Elementary Geometry from an Advanced Standpoint Edwin E. Moise, 1963 *Handbook of Mathematics for Engineers and Scientists* Andrei D. Polyanin, Alexander V. Manzhirov, 2006-11-27 Covering the main fields of mathematics this handbook focuses on the methods used for obtaining solutions of various classes of mathematical equations that underlie the mathematical modeling of numerous phenomena and processes in science and technology The authors describe formulas methods equations and solutions that are frequently used in scientific and engineering applications and present classical as well as newer solution methods for various mathematical equations The book supplies numerous examples graphs figures and diagrams and contains many results in tabular form including finite sums and series and exact solutions of differential integral and functional equations

Poincare's Prize George G. Szpiro, 2008-07-29 The amazing story of one of the greatest math problems of all time and the reclusive genius who solved it In the tradition of Fermat's Enigma and Prime Obsession George Szpiro brings to life the giants of mathematics who struggled to prove a theorem for a century and the mysterious man from St Petersburg Grigory Perelman who finally accomplished the impossible In 1904 Henri Poincaré developed the Poincaré Conjecture an attempt to understand higher dimensional space and possibly the shape of the universe The problem was he couldn't prove it A century later it was named a Millennium Prize problem one of the seven hardest problems we can imagine Now this holy grail of mathematics has been found Accessibly interweaving history and math Szpiro captures the passion frustration and excitement of the hunt and provides a fascinating portrait of a contemporary noble genius

Elementary Mathematics from an Advanced Standpoint Felix Klein, 2007-06-01 Discusses calculating with natural

numbers the first extension of the notion of number special properties of integers and complex numbers algebra related subjects such as real equations with real unknowns and equations in the field of complex quantities Also explores elements of analysis with discussions of logarithmic and exponential functions the goniometric functions and infinitesimal calculus 1932 edition 125 figures [Leibniz on the Parallel Postulate and the Foundations of Geometry](#) Vincenzo De Risi,2016-01-28 This book offers a general introduction to the geometrical studies of Gottfried Wilhelm Leibniz 1646 1716 and his mathematical epistemology In particular it focuses on his theory of parallel lines and his attempts to prove the famous Parallel Postulate Furthermore it explains the role that Leibniz s work played in the development of non Euclidean geometry The first part is an overview of his epistemology of geometry and a few of his geometrical findings which puts them in the context of the seventeenth century studies on the foundations of geometry It also provides a detailed mathematical and philosophical commentary on his writings on the theory of parallels and discusses how they were received in the eighteenth century as well as their relevance for the non Euclidean revolution in mathematics The second part offers a collection of Leibniz s essays on the theory of parallels and an English translation of them While a few of these papers have already been published in Latin in the standard Leibniz editions most of them are transcribed from Leibniz s manuscripts written in Hannover and published here for the first time The book provides new material on the history of non Euclidean geometry stressing the previously neglected role of Leibniz in these developments This volume will be of interest to historians in mathematics philosophy or logic as well as mathematicians interested in non Euclidean geometry *A Concise Handbook of Mathematics, Physics, and Engineering Sciences* Andrei D. Polyanin,Alexei Chernoutsan,2010-10-18 A Concise Handbook of Mathematics Physics and Engineering Sciences takes a practical approach to the basic notions formulas equations problems theorems methods and laws that most frequently occur in scientific and engineering applications and university education The authors pay special attention to issues that many engineers and students **Continuous Symmetry** William H. Barker,Roger Howe,2007 The fundamental idea of geometry is that of symmetry With that principle as the starting point Barker and Howe begin an insightful and rewarding study of Euclidean geometry The primary focus of the book is on transformations of the plane The transformational point of view provides both a path for deeper understanding of traditional synthetic geometry and tools for providing proofs that spring from a consistent point of view As a result proofs become more comprehensible as techniques can be used and reused in similar settings The approach to the material is very concrete with complete explanations of all the important ideas including foundational background The discussions of the nine point circle and wallpaper groups are particular examples of how the strength of the transformational point of view and the care of the authors exposition combine to give a remarkable presentation of topics in geometry This text is for a one semester undergraduate course on geometry It is richly illustrated and contains hundreds of exercises **Elementary Geometry from an Advanced Viewpoint** Edwin E. Moise,1963 [Book Catalog of the Library and Information Services Division: Subject index](#) Environmental Science

