

The background of the entire slide is a dramatic, dark sky filled with heavy, dark clouds. Several bright, jagged lightning bolts are visible, striking downwards from the clouds. The overall color palette is dark, with shades of brown, grey, and black, punctuated by the bright white and yellow of the lightning.

Excerpt from *A Short Course in Elementary Meteorology*: This unimposing little book is a remarkable one for it marks an epoch; there are numerous books on elementary meteorology, but this is the first which has been written by a British teacher for a class of students who are learning meteorology as a qualification for their profession. The British Empire has produced some of the world's foremost meteorologists: Hailey Beaufort, Abercromby, Blanford, Eliot, and Shaw, to mention only a few; but until recently no one but a few specialists thought it worth his while to make a serious study of meteorology. But things have now changed; for the war taught us the importance of meteorology in practical life, and the aviator has arrived with his active life in the region of nature which we meteorologists have only looked into from below. Meteorology, from being the hobby of a few and the life's work of a still smaller number of despised official weather prophets, has come into its own, and not only the aviator but the general public is asking for the means to study this neglected branch of science. It is therefore with the greatest pleasure that I welcome this little book and trust that it is only the first of a long series for meteorology is still in its infancy and as it develops, text books must be rewritten or they will become worse than useless. This book has been written by a practical meteorologist for practical aviators and by a teacher for his students. This is an ideal combination and the product is not disappointing. I wish, however, to warn the student that there are many unsolved problems in meteorology and therefore he should not be satisfied with any explanation or theory which the book contains. He has been given the best explanations.

Elementary Meteorology William Morris Davis, 2015-06-15 Excerpt from Elementary Meteorology Those who are already acquainted with the science of meteorology will need no words of mine to show that the greatest share of whatever value this book may contain comes from my having studied and followed the work of the late Professor William Ferrel of Washington To his remarkable insight and ingenious analysis we owe the best part of the understanding of general atmospheric processes that has yet been reached Those who here first come to know something of the science of the atmosphere and who are perhaps thus brought to desire further acquaintance with it should not fail to study Ferrel's Popular Treatise on the Winds in which his more mathematical essays are reduced to a simpler form Yet after Ferrel an almost equal indebtedness must be acknowledged to Professor Julius Hann of Vienna from whose broad and accurate studies I have found assistance at every turn His *Klimatologie* the standard work of the kind and his numerous special articles have furnished me with much information as well as with many well defined examples of meteorological conditions and processes The names of many other meteorologists to whom acknowledgment is due come to mind while revising the pages of this book which presents the condensed results of my reading observing and teaching during the last fifteen years Some of these names are mentioned on the appropriate pages but in general I have not attempted to make explicit reference to the sources of information that have been consulted believing that in a school book as this is primarily intended to be such references are not of much value especially as they too commonly lead to sources of information inaccessible in school libraries A personal acknowledgment must however be made here to Mr H H Clayton of Blue Hill Observatory for assistance in connection with the chapter on clouds to Mr Alexander McAdie of the Weather Bureau in Washington for his advice in the sections on atmospheric electricity and to Mr R DeC Ward successor of Professor Harrington as editor of the *American Meteorological Journal* for many suggestions in connection with the teaching of meteorology in which he has for some years been associated with me in Harvard College About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the
