*Applied Surrogate Endpoint Evaluation Methods with SAS and R* Ariel Alonso, Theophile Bigirimurame, Tomasz Burzykowski, Marc Buyse, Geert Molenberghs, Leacky Muchene, Nolen Joy Perualila, Ziv Shkedy, Wim Van der Elst, 2016-11-30 An important factor that affects the duration complexity and cost of a clinical trial is the endpoint

used to study the treatment's efficacy. When a true endpoint is difficult to use because of such factors as long follow up times or prohibitive cost, it is sometimes possible to use a surrogate endpoint that can be measured in a more convenient or cost effective way. This book focuses on the use of surrogate endpoint evaluation methods in practice using SAS and R.

**Understanding and Translating Chinese Martial Arts** Dan Jiao, Defeng Li, Lingwei Meng, Yuhong Peng, 2023-02-01

The present book features some introductory discussions on martial arts for the international audience and highlights in brief the complexities of translating the genre into English often from a comparative literature perspective. Martial arts, also known as Kungfu or Wushu, refer to different families of Chinese fighting styles over many centuries. Martial arts fiction or Wuxia literature is a unique genre that depicts adventures of martial artists in ancient China. Understanding martial arts and the Chinese culture and philosophy behind them creates an intriguing experience, particularly for non-Chinese readers. Translating the literature into English poses unparalleled challenges for translators not only because of the culture embedded in it but also the fascinating martial arts moves and captivating names of many characters therein.

**Statistical Methods for Survival Trial Design** Jianrong Wu, 2018-06-14. Statistical Methods for Survival Trial Design With Applications to Cancer Clinical Trials Using R provides a thorough presentation of the principles of designing and monitoring cancer clinical trials in which time to event is the primary endpoint. Traditional cancer trial designs with time to event endpoints are often limited to the exponential model or proportional hazards model. In practice, however, those model assumptions may not be satisfied for long term survival trials. This book is the first to cover comprehensively the many newly developed methodologies for survival trial design, including trial design under the Weibull survival models, extensions of the sample size calculations under the proportional hazard models, and trial design under mixture cure models, complex survival models, Cox regression models, and competing risk models. A general sequential procedure based on the sequential conditional probability ratio test is also implemented for survival trial monitoring. All methodologies are presented with sufficient detail for interested researchers or graduate students.
