the development of the brain and retina possibly leading to abnormalities in cognitive and visual function Considerable multidisciplinary research has been carried out to investigate this proposition Diets free from LCPUFAs have been compared with supplemented formulae or with breast milk The conclusions from this research were critically examined by a group of leading paediatricians nutritionists experts in visual science and developmental behavioural scientists at a Dobbing Workshop held in the United States in late February 1997 Each of the Chapters was precirculated to the whole group commented on before the Workshop and then exhaustively discussed The Chapters and Commentaries which are published here have therefore undergone a more extensive peer review process than is usually the case

Natural Products and Neuroprotection Cristina Angeloni, David Vauzour, 2020-06-17 Neurodegenerative diseases including Alzheimer's Parkinson's Huntington's and amyotrophic lateral sclerosis are the most common pathologies of the central nervous system currently without a cure They share common molecular and cellular characteristics including protein misfolding mitochondrial dysfunction glutamate toxicity dysregulation of calcium homeostasis oxidative stress inflammation and ageing which contribute to neuronal death Efforts to treat these diseases are often limited by their multifactorial etiology Natural products thanks to their multitarget activities are considered promising alternatives for the treatment of neurodegeneration This book deals with two different forms of natural products extracts and isolated compounds The study of the bioactivity of the extracts is extremely important as many studies have demonstrated the synergistic effect of the combination of different natural products On the other hand the investigation of the activity of specifically isolated natural products can be also important to understand their cellular and molecular mechanisms and to define the specific bioactive components in extracts or foods This book can be considered an important contribution to knowledge of the neuroprotective effect of natural products and presents a great deal of information related to both the benefits but also the limitations of their use in counteracting neurodegeneration

Encyclopedia of Fish Physiology, 2011-06-01 Fish form an extremely diverse group of vertebrates At a conservative estimate at least 40% of the world's vertebrates are fish On the one hand they are united by their adaptations to an aquatic environment and on the other they show a variety of adaptations to differing environmental conditions often to extremes of temperature salinity oxygen level and water chemistry They exhibit an array of behavioural and reproductive systems Interesting in their own right this suite of adaptive physiologies provides many model systems for both comparative

vertebrate and human physiologists This four volume encyclopedia covers the diversity of fish physiology in over 300 articles and provides entry level information for students and summary overviews for researchers alike Broadly organised into four themes articles cover Functional Thematic and Phylogenetic Physiology and Fish Genomics Functional articles address the traditional aspects of fish physiology that are common to all areas of vertebrate physiology including Reproduction Respiration Neural Sensory Central Effector Endocrinology Renal Cardiovascular Acid base Balance Osmoregulation Ionoregulation Digestion Metabolism Locomotion and so on Thematic Physiology articles are carefully selected and fewer in number They provide a level of integration that goes beyond the coverage in the Functional Physiology topics and include discussions of Toxicology Air breathing Migrations Temperature Endothermy etc Phylogenetic Physiology articles bring together information that bridges the physiology of certain groupings of fishes where the knowledge base has a sufficient depth and breadth and include articles on Ancient Fishes Tunas Sharks etc Genomics articles describe the underlying genetic component of fish physiology and high light their suitability and use as model organisms for the study of disease stress and physiological adaptations and reactions to external conditions Winner of a 2011 PROSE Award Honorable Mention for Multivolume Science Reference from the Association of American Publishers The definitive encyclopedia for the field of fish physiology Three volumes which comprehensively cover the entire field in over 300 entries written by experts Detailed coverage of basic functional physiology of fishes physiological themes in fish biology and comparative physiology amongst taxonomic Groups Describes the genomic bases of fish physiology and biology and the use of fish as model organisms in human physiological research Includes a glossary of terms
