Mindell, 2003-04-30 Today we associate the relationship between feedback control and computing with Norbert Wiener s 1948 formulation of cybernetics But the theoretical and practical foundations for cybernetics control engineering and digital computing were laid earlier between the two world wars In *Between Human and Machine Feedback Control and Computing before Cybernetics* David A Mindell shows how the modern sciences of systems emerged from disparate engineering cultures and their convergence during World War II Mindell examines four different arenas of control systems research in the United States between the world wars naval fire control the Sperry Gyroscope Company the Bell Telephone Laboratories and Vannevar Bush s laboratory at MIT Each of these institutional sites had unique technical problems organizational imperatives and working environments and each fostered a distinct engineering culture Each also developed technologies to represent the world in a machine At the beginning of World War II President Roosevelt established the National Defense Research Committee one division of which was devoted to control systems Mindell shows how the NDRC brought together representatives from the four pre war engineering cultures and how its projects synthesized conceptions of control communications and computing By the time Wiener articulated his vision these ideas were already suffusing through engineering They would profoundly influence the digital world As a new way to conceptualize the history of computing this book will be of great interest to historians of science technology and culture as well as computer scientists and theorists *Between Human and Machine Feedback Control and Computing before Cybernetics* **Routledge Revivals: Defence**

Industries (1988) Daniel Todd, 2018-02-01 Originally published in 1989 *Defence Industries* presents a worldwide survey of defence industries. It argues that modern weapon systems and electronic warfare have led to the transition of the military industrial enterprise into a multifaceted entity where electronics production is the key. It analyses the extent of defence industries showing that large portions of the aerospace shipbuilding motor vehicle and electronics industries are devoted to defence and discusses where the defence industries are located. It examines the differences in government policies contrasting the superpowers with newly industrialised countries.

The Physicists Daniel J. Kevles, 1995 This magnificent account of the coming of age of physics in America has been heralded as the best introduction to the history of science in the United States. Unsurpassed in its breadth and literary style, Daniel J. Kevles's account portrays the brilliant scientists who became a powerful force in bringing the world into a revolutionary new era. The book ranges widely as it links these exciting developments to the social, cultural and political changes that occurred from the post-Civil War years to the present. Throughout, Kevles keeps his eye on the central question of how an avowedly elitist enterprise grew and prospered in a democratic culture. In this new edition, the author has brought the story up to date by providing an extensive authoritative and colorful account of the Superconducting Super Collider from its origins in the international competition and intellectual needs of high energy particle physics through its establishment as a multibillion dollar project to its termination in 1993 as a result of angry opposition within the American physics community and Congress.

Technology's Storytellers John M. Staudenmaier, 1989-09-06 *Technology's Storytellers* documents the emergence of the history of technology as a coherent intellectual discipline. Based on an analysis of nearly 300 articles published in *Technology and Culture*, it proposes a mode of historical research as a communal rather than an individualistic endeavor, looking for patterns of consensus in the authors' choice of time periods, geographical locations and types of technology to study. It discusses the recurrent themes of the relationship between science and technology and the cultural ambience of technology and examines the extent to which historians are moving away from a once pervasive ideology of autonomous technological progress. Co-published with the Society for the History of Technology.

Inventing Accuracy Donald MacKenzie, 1993-01-29 Mackenzie has achieved a masterful synthesis of engrossing narrative, imaginative concepts, historical perspective and social concern. Donald MacKenzie follows one line of technology: strategic ballistic missile guidance through a succession of weapons systems to reveal the workings of a world that is neither awesome nor unstoppable. He uncovers the parameters, the pressures and the politics that make up the complex social construction of an equally complex technology.

A Different Universe Robert B Laughlin, 2008-07-31 A Nobel winning physicist argues that fundamental physical laws are found not in the world of atoms but in the macroscopic world around us In this age of superstring theories and Big Bang cosmology we re used to thinking of the unknown as impossibly distant from our everyday lives But in A Different Universe Nobel Laureate Robert Laughlin argues that the scientific frontier is right under our fingers Instead of looking for ultimate theories Laughlin considers the world of emergent properties meaning the properties such as the hardness and shape of a crystal that result from the organization of large numbers of atoms Laughlin shows us how the most fundamental laws of physics are in fact emergent A Different Universe is a truly mind bending book that shows us why everything we think about fundamental physical laws needs to change
