Mathematical Linguistics Andras Kornai, 2007-12-16 Mathematical Linguistics introduces the mathematical foundations of linguistics to computer scientists engineers and mathematicians interested in natural language processing The book presents linguistics as a cumulative body of knowledge from the ground up no prior knowledge of linguistics is assumed Previous textbooks in this area concentrate on syntax and semantics this comprehensive volume covers an extremely rich array of topics also including phonology and morphology probabilistic approaches complexity learnability and the analysis of speech and handwriting As the first textbook of its kind this book is useful for those in information science information retrieval and extraction search engines and in natural language technologies speech recognition optical character recognition HCI Exercises suitable for the advanced reader are included as well as suggestions for further reading and an extensive bibliography      **Current Issues in Mathematical Linguistics** C. Martín-Vide, 2014-06-28 The present volume contains some selected topics of current interest around the world in the mathematical analysis of natural language The book is divided into four sections analytical algebraic models models from the theory of formal grammars and automata with interest mainly in syntax model theoretic concepts in semantics or pragmatics and a final section containing some applications in computational linguistics The varied perspectives illustrated in the book confirm that Mathematical Linguistics has finally introduced scientific methods into a previously fuzzy field through the use of mathematical reasoning The text will contribute to a fruitful convergence between linguists mathematicians logicians computer scientists cognitive scientists and others interested in the formal treatment of natural language and the research of its properties

Introduction of Elements of Mathematics to Linguistics Raïmond Genrikhovich Piotrovskiï, Mikhail Moiseevich Lesokhin, Kuz'ma Fedorovich Luk'iĭaĭnenkov, 1990      **NBS Technical Note** , 1963-07      **Automatic Documentation and Mathematical Linguistics** , 1999      A Bibliography of Foreign Developments in Machine Translation and Information Processing Josephine L. Walkowicz, 1963      **Linguistics for the Teacher** Joseph C. Mukalel, 2003 The book aims at introducing the language teacher in general and the teacher of English in particular to the field of linguistics that should necessarily form the basis of his own understanding of what language is and of his classroom practice generating from this knowledge An understanding of the nature of English as a language as such because essential for the teacher as he begins evolving adequate classroom methodology teaching techniques as well as the large variety of learning experiences that go into the making of what we call effective teaching His own treatment of the classroom situations largely depends on these linguistic specification that are provided to him by the linguist      *Quantification in Linguistics and Text Analysis* Emmerich Kelih, Ján Mačutek, Michaela Koščová, 2025-05-06 This volume contains the most important theoretical and methodological

works of Gabriel Altmann 1931-2019 He is the founder of a specific school of quantitative linguistics which focuses on the statistical analysis and interrelationship of linguistic features and characteristics His approach concentrates on the construction of a general theory of linguistics The theory is based on the relevance of linguistic laws Zipf's, Menzerath's and Piotrowski's and concepts of language as a self-regulating system In contrast to approaches where quantitative methods are used as standard methodological tools Altmann favours a holistic and epistemological view of problems of quantification of linguistic and textual phenomena

Encyclopedia of Linguistics Philipp Strazny, 2013-02-01 Utilizing a historical and international approach this valuable two volume resource makes even the more complex linguistic issues understandable for the non-specialized reader Containing over 500 alphabetically arranged entries and an expansive glossary by a team of international scholars the Encyclopedia of Linguistics explores the varied perspectives, figures and methodologies that make up the field

*Concept and Form, Volume 1* Peter Hallward, Knox Peden, 2012-12-12 Edited by a small group of students including Alain Badiou, Jacques Alain Miller and François Regnault at the École normale supérieure in Paris the Cahiers pour l'Analyse appeared in ten volumes between 1966 to 1969 The journal was conceived as a contribution to a philosophy based on the primacy of concepts and the rigor of logic and formalization as opposed to lived experience or the interpretation of meaning The Cahiers published landmark texts by the most influential thinkers of the day including Derrida, Foucault, Irigaray and Lacan and were soon recognized as one of the most significant and innovative philosophical projects of the time The two volumes of Concept and Form offer the first systematic presentation and assessment of the Cahiers' legacy in any language The first volume translates a selection of original Cahiers texts

**Papers in Structural and Transformational Linguistics** Zellig S. Harris, 2013-12-01

**Issues in Mathematical Linguistics** Carlos Martín-Vide, 1999-11-15 This brief collection of refereed papers approaches several technical as well as methodological aspects of the mathematical formalization of natural language particularly in syntax and in semantics Such kind of investigation is a prerequisite for the computational processing of language and is narrowly related to current developments in other disciplines namely theoretical computer science and mathematical logic The volume offers a coherent picture of recent research on the mathematics of language and may be of interest to a wide audience from linguists to mathematicians Detailed indexes of authors and topics provide an easy access to the contents

*Language and Mind* Noam Chomsky, 2006-01-12 Presents a collection of essays on language and mind This book brings the author's influential approach into the twenty-first century The chapters 1-6 present his early work on the nature and acquisition of language as a genetically endowed biological system the rules and principles of which we acquire as internalized knowledge

**The Oxford Handbook of Computational Linguistics** Ruslan Mitkov, 2022-06-02 Ruslan Mitkov's highly successful Oxford Handbook of Computational Linguistics has been substantially

revised and expanded in this second edition. Alongside updated accounts of the topics covered in the first edition it includes 17 new chapters on subjects such as semantic role labelling, text-to-speech synthesis, translation technology, opinion mining and sentiment analysis and the application of Natural Language Processing in educational and biomedical contexts among many others. The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics, the methods and resources used such as statistical modelling, machine learning and corpus annotation, key language processing tasks including text segmentation, anaphora resolution and speech recognition and the major applications of Natural Language Processing from machine translation to author profiling. The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries.

Linguistic Structures and Linguistic Laws Ferenc Kovacs, 1971-12-31. This monograph has as its objective to give a critical survey of the development of the theories concerning the essence, the function and the most characteristic determining features of language and to explore and evaluate the motive forces responsible for this development. The author explains mainly the progressive elements of the theoretical foundations and methodological procedures of different times and schools, trends and places them in the process which presents the course of development of linguistic theory as an organic whole. He deals in detail with the foreign, mainly American and Hungarian monographic publications based on so-called modern methodologies and in the light of the facts of language points out the theoretical, gnoseological, philosophical errors which of course are errors from the point of view of general linguistics too. He relies on a Marxist-based interpretation of the modern concept of natural and social law for the formulation of his own conception of linguistic law which includes also his own view of linguistics structures.
