Non-Patient and Third Party Claims Rachael Mulheron, 2016-04-29 Healthcare professionals face an increasing threat of litigation from parties whom they have never met in their daily medical practice and who look nothing like the traditional patient The so called non patient may take many forms for example a person who is injured or killed by a mentally ill physically disabled or diseased patient a wrongfully accused parent in a child neglect abuse case or a local authority which is put to the expense of caring for a negligently treated patient This book explores the legal principles and conundrums which arise when determining a healthcare professional's liability in negligence towards a wide variety of non patients The topic is assuming increasing legal importance and relevance given the potential for many non patient claims to give rise to class actions litigation and in light of the legislative and human rights interventions and the frequent appellate judicial consideration which non patient claims have attracted in recent times The aim of the book is to have utility for both legal and medical professionals for academics and students of comparative medical negligence and tort law and for law reformers who may be interested in adopting certain features of statutory models elsewhere which pertain to some non patient claims such as those based upon Good Samaritan conduct Important parallels or counterpoints from other common law jurisdictions in which courts and commentators have grappled with the legal complexities of non patient claims are also discussed and critically analyzed **Scaling Up Treatment for the Global AIDS Pandemic** Institute of Medicine, Board on Global Health, Committee on Examining the Probable Consequences of Alternative Patterns of Widespread Antiretroviral Drug Use in Resource-Constrained Settings, 2004-11-24 An estimated forty million people carry the human immunodeficiency virus HIV and five million more become newly infected annually In recent years many HIV infected patients in wealthy nations have enjoyed significantly longer good quality lives as a result of antiretroviral therapy ART However most infected individuals live in the poorest regions of the world where ART is virtually nonexistent The consequent death toll in these regions especially sub Saharan Africa is begetting economic and social collapse To inform the multiple efforts underway to deploy antiretroviral drugs in resource poor settings the Institute of Medicine committee was asked to conduct an independent review and assessment of rapid scale up ART programs It was also asked to identify the components of effective implementation programs At the heart of the committee's report lie five imperatives Immediately introduce and scale up ART programs in resource poor settings Devise strategies to ensure high levels of patient adherence to complicated treatment regimens Rapidly address human resource shortages to avoid the failure of program implementation Continuously monitor and evaluate the programs to form the most effective guidelines and treatment regimens for each population Prepare to sustain ART for decades *Counselling for Maternal and Newborn Health Care* World Health Organization, 2010 The main aim of