Information Center. Library and Information Services Division,1977 **Book catalog of the Library and Information Services Division** Environmental Science Information Center. Library and Information Services Division,1977 **The Non-Euclidean Revolution** Richard J. Trudeau,2009-06-08 Richard Trudeau confronts the fundamental question of truth and its representation through mathematical models in The Non Euclidean Revolution First the author analyzes geometry in its historical and philosophical setting second he examines a revolution every bit as significant as the Copernican revolution in astronomy and the Darwinian revolution in biology third on the most speculative level he questions the possibility of absolute knowledge of the world A portion of the book won the P lya Prize a distinguished award from the Mathematical Association of America the author in this remarkable book describes in an incomparable way the fascinating path taken by the geometry of the plane in its historical evolution from antiquity up to the discovery of non Euclidean geometry This non Euclidean revolution in all its aspects is described very strikingly here Many illustrations and some amusing sketches complement the very vividly written text Mathematical Reviews **Outline Course of Pure Mathematics** A. F. Horadam,2014-05-16 Outline Course of Pure Mathematics presents a unified treatment of the algebra geometry and calculus that are considered fundamental for the foundation of undergraduate mathematics This book discusses several topics including elementary treatments of the real number system simple harmonic motion Hooke s law parabolic motion under gravity sequences and series polynomials binomial theorem and theory of probability Organized into 23 chapters this book begins with an overview of the fundamental concepts of differential and integral calculus which are complementary processes for solving problems of the physical world This text then explains the concept of the inverse of a function that is a natural complement of the function concept and introduces a convenient notation Other chapters illustrate the concepts of continuity and discontinuity at the origin This book discusses as well the significance of logarithm and exponential functions in scientific and technological contexts This book is a valuable resource for undergraduates and advanced secondary school students **Volume 2: Cases and Perspectives** M. Kathleen Heid,Glendon W. Blume,2008-07-01 Published in Co operation with the National Council of Teacher of Mathematics According to NCTM s Principles and Standards for School Mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The second volume has a dual focus cases and perspectives It features descriptive cases that provide accounts of the development of technology intensive curriculum and tools In these cases the writers describe and analyze various roles that research played in their development work and ways in which research curriculum development and tool development can inform each other These thoughtful descriptions and analyses provide documentation of how this process

can and does occur The remaining chapters in the second volume address research related issues and perspectives on the use of technology in the teaching and learning of mathematics The lessons learned from the research presented in these volumes are lessons about teaching and learning that can be applied more broadly than solely in technological settings

Lobachevski Illuminated Seth Braver, 2011-12-31 Recipient of the Mathematical Association of America's Beckenbach Book Prize in 2015 Lobachevski Illuminated provides an historical introduction to non Euclidean geometry Within its pages readers will be guided step by step through a new translation of Lobachevski's groundbreaking book The Theory of Parallels Extensive commentary situates Lobachevski's work in its mathematical historical and philosophical context thus granting readers a vision of the mysterious and beautiful world of non Euclidean geometry as seen through the eyes of one of its discoverers Although Lobachevski's 170 year old text is challenging to read on its own Seth Braver's carefully arranged illuminations render this classic accessible to any modern reader student professional or layman undaunted by high school mathematics

A Course in Modern Geometries Judith N. Cederberg, 2013-03-09 A Course in Modern Geometries is designed for a junior senior level course for mathematics majors including those who plan to teach in secondary school Chapter 1 presents several finite geometries in an axiomatic framework Chapter 2 continues the synthetic approach as it introduces Euclid's geometry and ideas of non Euclidean geometry In Chapter 3 a new introduction to symmetry and hands on explorations of isometries precedes the extensive analytic treatment of isometries similarities and affinities A new concluding section explores isometries of space Chapter 4 presents plane projective geometry both synthetically and analytically The extensive use of matrix representations of groups of transformations in Chapters 3 4 reinforces ideas from linear algebra and serves as excellent preparation for a course in abstract algebra The new Chapter 5 uses a descriptive and exploratory approach to introduce chaos theory and fractal geometry stressing the self similarity of fractals and their generation by transformations from Chapter 3 Each chapter includes a list of suggested resources for applications or related topics in areas such as art and history The second edition also includes pointers to the web location of author developed guides for dynamic software explorations of the Poincaré model isometries projectivities conics and fractals Parallel versions of these explorations are available for Cabri Geometry and Geometer's Sketchpad Judith N Cederberg is an associate professor of mathematics at St Olaf College in Minnesota
