## **Elseviers Dictionary Of Weeds Of Western Europe Their Common Names And Importance:**

Elsevier's Dictionary of Weeds of Western Europe Gareth Williams, 1982 Weeds are usually known to farmers and the general public by their common names These names which are obviously easier to remember than their corresponding Latin or Linnean names are also frequently used in non scientific technical literature The fact that one species may have several common names while in some cases one name can apply to several species creates much ambiguity and confusion especially for those engaged in comparative studies or wishing to incorporate research done in other countries into their own work as well as for translators working in this field Although some European countries have attempted to solve this problem by producing official or semiofficial lists in which one common name is given for each species some of these lists have only a limited circulation while not all authorities from the different countries are in agreement over which species should be classified as weeds The Education Committee of the European Weed Research Society has gathered together national lists and attempted to remedy their deficiencies The result is this dictionary about 1 000 plant species have been classified giving the common name for each where it exists in all of the major European languages An additional feature of the dictionary is that the importance of particular species as weeds in the different regions of Europe has been estimated This multilingual dictionary should thus prove invaluable to all weed scientists botanists field ecologists translators of technical literature and those involved in the international agrochemical industry

**Dictionary of Weeds of Eastern Europe**, 1987 The common names of plants often cause difficulties for translators or those engaged in international studies Although used because they are easier for non scientists to remember than Latin or Linnean names one species may have several common names or one common name may be used for several species The problem is greater for weed scientists because the confusion over common names can lead to misunderstandings over control measures or the importance of weed species The proposal to list the common names of weeds in the European languages was made in 1972 by the Joint Panel of the Evaluation of Herbicides of the European Plant Protection Organisation and the work continued by the Working Group on Education and Training of the European Weed Research Society The result of their labours appears in two volumes The first is Elsevier s Dictionary of Weeds of Western Europe which was published in 1982 since when it has been a valuable source of information on the common names and importance of weed species in the countries of Western Europe Its companion volume is this new Dictionary of Weeds of Eastern Europe Although several books exist which give common names of plants there are none which have the range of languages covered in these two volumes or provide information on the importance of weed species The new dictionary will undoubtedly prove to be as welcome and as useful as its predecessor to translators weed crop protection scientists botanists ecologists and others
