part IV FcRs and Disease discusses FcR polymorphism FcRs in rheumatoid arthritis and whether their FcRs make macaques good models for studying HIV infection In Part V FcRs and Therapeutic Antibodies the roles of various FcRs including Fc RIIB and Fc RI in the immunotherapy of cancer and autoimmune diseases using monoclonal antibodies and IVIg are highlighted All 18 chapters were written by respected experts in their fields offering an invaluable reference source for scientists and clinicians interested in FcRs and how to better master antibodies for therapeutic purposes

Molecular and Cellular Mechanisms of Antibody Activity Falk Nimmerjahn, 2013-05-22 This book focuses on the function of antibodies in vivo Recent years have seen an exponential growth in knowledge about the molecular and cellular mechanisms of antibody activity These new results dramatically changed our view of how antibodies function in vivo The importance of this class of molecules is demonstrated by the heightened susceptibility to infections of humans and mice with an altered capacity to generate pathogen specific antibody responses Thus the majority of our currently available vaccines such as vaccines against influenza measles and hepatitis focus on the generation of long lasting antibody responses Recent evidence from a variety of in vivo model systems and from human patient cohorts has highlighted the exclusive role of cellular Fc receptors for certain immunoglobulin isotypes and subclasses With the recent discovery of a human Fc receptor for IgM all different human immunoglobulin isotypes now have a cellular receptor providing a feedback mechanism and link between antibodies and the cellular components of the immune system Moreover it has become clear the complement and Fc receptor system are tightly connected and regulate each other to ensure a well balanced immune response Among the immunoglobulin isotypes IgG plays a very important protective role against microbial infections and also as a therapeutic agent to kill tumor cells or autoantibody producing B cells in autoimmune disease Transfer of our knowledge about the crucial function of Fc receptors has led to the production of a second generation of therapeutic antibodies with enhanced binding to this class of receptors Binding of antibodies to Fc receptors leads to the recruitment of the potent pro inflammatory effector functions of cells from the innate immune system Hence Fc receptors link the innate and adaptive immune system emphasizing the importance of both arms of the immune system and their crosstalk during anti microbial immune responses Besides this pro inflammatory activity immunoglobulin G IgG molecules are long known to also have an anti inflammatory function This is demonstrated by the use of high dose intravenous immunoglobulins as a therapeutic agent in many human autoimmune diseases During the past five years several new insights into the molecular and cellular pathways of this anti inflammatory activity were gained radically changing our view of IgG function in vivo Several lines of

evidence suggest that the sugar moiety attached to the IgG molecule is responsible for these opposing activities and may be seen as a molecular switch enabling the immune system to change IgG function from a pro to an anti inflammatory activity There is convincing evidence in mice and humans that aberrant IgG glycosylation could be an important new pathway for understanding the impaired antibody activity during autoimmune disease Besides this tremendous increase in basic knowledge about factors influencing immunoglobulin activity the book will also provide insights into how these new insights might help to generate novel therapeutic approaches to enhance IgG activity for tumor therapy on the one hand and how to block the self destructive activity of IgG autoantibodies during autoimmune disease on the other hand

Structure and Function of Antibodies Roy Jefferis,Koichi Kato,William R. (Bill) Strohl,2021-02-05 This book provides a detailed description of all kinds of therapeutic antibodies including IgGs IgAs IgEs and IgMs bispecific antibodies chimeric antigen receptor antibodies and antibody fragments Details about how each of these antibodies interact with their ligands the immune system and their targets are provided Additionally this book delves into the details of antibody Fc and variable chain structures and how subtle changes in structure charge flexibility post translational modification and the ability to bind to natural antibody ligands can result in a significant impact on antibody activity and functionality Finally the book explains the critical quality attributes of modern therapeutic antibodies and how to ensure that antibodies entering development have the best possible chance of success

Antibody Engineering J. D. Capra,1996 The last decade has witnessed remarkable developments in antibody research and its therapeutic applications With the methods of molecular biology it is now possible to manipulate the specificities and activities of antibody molecules to generate an almost limitless array of structures for both basic investigations and the clinical setting The contributions to this volume cover all three domains of the antibody the variable regions the relatively neglected but crucial hinge and the constant region These studies provide critical structural and functional information about antibodies while also pointing the way to the construction of molecules with enhanced or even novel properties Bringing together major experts on antibody engineering this book is highly recommended to faculty postdoctoral fellows and graduate students in molecular biology microbiology immunology cancer research and genetics

International Cell Biology 1980-1981 Hans G. Schweiger, NA International Congress on Cell Biology, 2013-12-14 In September 1976 the International Federation for Cell Biology held its first congress in Boston On this occasion Berlin was chosen as the site for the next congress This meant an acknowledgement and at the same time a heavy burden for the still young European Cell Biology Organization which represents a junction of European societies and groups for cell biology In practical terms this meant that the members of the young and compared to the American Society for Cell Biology small German Society for Cell Biology had to do a good deal of the organizing of the Cell Biology Congress This is an opportunity for me as Chairman of the Organizing Committee and also on behalf of the German Society for Cell Biology to express my gratitude to all those who have actively participated in the preparations for this Cell Biology Congress The success of the Congress in Berlin was to a significant extent due to their work In particular I would like to especially thank the Secretary General of ECBO Werner Franke Heidelberg as well as the Chairman of the Local Organizing Committee Peter Giesbrecht Berlin for the excellent job they did The Congress in Berlin proved to be significantly larger than that in Boston in 1976 The number of abstracts increased from 1200 to more than 1800 They have been published in the European Journal of Cell Biology In a similar way the number of symposia and workshops expanded
