

Generalized figure for the fate and transport of 1,4-dioxane: In the absence of water or soil moisture 1,4-dioxane volatilizes (1) to the atmosphere where it is rapidly photodegraded (2). In the presence of water advective flow drives 1,4-dioxane into groundwater systems or plants via uptake through plant root systems (3a) with little retardation from sorption into organic matter (3b). In the saturated zone, attenuation of 1,4-dioxane occurs via dilution and dispersion (4), matrix diffusion (5), or aerobic biodegradation mediated by microbes (6). Transport of undegraded 1,4-dioxane to surface water may occur through groundwater-surface water interfaces (7).
