

# ELECTROSHOCK: THE CASE AGAINST

BY JAMES M. HANCOCK, M.D.

Electroshock therapy is a procedure in which a patient is put under general anesthesia and receives a series of electric shocks to the head.

The procedure is used to treat severe mental illness, such as schizophrenia, bipolar disorder, and major depression.

It is also used to treat some cases of epilepsy and Tourette's syndrome.

Electroshock therapy is a controversial procedure, and its use has declined significantly in recent years.

Some people believe that it is a humane and effective way to treat mental illness, while others believe that it is a cruel and inhumane practice.

There is a lot of controversy surrounding electroshock therapy, and many people are concerned about its safety and effectiveness.
