Peter Rich, Yvonne Dean, 2012-10-02 The construction of buildings is learnt through experience and the inheritance of a tradition in forming buildings over several thousand years Successful construction learns from this experience which becomes embodied in principles of application Though materials and techniques change various elements have to perform the same function Principles of Element Design identifies all the relevant elements and then breaks these elements down into all their basic constituents making it possible for students to fully understand the given theory and principles behind each part As all building projects are subject to guidance through the Building Regulations and British Standards this book gives an immediate reference back to relevant information to help practitioners and contractors identify key documents needed Yvonne Dean B A Hons B A Open RIBA an architect energy consultant and materials technologist She also has 15 years experience as a lecturer travels widely and is a guest lecturer at many universities She pioneered an access course for Women into Architecture and Building which has been used as a template by others and has been instrumental in helping to change the teaching of technology for architects and designers Peter Rich AA Dipl Hons Architect started his career with 14 years experience as a qualified architectural technician He then joined the AA School of Architecture working with Bill Allen and John Bickerdike after his graduation later becoming a partner of Bickerdike Allen Rich and Partners He also taught building construction at the Bartlett School of Architecture University College London and architectural design at the Polytechnic of North London He now acts as a Consultant
