Ulrich, MATERIALS RESEARCH SOCIETY PITTSBURGH PA., 1986 The symposium explored the materials science aspects of electronic packaging Electronic packaging has come to include interconnection technology which involves aspects of on chip processing such as deposited dielectrics interconnects and encapsulants as well as chip carrier and printed circuit board fabrication A very broad range of materials was discussed at the symposium including metals polymers and ceramics The interfaces between various materials was a major concern especially the role of interfaces in adhesion Ceramics are in widespread use as chip carriers and for this use there is a need for low dielectric constant materials for controlled thermal properties and for ceramics with small shrinkage and good dimensional stability during firing Methods were reported for making porous ceramics to reduce the dielectric constant Interfaces between ceramics and glasses and between glasses and polymers play an important role in the properties of chip carriers and printed circuit boards Several authors reported on the processing and properties of polyimides which are used extensively for on chip deposited dielectric layers *Electronic Packaging Materials Science IV: Ralph Jaccodine, Kenneth A.
